A. Dual Bulb Halogen Headlamp Kit

The Dual Bulb Halogen Headlamp features advanced reflector optics and separate bulbs for high and low beam functions. The euro-inspired projector beam styling combines a state of the art look with a CAD designed faceted reflector bowl that is optimized for crisp patterns and light cut-off. The single upper bulb functions in low beam, and both upper and lower bulbs operate in high beam. The low beam setting produces a wide curb-to-curb light pattern, and the high beam adds focused light down the center of the lane without compromising width. Kit includes housing, 55-watt low beam halogen lamp, 35-watt high beam halogen lamp and all necessary mounting hardware. Does not meet ECE regulations.

67864-04A	Fits '94-later Electra Glide® and Road King® models, and '94-later FL Softail® models equipped with Chrome Headlight Nacelle Kit P/N 67907-96B. Kit includes mounting ring assembly.	**$164.95**

B. High Intensity Discharge (HID) Dual Bulb Headlamp Kit*

Cut through the darkness. The Harley-Davidson® High Intensity Discharge Headlamp Kit features a true HID (Xenon) low beam bulb that projects a curb-to-curb spread of "blue/white" light. Compared to the yellow light of a traditional Halogen bulb, the HID lamp produces a "Daylight Color Impression" that appears more natural to the user.

The HID Dual Bulb Headlamp assembly features unique advanced optics with separate low and high beam reflectors dedicated to focus the light for optimal illumination..The HID low beam is always illuminated, providing a wide pool of light, and the separate Halogen high beam bulb adds a focused shaft of light down the center of the lane.

The HID Dual Bulb Headlamp is not just a high-performance bulb, it's a complete lighting system. The system includes the HID bulb, an electronic starter, and a ballast system. The bulb is a complex tube that replaces the filament with arc-producing electrodes. The starter allows quick ignition of the arc, and the ballast converts incoming power to the high voltage needed to maintain the glow. The Xenon-filled HID bulb is resistant to vibration, and has a life expectancy of up to 10 times that of a Halogen bulb. The headlamp kit is DOT approved for use in all 50 states.

The complete Headlamp Kit includes the shock and vibration resistant housing, HID low beam bulb, halogen high beam bulb, starter, waterproof ballast, and all necessary wiring.

