I CERTIFY THAT, ON DECEMBER 17, 2004, THIS PAPER IS BEING DEPOSITED WITH THE U.S. POSTAL SERVICE AS FIRST CLASS MAIL IN AN ENVELOPE ADDRESSED TO THE COMMISSIONER FOR TRADEMARKS, P.O. BOX 1451, ALEXANDRIA, VA 22313-1451

  
Sonya J. Erickson

### NOTICE OF APPEAL

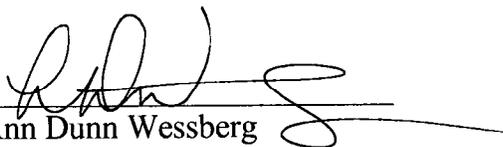

Applicant hereby appeals to the Trademark Trial and Appeal Board from the final decision of the United States Patent and Trademark Office Examining Attorney refusing registration of the above-identified mark, which decision was mailed June 17, 2004.

Pursuant to Trademark Rule 2.6. 37 C.F.R. Section 2.6, the requisite \$200 fee for filing the appeal is enclosed. If the enclosed should prove insufficient such that any additional fee is required, the Commissioner is authorized to charge our Deposit Account No. 06-0029 and notify us of the same.

Respectfully Submitted,

BUSINESS COMMUNICATIONS  
SYSTEMS, LLC

**RESPONSE**

Applicant responds to the Office Action mailed on June 17, 2004. No fee is deemed necessary. Should any fee be required, the Commissioner is authorized to charge our Deposit Account No. 06-0029 and to notify us of the same.

**REQUEST FOR AMENDMENT AND FOR RECONSIDERATION****REQUEST FOR AMENDMENT**

Applicant respectfully requests an amendment to the identification of services to read in its entirety, as follows:

Coordinating office telecommunications systems, namely, coordinating the installation, relocation, maintenance and servicing of voice and data systems in International Class 37; and

Telecommunications services to business consumers, namely, local and long distance transmission of voice, data and images by means of telephone, telegraphic, cable and satellite transmissions in International Class 38.

**REQUEST FOR RECONSIDERATION**

The Examining Attorney (the "Examiner") has made final his refusal to grant registration, alleging that there is a likelihood of confusion between the mark that is the subject of the application (the "Subject Mark") and Registration No. 2,717,466 (the "Cited

Registration”) for the mark TAILWIND (the “Cited Mark”) registered to Airshow, Inc. (the “Registrant”) for use in connection with a “satellite processor, namely, electronic equipment enabling aircraft to receive direct broadcast satellite television programming signals for display to passengers on an aircraft during flight” in International Class 9. In light of the amendment provided above and the additional information provided herein, Applicant respectfully requests that the Examiner reconsider and withdraw his refusal to register the Subject Mark.

### **BASIS FOR RECONSIDERATION**

The Examiner notes that determining whether a likelihood of confusion exists requires a two-part analysis: (1) first, the marks are to be compared for similarities in sight and sound; and (2) second, the goods or services offered in connection with the marks are to be compared to determine whether they are related in some manner, or whether the conditions surrounding their marketing are such that they could be encountered by the same purchasers under circumstances that could give rise to the mistaken belief that the goods and/or services come from a common source. Taking these issues in reverse order, Applicant’s services in the application for the Subject Mark (the “Subject Application”) and Registrants goods in the Cited Registration are not sufficiently similar to meet this standard and the marks are sufficiently dissimilar in sign and sound to be distinguishable. This issues are addressed in turn.

### **Unrelated Goods and Services**

Applicant’s services in the Subject Application and Registrant’s goods in the Cited Registration the goods or services offered in connection with the marks are not so related that the conditions surrounding their marketing are such that they could be encountered by the same purchasers under circumstances that could give rise to the mistaken belief that the

goods and/or services come from a common source. The Examiner maintains that it is common for telecommunications-related services to be offered under the same mark as telecommunications equipment. Thus, reasons the Examiner, since telecommunications services are offered in connection with the Subject Mark and telecommunications equipment is offered in connection with the Cited Mark, a likelihood of confusion could exist between the two marks. Applicant respectfully disagrees and asserts that the telecommunications industry cannot be viewed so broadly as to make any and all telecommunications services be considered related.

The Cited Mark is used in connection with a narrowly defined “satellite processor, namely electronic equipment enabling aircraft to receive direct broadcast satellite television programming signals for display to passengers on an aircraft during flight” (in international class 9). These goods have a specific and highly specialized purpose -- they are designed for use on aircraft to receive satellite television programming broadcasts. By contrast, the services offered in connection with the Subject Mark are class 37 and 38 installation, relocation, maintenance, and servicing of office telecommunications systems offered to business consumers, and supplying those business consumers with local and long distance voice and data service. Applicant’s services do not include satellite television broadcast programming and have no connection with aircraft or with equipment designed for use on aircraft.

