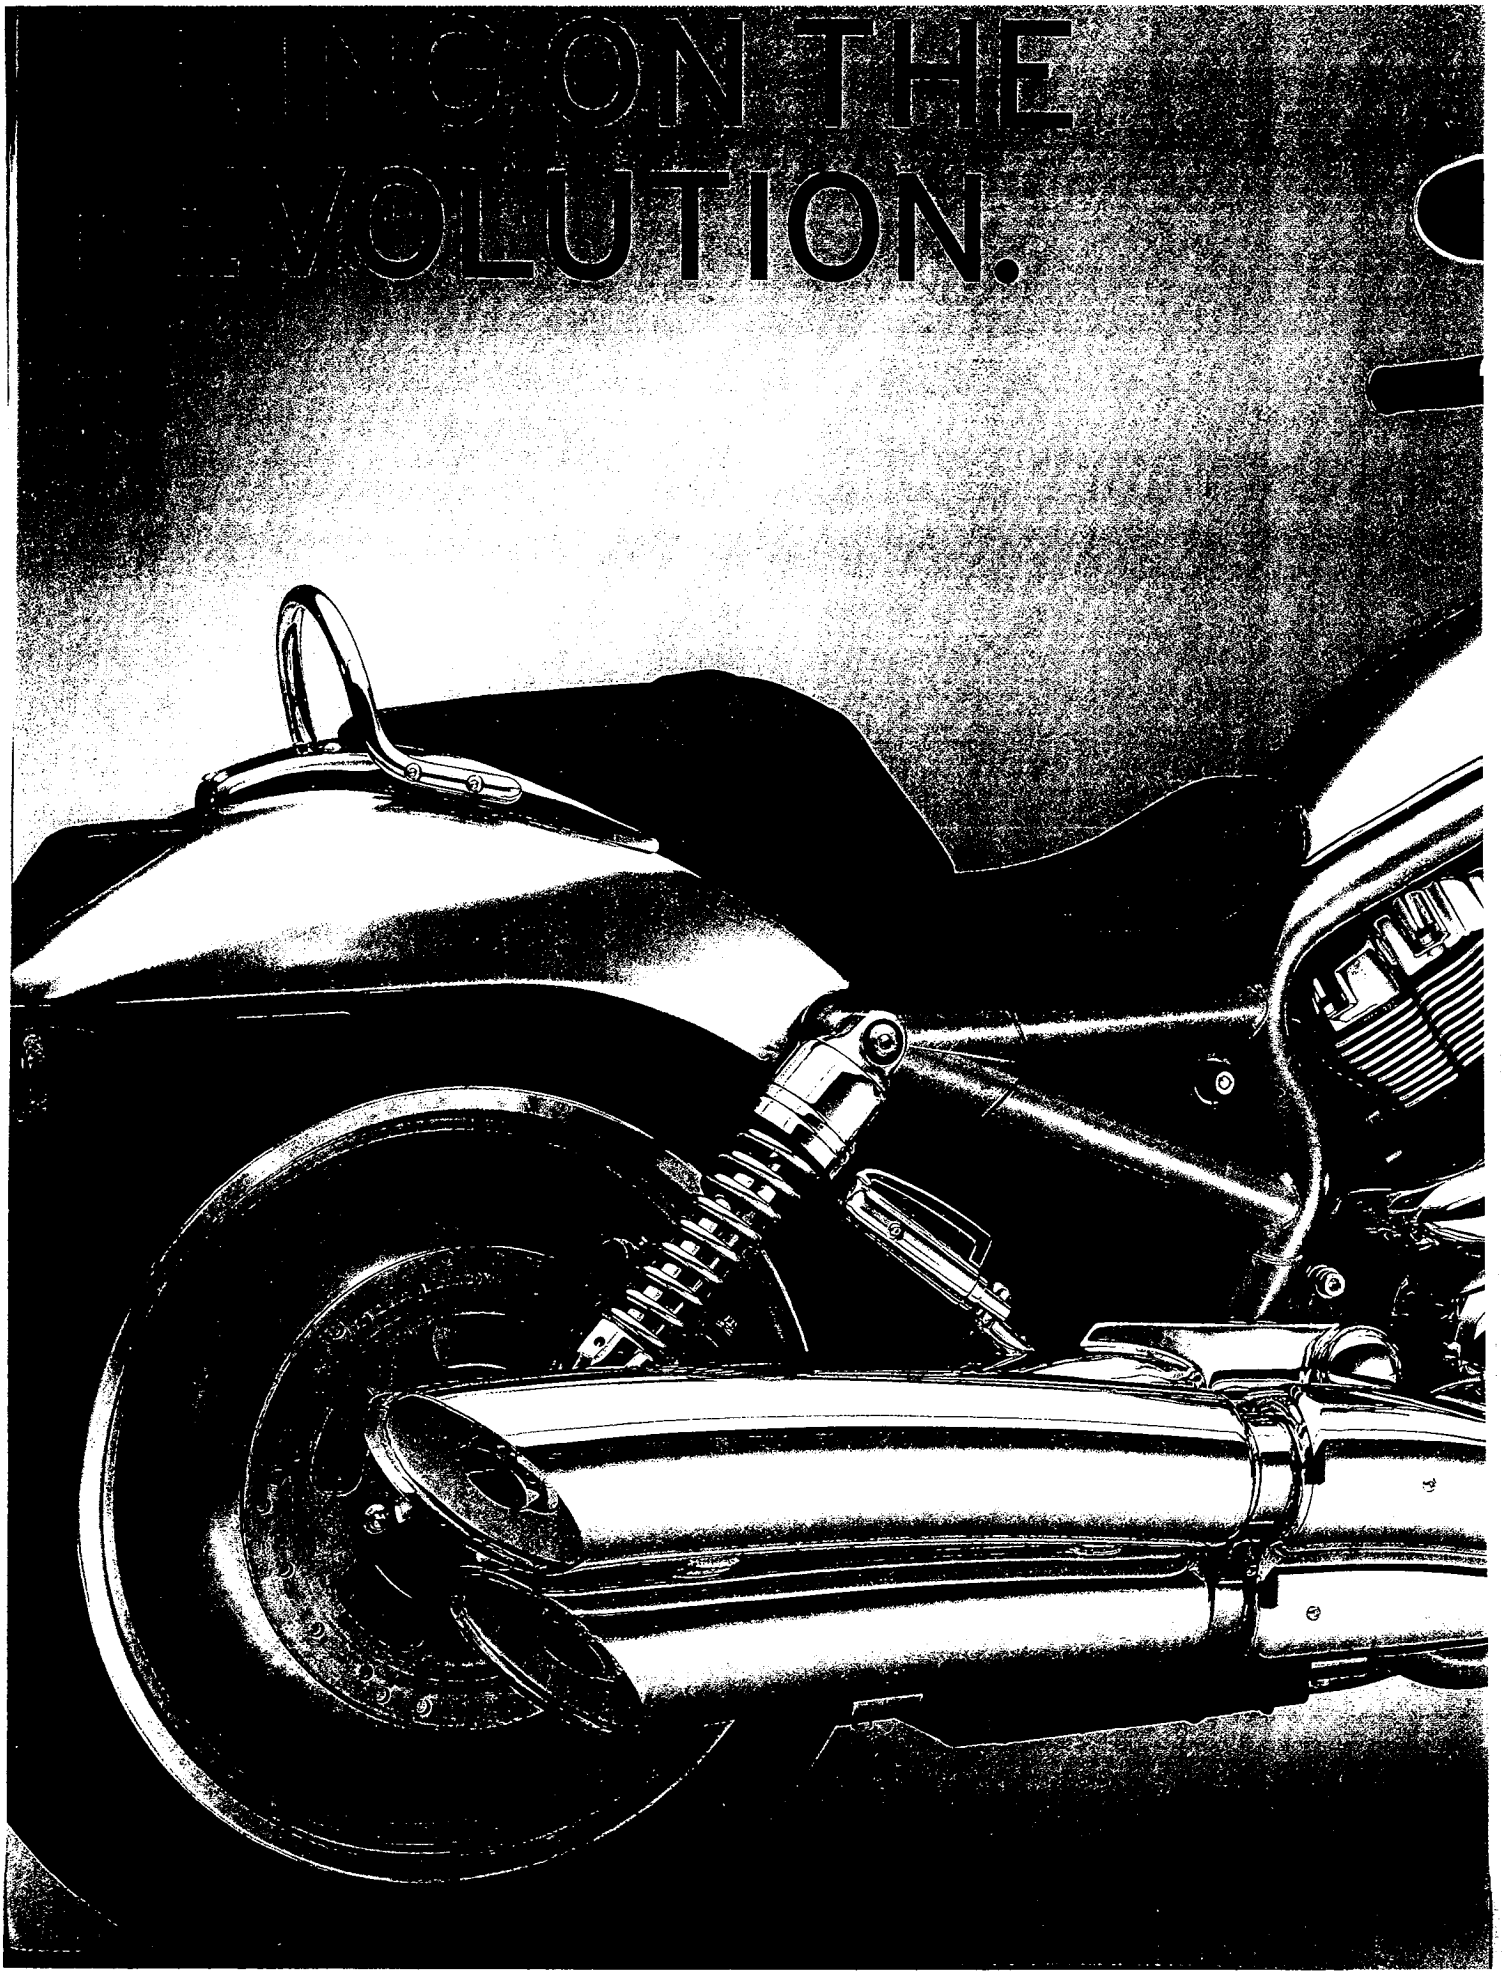
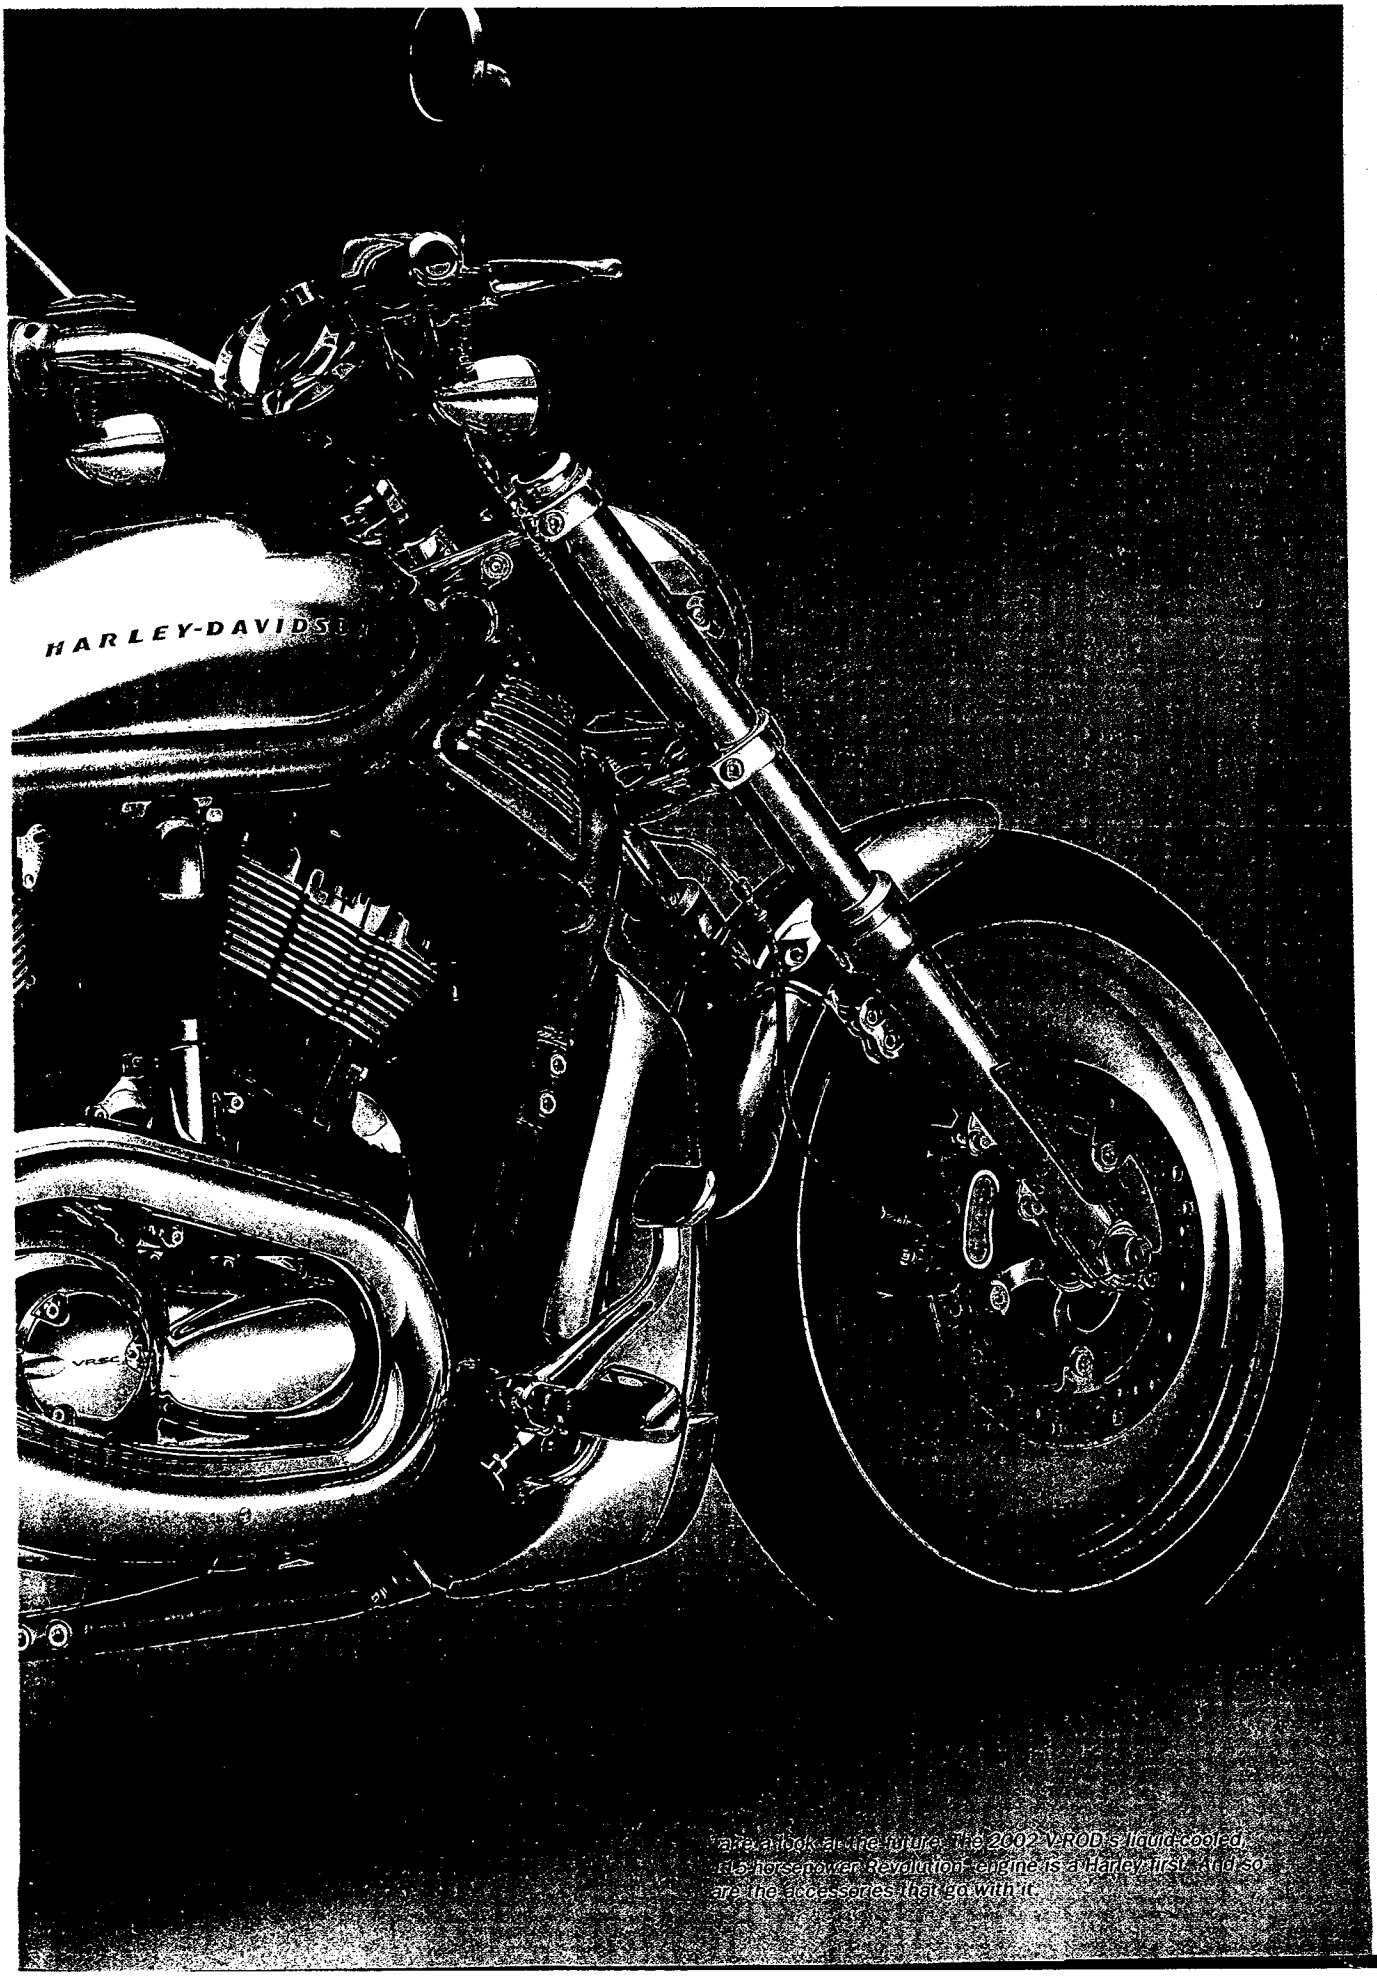
BE FIRST.
We don't make Genuine Harley-Davidson™ Motor Parts & Accessories just to be the first on the shelf, the first to get noticed or the first at the checkered flag. We design, engineer and build them to be the best. So that when it comes to custom parts for your bike, we're the ones you think of first.