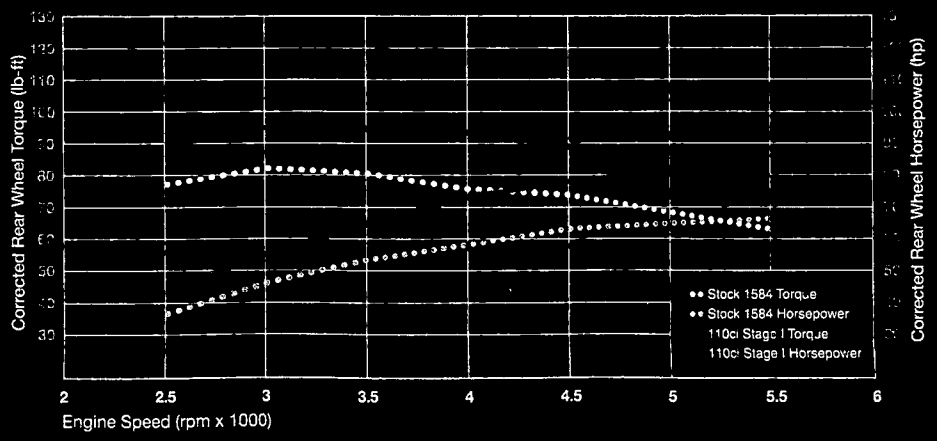
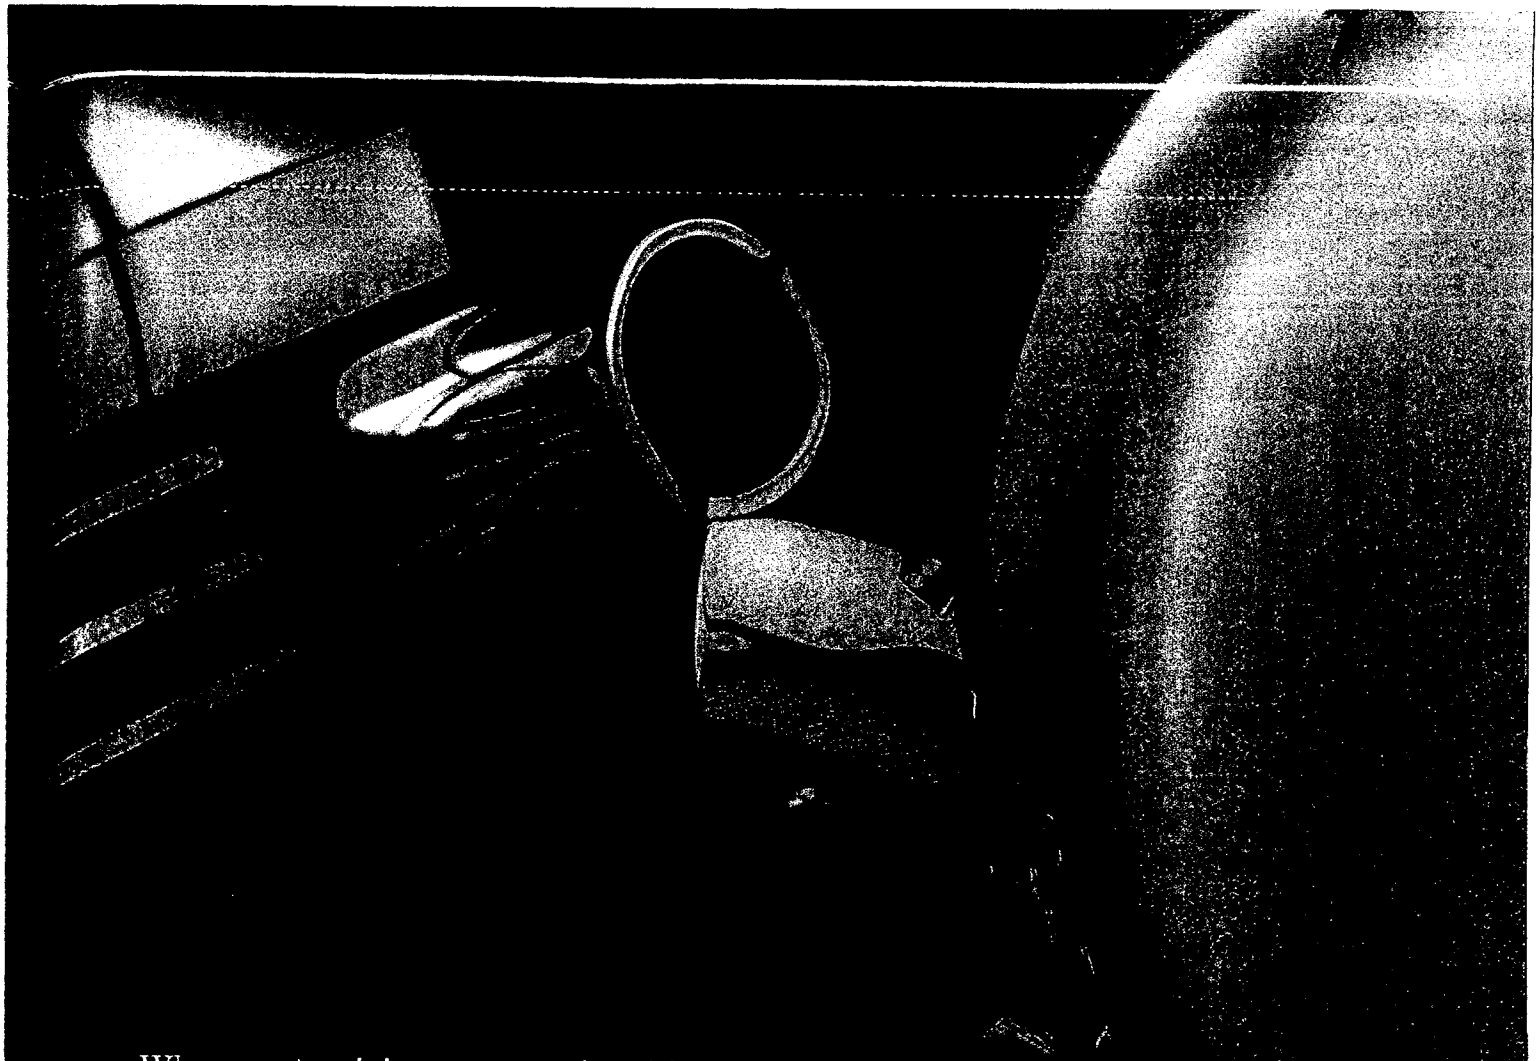
SCREAMIN' EAGLE®