The Examiner asserts that the goods and services offered in connection with the two marks at issue are related because they are both in, or are used in, the telecommunications industry. However, the mere fact that both the Cited Mark and the Subject Mark have some vague connection to the broadly defined “telecommunications” industry is not sufficient reason in itself to support the Examiner’s finding that a likelihood of confusion could exist

between the marks. The goods used in connection with the Registered Mark are plainly described as equipment to receive satellite broadcast television programming on aircraft during flight. Applicant's services, on the other hand, relate to the office telephone equipment used by businesses on the ground. These are very different goods and services across the vast telecommunications spectrum. See In re Digirad Corp., 45 U.S.P.Q. 2d 1841 (T.T.A.B. 1998) (nearly identical marks on very sophisticated electronic equipment); Astra Pharmaceutical Products, Inc. v. Beckerman Instruments, Inc., 220 U.S.P.Q. 786 (1st Cir. 1983) (identical marks in the pharmaceutical area, but on different products). In fact, no likelihood of confusion could exist between the two marks because the goods and services offered in connection with the Subject Mark and the Cited Mark are not related, competitive or complementary, and therefore would not be *encountered by the same purchasers in a manner that could give rise to a mistaken belief that those goods and services originate from a common source.*

#### **Examiner's Evidence Does Not Support Finding**

The Examiner has asserted that Applicant's services in the Subject Application and Registrant's goods in the Cited Mark are related in some manner, or the conditions surrounding their marketing are such, that they could be encountered by the same purchasers under circumstances that could give rise to the mistaken belief that the goods/services come from a common source. Office Action dated June 17, 2004 (citing In re Martin's Famous Pastry Shoppe, Inc., 748 F.2d 1565, 223 USPQ 1289 (Fed. Cir. 1984), among others). In either case (whether the goods/services are related in some manner or the conditions surrounding their marketing is such), to refuse registration the Examiner must find *that [the goods/services] could be encountered by the same purchasers under circumstances that could give rise to the mistaken belief that the goods/services come from a common source.*

The Examiner references twenty items in support of his finding that a likelihood of confusion could exist between the Subject Mark and the Cited:

(1) the following three U.S. Registrations (also identified in the First Office Action): 2,596,041; 2,645,020; and 2,770,776 (Exhibits A-C);

(2) the following thirteen additional U.S. registrations: 1,384,125; 1,699,744; 2,110,288; 2,155,313; 2,088,761; 2,736,915; 2,556,316; 2,386,868; 2,432,717; 2,314,417; 2,541,217; 2,698,197; and 2,756,820 (Exhibits D-N); and

(3) information from the following four web sites: www.dishnetwork.com; www.iridium.com; www.directv.com; and www.jetblue.com (Exhibits L, O-Q).

The Examiner's evidence does not support a finding that consumers are likely to believe that Registrant's goods and Applicants services are related in some manner, or the conditions surrounding their marketing are such, that they could be encountered by the same purchasers under circumstances that could give rise to the mistaken belief that the goods/services come from a common source. On the contrary, the examples cited by the Examiner support the conclusion that Registrant's goods and Applicant's services are not so related, and the conditions surrounding their marketing is not such, that they could be encountered by the same purchasers under circumstances that could give rise to the mistaken belief that the goods/services come from a common source.

#### **Common Carrier v. Content Carrier Telecommunications**

The telecommunications field is exceptionally broad. Telecommunications services can be distinguished into two, non-overlapping categories. Telecommunications services are either (1) common carrier services that merely provide a means or conduit to transmit voice and data communications signals (e.g., telephony services); or (2) content carrier services that broadcast content-based programming (e.g., television services). From the consumer's perspective, telecommunications goods (or equipment) either (1) allow the consumer to transmit and receive voice and data communications signals (e.g., telephone); or (2) receive

informational or entertainment broadcast programming content (e.g., television). Both kinds of telecommunications equipment may use similar wires (e.g., cables), but their purposes are distinctly different. Just as not all electronic devices are related because they are battery operated or have an electrical cord, the mere fact that both Registrant's goods and Applicant's services may use satellite as a means does not make them related. In contrast, a mobile telephone is related to the transmission of voice and data communication via telephone. Likewise, satellite television broadcasting receivers are related to television broadcasting services. Mobile telephones, however, are not sufficiently related to satellite television broadcasting services such that consumers would expect both to originate from the same source under the same trademark. Likewise, satellite television broadcasting receivers are not sufficiently related to voice and data communications transmissions via telephone such that consumers would expect both to originate from the same source under the same trademark.

Every single example cited by the Examiner of purportedly related telecommunications goods and services sold under the same mark pairs either (1) common carrier voice and data transmission services with goods for transmitting and receiving voice and data; or (2) content carrier broadcast programming services with goods for receiving content-based broadcast programming. There are no cited examples of a trademark that is used to cross this line. That is, there are no trademarks cited that are used for broadcast programming goods (such as a satellite processor used to receive television broadcasts) and common carrier services (such as voice and data communications services). As you will see from the following chart, in every instance cited by the Examiner, the goods and services are related because they either (1) transmit voice and data communications; or (2) broadcast

programming content. These goods and services are categorized below respectively as either (1) "voice & data communications"; or (2) "broadcast programming."