ON THE
VOLUTION.



are a look at the future. The 2002 V-ROD's liquid-cooled, 115-horsepower Revolution™ engine is a Harley first. And so are the accessories that go with it.

FIRST ON THE BLOCK

Here's the deal. We built your bike. And for that very reason, we build the parts that go on it better than anyone else. Before a Harley-Davidson® motorcycle even rolls off the line, we spend years developing custom parts specifically for it. Which means you get more than the best parts on the planet. You get them first. So while the other guys are scrambling to knock out the chrome, we're already in the shop changing motorcycling forever. The choice is yours—you can bolt somebody else's metal on your ride, or you can trust in products built by the people who brought your bike to life. When you think about it, that's no choice at all.

The creation of the V-ROD™ and VRSC platform was driven by a vision of radical, custom styling that extended to all aspects of the vehicle through specially designed parts and accessories.

HEART Like everything stamped with the Harley-Davidson® name, Genuine Motor Parts & Accessories are developed by people who dream about rolling on the throttle with the pavement rushing by. It's a tradition of quality and craftsmanship that's been handed down over the generations, from one dreamer to another. Ever since the first Harley-Davidson motorcycle rumbled to life, our customers have depended on us to give them nothing less than products from our heart and soul. And that's exactly what we do.

WORTH We've got the most extensive motorcycle manufacturing network that's ever existed. And all those resources go into making our parts the best-built in the industry. We use the best materials. And the most advanced techniques. Our hexavalent chrome—made using one of the costliest and most labor-intensive procedures out there—is stronger, shinier, more corrosion-resistant, and longer-lasting than any other chrome on the market. All down the line, Harley-Davidson products deliver a value that can't be matched.

PRECISION Genuine Motor Parts & Accessories aren't just built to fit your bike. They're built to become one with it. To exact factory specifications and microscopic tolerances, using the latest technologies. Since we design the bikes, we know more about their components than anyone else. So you get precise fitment, superior function and complete confidence in your ride. From timing cover screws and fork assemblies, to braided-steel brake lines and chrome handlebars, nothing goes on a Harley-Davidson quite like a Harley-Davidson.

FIRST IMPRESSIONS

One look at your bike can tell people a lot. Like what you believe in. And which road you plan to take. You don't want to ride a look-a-like rig—you want head-to-tail looks that make your bike all your own. Harley-Davidson styling didn't happen overnight—it was earned over decades of passion, sweat and vision. It's the result of the ultimate collaboration of engineering and design, a product of the legends who defined what a motorcycle should be. That's a tradition we'll never forget. And it lives on in every Genuine Motor Part and Accessory we build.

It's tough to catch the Sportster® 883R standing still. But when you get a good look, the view's all the better thanks to Genuine Motor Parts & Accessories.