The Dyno Chart

An invaluable tool in performance modification, the dyno chart can visually compare the performance characteristics of a stock engine with those of a modified engine — and can help you determine if a particular set-up will generate the power gains you're after. The horizontal axis indicates engine speed in RPM and the left and right vertical axis shows the amount of torque and horsepower produced. Comparing the stock and modified torque and horsepower curves can tell you how a configuration performs in a specific RPM range.





When customizing your engine, it's what's on the inside that counts. One-hundred percent street-legal, Screamin' Eagle® Performance Parts deliver the aggressive performance and sound you expect from a Harley-Davidson® motorcycle. Factory-tested Screamin' Eagle street-legal performance configurations are engineered to balance the demand for performance, reliability and responsibility.

Horsepower and Torque

While many judge a motorcycle's performance solely in terms of horsepower, torque is an equally important factor in the equation. In a nutshell, torque is the twisting force that gets your bike moving, while horsepower is the effort required to keep it moving — meaning that torque influences acceleration, while horsepower determines velocity.

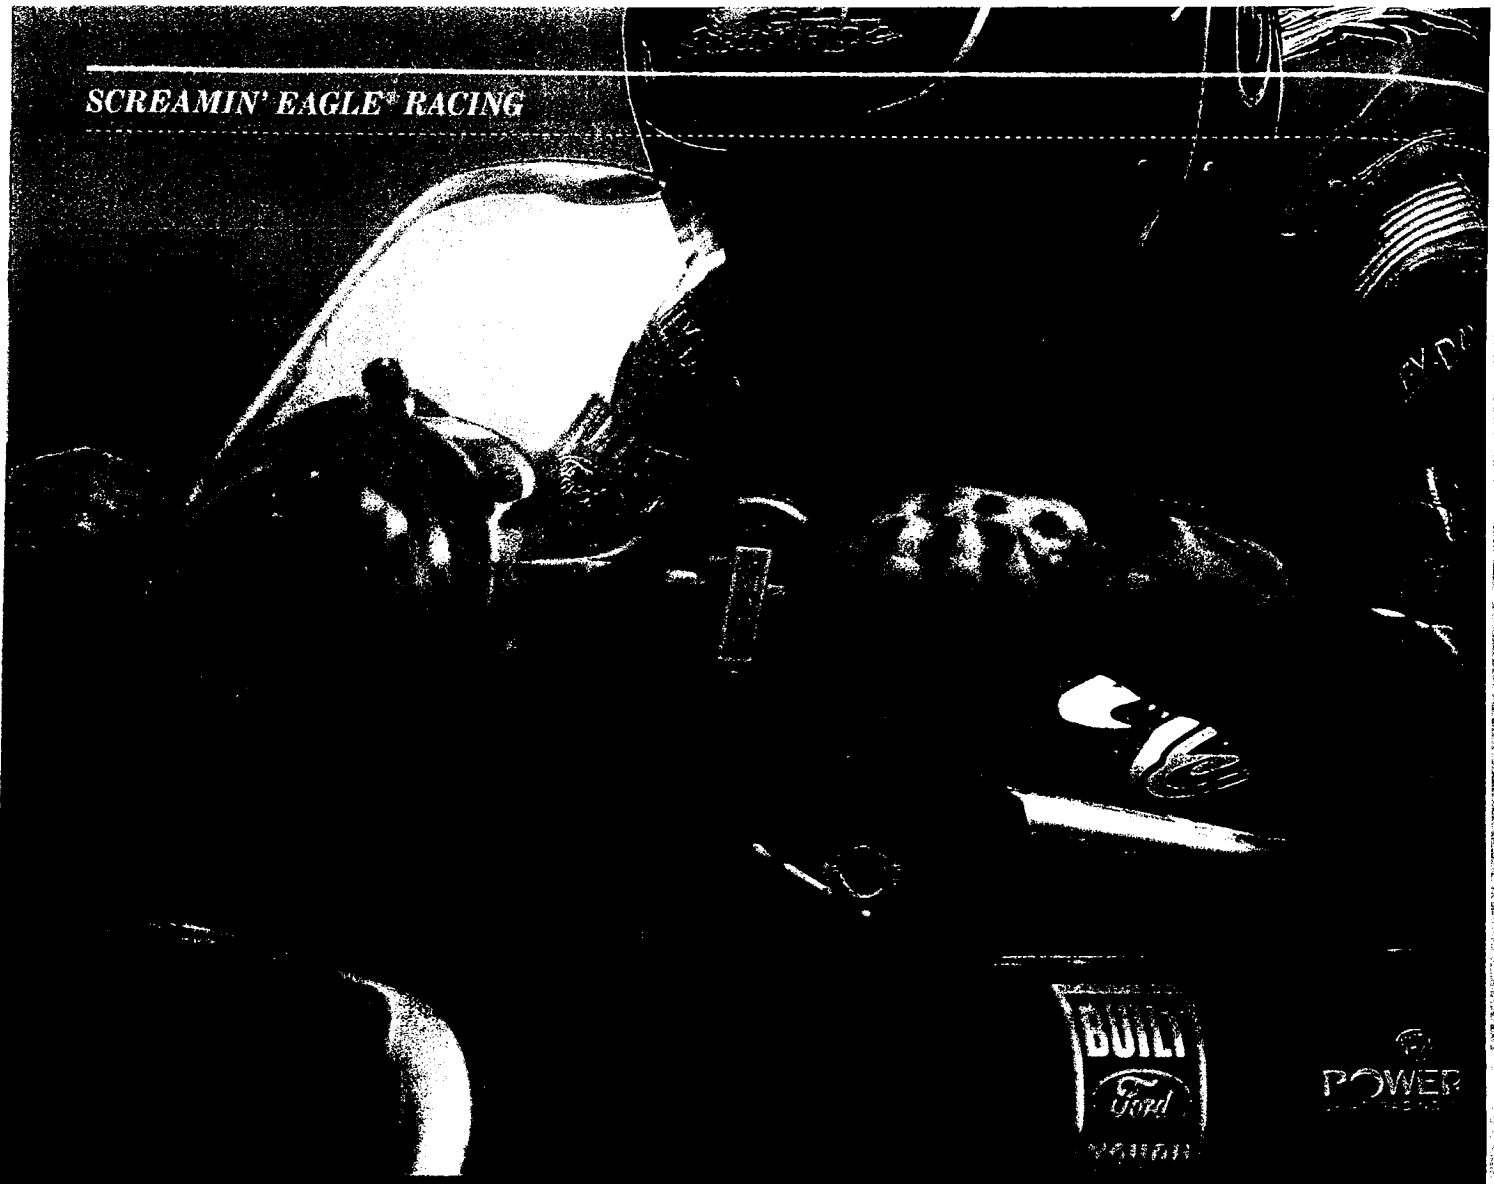
Your goal should be to reach the balance between horsepower and torque that most closely matches the performance you need.

Warranty and Caution

Harley-Davidson® has the engineering expertise, the sophisticated dyno lab and complete testing facilities to provide enthusiasts with a line of performance products designed to produce good, solid, reliable horsepower and torque. Engine related performance parts are intended for the experienced rider only.

Installation of Screamin' Eagle® products, and similar off-road or competition products from other manufacturers, except some street-legal offerings installed by authorized Harley® dealers, may void your H-D limited vehicle warranty. Installation of a California performance kit on a 49-state model motorcyle, or a 49-state performance kit onto a California model motorcycle will void manufacturers warranty, as it will not result in a street-legal configuration.

Harley-Davidson motorcycles modified with some Screamin' Eagle high-performance engine parts must not be used on public roads and in some cases may be restricted to closed-course competition.



A New Kind of Icon Harley-Davidson motorcycles are the official motorcycle of the National Hot Rod Association (NHRA®). To feel the power and excitement of professional drag racing, visit an NHRA event and experience the Harley-Davidson Acceleration Nation display. Exhibits feature the latest motorcycles, photo opportunities and a chance to race two specially-prepared V-Rod® motorcycles on a drag strip simulator.

Screamin' Eagle Racing Update

The Screamin' Eagle/Vance & Hines Racing Team continued to tear up the strip on its way to a third consecutive NHRA Pro Stock Motorcycle championship in 2006. Along the way, Andrew Hines earned three wins in five final rounds and two No. 1 qualifying positions. For 2007, Andrew is joined by rider Eddie Krawiec. Together, the Vance & Hines Team is racing to add a record-breaking fourth consecutive title to its legacy. Follow the Countdown to the Championship at NHRA.com.

We also love our trophies coated in dirt. In 2006, Kenny Coolbeth brought his go-for-broke style to the factory-sponsored Harley-Davidson racing team. On his way to winning his first career AMA GNC® Twins Flat Track Championship crown, Kenny earned a podium spot in six of the ten GNC Twins races. This could be the start of a long tradition as Kenny and the other members of the Wrecking Crew, Jared Mees, Bryan Smith and Joe Kopp race for the 2007 Championship.

Now all H-D enthusiasts can experience the adrenaline-pumping rush of drag racing action. For those who want to race, there are five Screamin' Eagle classes in our Screamin' Eagle-sponsored championship series, including the VRXSE Destroyer® class. For race fans, AHDRA events bring you all the action, up close and personal. Either way, don't miss a single tenth-of-a-second.

Once racing gets in your blood, there's no turning back. For those who want to raise the ante, put your skills to the test at the AHDRA Screamin' Eagle Las Vegas High Stakes Shootout. This race, and the $12,000 first-place prize, is open to all riders with a Harley-Davidson motorcycle. More details are avilable at www.ahdra.com.

Since 1914, winning races and breaking records has been an official part of the Harley-Davidson® legacy. Today, the Screamin' Eagle® name has become synonymous with the winner's circle. Wherever races are run, H-D riders are in the hunt for victory, and genuine Screamin' Eagle Pro Racing Parts help them get there. As part of our commitment to the sport, we support the AMA® and the AHDRA® organizations that give fans a chance to start racing.

Life Stages

Developed specifically for fuel-injected Harley-Davidson® motorcycles, Screamin' Eagle® Street-Legal Stage Kits eliminate the guesswork and the need for trial-and-error testing normally associated with engine modifications. Just define your performance goals, and pick the Stage Kit that gets you there.

Stage I Air Cleaner

Let It Breathe The first step to unleashing the power of a V-Twin motor is to let it breathe. The engine is an air pump, so the more air and fuel it can swallow, burn and exhale, the more power it produces. Adding a Stage I High Flow or Heavy Breather Air Cleaner and Street Performance Muffler combination produces a lot of "bang for the buck", and is a great place to start your performance build.

Stage I Big Bore

Open It Up Getting inside the engine and adding big bore cylinders and matching pistons is the fastest way to increase your bike's pulling power. When the torque curve peaks early and continues to pull all the way through the mid-range, you feel it. Big bore engines provide the power required to pass a slow moving camper or to pull a loaded bike up a long grade. Want even more? Step up to the Big Bore Stage II Kit and you add performance-matched cams for measurable increases in torque and horsepower.

Stage I Big Displacement

Get It All There's no substitute for cubic inches. Screamin' Eagle® 110 kits for Twin Cam 96 models and 103 kits for Twin Cam 88 models deliver hard-hitting Street Legal performance with proven reliability. Original Equipment on the Harley-Davidson® Screamin' Eagle CVO motorcycles, these Stage I Kits feature system-matched cylinders, heads, pistons, cams and ECM calibrations for demonstrated performance.

CAUTION ICONS:

Go Light These Screamin' Eagle products are 50-state street-legal for sale and use on all vehicles, including those that are pollution controlled.

Stophand Harley-Davidson motorcycles modified with some performance engine parts must not be used on public roads and in some cases may be restricted to closed-course competition. Those performance parts identified with a stophand symbol are U.S. EPA legal, but are NOT legal for sale or use in California on pollution-controlled motor vehicles. California guidelines on tampering can also lead to substantial fines and penalties.

California These Screamin' Eagle products are street legal for sale and use on pollution controlled vehicles in the state of California.

A. Screamin' Eagle® 6-Speed Transmission and Gear Set

Now available with your choice of Hydraulic or Cable Clutch Release. Add a Screamin' Eagle 6-Speed Transmission to your Custom Vehicle Operations (CVO) motorcycle with Original Equipment hydraulic clutch, or any models equipped with Harley-Davidson® accessory hydraulic clutch system.