PERFORMANCE CONFIGURATIONS

CROSSED FLAGS:
Harley-Davidson® motorcycles modified with some (Screamin' Eagle) performance engine parts must not be used on public roads and in some cases may be restricted to closed-course competition.

In this Screamin' Eagle section, all engine-related performance parts identified with the crossed flags symbol are intended for racing applications only and are not legal for sale or use in California on pollution-controlled vehicles.

Alterations of emission related components constitutes tampering under the US EPA guidelines and can lead to substantial fines and penalties. Stage I and II require no machining. These configurations are not legal for sale or use in California on any pollution controlled motor vehicle. Intended for closed course competition only. May void limited vehicle warranty.

Configurations are intended for use with '99-later carbureted Twin Cam 88-equipped Dyna* models with staggered dual exhaust.

To build your own race motor, order each individual component part number within the list.

Corrected torque and horsepower measured at rear wheel on a Dynojet® Dynamometer. Your results may vary.

*Screamin' Eagle Slip-Fit Mufflers P/N 80063-95A have been replaced by Screamin' Eagle II Slip-Fit Mufflers P/N 80258-99A (Baloney Cut) or 80293-99A (Slash Down). We have seen similar performance results with these new mufflers on our Dynojet® chassis Dynamometer in these configurations.

D. SCREAMIN' EAGLE TWIN CAM 88 "HTCC" CYLINDER HEADS

D. SCREAMIN' EAGLE TWIN CAM 88 "HTCC" CYLINDER HEADS*

The Screamin' Eagle HTCC (High Torque Combustion Chamber) Cylinder Heads will be the cylinder head of choice for racers who love the feeling of torque. New from the ground up, these heads have a high velocity "D-Shaped" intake port incorporating a step in the bowl area to minimize reversion. A larger 2" intake valve enhances low lift air flow to promote higher torque at lower RPM's. This new intake port requires the use of the HTCC Intake Manifold P/N 29634-00 for proper port match. The exhaust valve and port have also been redesigned. The exhaust valve has been reduced in size (as compared to the Screamin' Eagle Twin Cam 88 Performance Heads) from 1.623" to 1.550", and the exhaust port is now oval shaped to promote flow and improved exhaust scavenging. The uniquely designed combustion chamber utilizes multi-pte squish areas, which combine with the high dome piston to compact and excite the fuel/air mixture for a fast and efficient burn, with less possibility of detonation. Valve spring components are the same as used in the Twin Cam Performance Heads, and can handle cams up to .575" lift and 6500 RPM. Separate purchase of 1550 Big Bore Cylinders, HTCC Forged Pistons and HTCC Intake Manifold required for proper installation. **For race application only.**

Offered in standard, .005" and .010" oversizes. Sold in pairs, they include rings, pins and circlips. For use only with Twin Cam 88 HTCC Cylinder Heads. **For race application only.**

A. SCREAMIN' EAGLE TWIN CAM 88 PERFORMANCE CYLINDER HEADS

Introducing a performance cylinder head for the Harley-Davidson® Twin Cam 88 engine from Screamin' Eagle, the performance leaders. We've combined the proven Screamin' Eagle valve train components and unique port shapes from our Evolution® 1340 cylinder heads with the Twin cam 88 engine "bathtub" combustion chamber to create a cylinder head that really performs. These heads offer a bolt-on compression ratio of 9.5:1 for a Twin Cam 88 (1450) and 10.0:1 for a Big Bore Twin Cam (1550). Combined with forged high compression pistons, both 1450 and 1550 engine configurations would achieve a 10.5:1 ratio. Use of Screamin' Eagle spark plugs P/N 32320-91 when flat-top pistons are used or P/N 32321-91 with high compression pistons is recommended. Best performance can be obtained by combining with one of our Screamin' Eagle camshaft kits. **For race application only.**

EVOLUTION 1340 SCREAMIN' EAGLE CARBURETED PERFORMANCE CONFIGURATIONS

CROSSED FLAGS:
Harley-Davidson® motorcycles modified with some (Screamin' Eagle) performance engine parts must not be used on public roads and in some cases may be restricted to closed-course competition.

In this Screamin' Eagle section, all engine-related performance parts identified with the crossed flags symbol are intended for racing applications only and are not legal for sale or use in California on pollution-controlled vehicles.