Designed from the ground up, the Screamin' Eagle transmission incorporates many of the best Original Equipment features, like late-style shifting mechanism and a newly designed "shift ring" system to make this the smoothest shifting Harley-Davidson® transmission available. The "shift ring" system is similar to the system used in the VRSC transmission, and it slides on the shafts to mate into the gears. This eliminates sliding heavy gears to accomplish the shift, and results in smooth, precise and light effort shifting. Sixth gear is a true overdrive, at a .89:1 ratio, and the first five gears mimic today's proven 5-speed ratios. The overdrive feature allows you to run a lower engine RPM in sixth gear, at any given road speed. Lower RPM can result in lower vibration, longer engine life and smoother cruising. The Screamin' Eagle 6-Speed Transmission is available as a complete transmission, or as a replacement gear set, and can be matched with Hydraulic or Cable-operated clutch controls.

Screamin' Eagle 6-Speed Transmissions feature forged chrome "trap door", forged shifter forks and forged and precisely ground gears. No speedometer or exhaust mount modifications are required. Complete transmissions are ready to install into the chassis, and the 6-Speed Gear Set Kits are designed to replace the stock gear set without removing the transmission. Gear Set Kits require slight modification (template included) to the Original Equipment transmission case, and include all necessary installation hardware.

Installation may require separate purchase of vehicle-specific Hydraulic or Cable-operated Clutch Side Cover Release Kit. The forged side covers feature the "Screamin' Eagle" script and bold "6 Speed" logo laser-etched into the mirror-chrome surface. *See page 527 for applications.*

A. Screamin' Eagle® Active Performance Muffler Kit

The best of both worlds. This street-legal exhaust system provides the horsepower and torque characteristics of Screamin' Eagle® Pro Race-Use Mufflers while maintaining EPA and CARB approved sound and emission levels. The catalyst-equipped exhaust system utilizes an electronic servo-controlled butterfly valve to alter the gas path between the left and right muffler. The integrated on-board computer measures operating conditions, and limits the exhaust flow to the left muffler to optimize performance, sound and emissions. The results are enhanced torque and horsepower throughout the operating range, and the rich, pleasing exhaust note you expect from a Harley-Davidson motorcycle. The complete system includes left and right catalyst-equipped mufflers, servo motor, cable-operated butterfly valve, plug-in on-board computer with service diagnostic capabilities, left-hand heat shield, and all necessary installation hardware. ENGINE REMANUFACTURING

When the miles start to add up, the Harley-Davidson® Engine Remanufacturing Program can put the rumble back into your powerplant simply, quickly and affordably. The program is available for the Evolution® 1340, Twin Cam 88,® Twin Cam 88B™ and Twin Cam 95™ engines. Contact your Harley-Davidson® dealer for more information.

Your engine's journey begins at your Harley-Davidson dealership. The engine is removed from your bike and shipped via Con-way® in a specially-designed container to our state-of-the-art Powertrain Operation, Capitol Drive facility in Wauwatosa, WI.

Upon its arrival, your engine is completely taken apart and inspected by the remanufacturing team. Engine components that can be cleaned and remanufactured to original specifications are saved, while those not worth saving are discarded.

All reusable parts are cleaned, and paint is thermally removed from the cylinders and heads. Small components are cleaned through a baking soda blasting process. After inspection, parts are powdercoated in our state-of-the-art production paint facility.

The engine—it's the heart and soul of your Harley-Davidson® motorcycle. To preserve it, we can remanufacture your high-mileage or aging motor to original specifications, with your choice of state-of-the-art chrome, polished and powder coated factory finishes. You have the option to select Stage I Big Bore upgrades, and when originally removed and installed by an authorized Harley-Davidson dealer, your remanufactured engine carries a 12-Month Unlimited Mileage Limited Warranty. *For details, visit: Harley-Davidson.com /*

Once powder coated, these parts are machined, bored and honed to exact tolerances. Then, they proceed through rigid specification checks. Only the components that meet our strict standards ever make it past this point.

After reassembly, your engine is run through a battery of tests to ensure it performs to Harley-Davidson standards. Upon passing these tests, your engine is awarded a one-year, unlimited mileage factory warranty. After cleaning and polishing, your engine is ready to come home.

*During reassembly, crankcases are set, bearings are pressed and components are meticulously reassembled. All chromed and polished components are replaced with new parts, and your engine is upgraded to meet the latest specifications, while retaining its stock configuration.**

Approximately two weeks after its journey began, your V-Twin® is returned to your dealer for installation with a new lease on life and its original Vehicle Identification Number (VIN).

For legal and warranty purposes, all engines will receive stock camshafts. If you have installed high-performance cams, they will not be reinstalled or returned.

HAND CONTROLS

Your style fingerprints are all over your bike. Now put them where they count. Custom hand and foot controls, mirrors, and handlebars set the tone in comfort and attitude. Start by selecting a handlebar from a full range of shapes and sizes. Add proper control cables and finish it with chrome.

Simple Style *Adding mirrors, grips and a little chrome can go a long way in establishing your personal direction. Installing a chrome master cylinder cover and hand levers gives instant gratification. To take your customizing further, add chrome switch caps, a set of chrome switch housings, custom hand grips and braided brake lines and control cables.*

Multi-Fit

Heated Hand Grips
Keep comfortable on those cool morning or frigid night rides. Warm hands have a major impact on overall body comfort, and sometimes gloves just aren't enough. These thermostatically controlled grips have variable heat settings and automatic temperature monitoring to adjust to changing ambient temperatures. The grips remain at a constant temperature regardless of changes in outside temperatures. The self-contained control circuit and control knob means you have no additional switches or controller boxes to mount, and the grips are switched on/off with the ignition to avoid draining your battery. The "glueless" grip design allows grip removal if you change handlebars or motorcycles. Patent pending.

Handlebar Basics*

Bars communicate style and also affect how you handle your bike. You want to select a handlebar that puts your arms in a position that matches both the attitude you want to convey and the kind of riding you expect to do. While every handlebar has its own distinct measurements and characteristics, there are four basic styles to consider in your quest for custom-styled comfort:

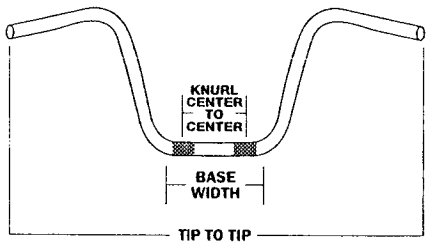
Ape Hangers
Pure custom attitude, best suited for boulevards and long straightaways.

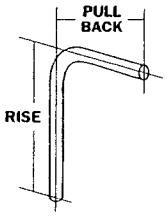
Drag Bar
A flat, no-nonsense handlebar for an aggressive riding style.

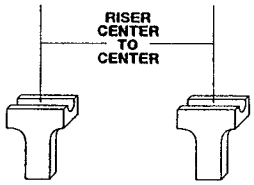
Sport Bar
Lower and wider bar for a slightly upright, forward leaning position.

Pull Back
Brings handgrips closer to the body for a more upright riding posture.

Handlebar Measurements







Rise is the vertical distance between a handlebar's tip and its base. Adding risers to bars that sit low can help put hand grips in a higher spot.

Pull Back brings hand controls closer while also lowering grip height. More pullback facilitates an upright posture, and suits riders with a shorter reach.

Width is measured from the tip of one hand grip to the other. Touring calls for a wider bar, while sport riding is best with a narrower tip-to-tip width.

Knurl Center to Center is the distance between the center of one knurl to the center of the other knurl. To ensure correct fit between the handlebar and risers, measure the center to center distance between the riser clamping surfaces and select a handlebar with the same dimension.

Multi-Fit

Diamondback™ Modular Front Brake Lines*

Now available in "Multi-Length" configurations, Diamondback Modular Brake Lines are sized to fit almost any handlebar and control configuration. The new two-piece design features common lower brake lines and a wide selection of upper brake lines in lengths designed to accommodate most Original Equipment and accessory handlebar shapes. The completely assembled upper lines are available in lengths that accommodate up to +10" over the stock configuration and can be ordered with 0°, 35° and 90° banjo angles for proper installation. The single JIC connection at the triple tree gives the lines a visually streamlined look, and the micro-fine wire brading complements the available Diamondback Clutch and Throttle Control cables. Upper and lower brake lines sold separately.