Alterations of emission related components constitutes tampering under the US EPA guidelines and can lead to substantial fines and penalties. Stage I and II require no machining. These configurations are not legal for sale or use in California on any pollution controlled motor vehicle. Intended for closed course competition only. May void limited vehicle warranty.

Configurations are intended for use with '99-later carbureted Twin Cam 88-equipped Dyna® models with staggered dual exhaust.

To build your own race motor, order each individual component part number within the list.

Corrected torque and horsepower measured at rear wheel on a Dynojet® Dynamometer. Your results may vary.

*Screamin' Eagle Slip-Fit Mufflers P/N 80063-95A have been replaced by Screamin' Eagle II Slip-Fit Mufflers P/N 80258-99A (Baloney Cut) or 80293-99A (Slash Down). We have seen similar performance results with these new mufflers on our Dynojet® chassis Dynamometer in these configurations.

E. HARLEY-DAVIDSON® FACTORY SECURITY SYSTEM

Equip your 2000 - later Harley-Davidson VRSC, Dyna, Softail® or Touring model with the only security system designed and approved by The Harley-Davidson Motor Company.

When armed, the Security System disables the starter and ignition while monitoring the electrical system and vehicle motion with adjustable sensitivity. Minor disturbances trigger a momentary warning; major ones an unbroken thirty-second alarm after which the Security System returns to monitoring. A distinctive four-way flasher pattern is the alarm signal. An optional self-powered Smart Siren Kit adds a piercing scream, which sounds even if the battery cable is cut.

The Security System is armed and disarmed with a remote control waterproof key fob utilizing state-of-the-art rolling code technology. If the key fob is not available, the rider may disarm the system by keying a previously entered personal code on the turn signal switches. A flashing status indicator informs the rider that the Security System is armed or disarmed.

When armed in the Transport Mode, the Security System disables the starter and ignition, but monitors only the electrical system, not vehicle motion. The vehicle may be moved, but electrical tampering triggers an alarm.

An Extended Storage Mode keeps the battery from discharging when the Security System is armed for extended periods of time.

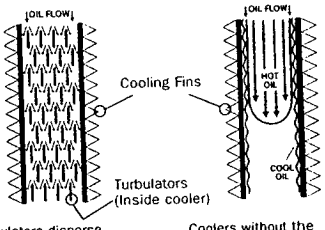
INSIDE VIEW OF SPORTSTER OIL COOLER WITH TURBULATORS

INSIDE VIEW OF CONVENTIONAL OIL COOLER WITHOUT TURBULATORS



Turbulators disperse and mix oil inside cooler to provide more efficient cooling capabilities. The cooler oil is not allowed to remain along the boundaries of the flow tube as in conventional coolers.

Coolers without the Turbulator system allow oil to flow only in a straight path. Oil does not mix and the cooler oil remains along the outer boundaries, while the hotter oil remains along the center path of flow. Without the mixing effects of the Turbulators, the conventional oil cooler provides less efficient cooling capabilities.

G. THERMOSTAT KIT

This thermostat features an advanced design that makes it smaller so that it can be hidden after installation. Thermostat is designed to allow oil flow to the cooler starting at 180 degrees Fahrenheit, while restricting oil flow to the cooler when oil temperature falls below 180 degrees Fahrenheit. Reliable function provides additional confidence to the rider who adds an oil cooler to their riding application.

62878-99 Fits all models with oil coolers. **$69.95**

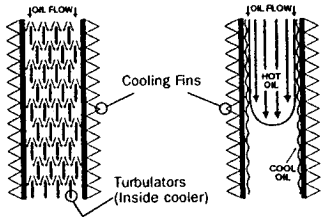
INSIDE VIEW OF PREMIUM OIL COOLER WITH TURBULATORS

INSIDE VIEW OF CONVENTIONAL OIL COOLER WITHOUT TURBULATORS



Turbulators disperse and mix oil inside cooler to provide more efficient cooling capabilities. The cooler oil is not allowed to remain along the boundaries of the flow tube as in conventional coolers.

Coolers without the Turbulator system allow oil to flow only in a straight path. Oil does not mix and the cooler oil remains along the outer boundaries, while the hotter oil remains along the center path of flow. Without the mixing effects of the Turbulators, the conventional oil cooler provides less efficient cooling capabilities.