Ex.	Mark	Reg. No.	Goods/ Equipment	Services
A	CINGULAR	2,596,041	VOICE & DATA COMMUNICATIONS	VOICE & DATA COMMUNICATIONS
			wireless telephones, batteries and cases	transmission of voice, data, images . . . via same
B	WHIRLWIND	2,645,020	VOICE & DATA COMMUNICATIONS	VOICE & DATA COMMUNICATIONS

I	LIGHTSCAPE NETWORKS	2,756,820	VOICE & DATA COMMUNICATIONS	VOICE & DATA COMMUNICATIONS
			voice and data transmission systems	voice, facsimile, and data and video transmissions services
J	TOUCHNET	2,386,868	VOICE & DATA COMMUNICATIONS	VOICE & DATA COMMUNICATIONS
			computer hardware . . .for voice interaction with the Internet and real time and stored data, voice and video communications	data, video and voice telecommunication services, namely, providing connections via modem, telephone lines . . .
K	DIRECTV	2,698,197	BROADCAST PROGRAMMING	BROADCAST PROGRAMMING
			receivers, receiver module . . . satellite dishes . . . all for use in the direct-to-home satellite broadcasting industry	satellite television broadcasting services, broadcasting programs . . . .
L	DISH NETWORK dishnetwork.com	2,155,313	BROADCAST PROGRAMMING	BROADCAST PROGRAMMING
		2,088,761	signal frequency receivers and satellite receiver systems for receiving residential and commercial satellite programming	providing television broadcasting services via communication satellites
M	MUZAK	2,432,717	BROADCAST PROGRAMMING	BROADCAST PROGRAMMING
			audio and video system equipment, namely, tuners, receivers, amplifiers, tape players, compact disc players . . . .	radio and satellite broadcasting of music, information and data for business use
N	AT HOME IN THE AIR	2,541,217	BROADCAST PROGRAMMING	BROADCAST PROGRAMMING

		satellite television and distribution equipment . . . computer hardware and software used in receiving and distributing television, radio and audio broadcast signals	installation of television, radio and audio broadcast reception equipment; providing subscription satellite broadcasting services for the airline industry
--	--	---	--

The above references cited by the Examiner do not satisfy the requirement that the parties' goods and services are so related, or the circumstances surrounding their marketing are such, that they are likely to be encountered by the same persons under circumstances that would give rise to the mistaken belief that they originate from the same source. Registrant's broadcast television receivers and Applicant's voice and data installation, relocation, maintenance, servicing, and transmission services are not so related, nor are the circumstances surrounding their marketing are such, that they are likely to be encountered by the same persons under circumstances that would give rise to the mistaken belief that they originate from the same source. In none of the examples in the chart above is the same mark used in connection with both goods to receive broadcast content (like Registrant's goods) and voice and data services (like Applicant's services).

The Examiner's three remaining citations, each discussed more fully below, are as follows: (1) [www.iridium.com](http://www.iridium.com); (2) [www.directv.com](http://www.directv.com); and (3) [www.jetblue.com](http://www.jetblue.com). These three citations fail to support the Examiner's finding of a likelihood of confusion because they do not demonstrate that the same mark is used in connection with the related telecommunications goods and services.

#### 1. The Web Site at *IRIDIUM.COM*

Iridium provides satellite telecommunications services to consumers in the airline industry. However, as shown at Exhibit O, the goods (the equipment) used in connection

with Iridium's services are offered by third parties, namely, Aerodata AG, AirCell, Inc., Honeywell, Blue Sky Network, Int'l Communications, Sky Connect LLC, SkyTrac Systems, Ltd. and On-Go, Inc., under trademarks such as AEROPHONE, AIRCELL, AIRSAT, BLUESKY LINK, SKY CONNECT and SKY TRAC. That is, Iridium's services are used in connection with equipment provided by others (for example, IRIDIUM voice and data communications services are transmitted between AEROPHONE telephones). Thus, Iridium's services and these telecommunications goods are not offered under the same mark and they do not originate from the same source. Accordingly, this evidence does not support the Examiner's contention that it is common for telecommunications services and/or telecommunications maintenance/repair services to be offered under the same mark as telecommunications equipment, because the goods and services cited herein are not offered under the same mark.

## 2. The Web Site at *DIRECTV.COM*

The web site *directv.com* indicates that DirecTV offers satellite television programming services for private jets. Unlike Applicant's services, DirecTV's services are directly related to the goods offered in connection with the Cited Mark. Indeed, the DirecTV web site provides (as shown at Exhibit P) that the equipment used for receiving these programming services is made available by, among others, Airshow, Inc.— the Registrant. Nevertheless, these "related" goods and services are offered by different, unrelated sources that are readily identified to consumers. That is, DIRECTV broadcast programming services can be viewed on AirShow's TAILWIND equipment for receiving broadcast programming. The services and the equipment are not offered under the same mark and they do not originate from the same source. Accordingly, this evidence does not support the Examiner's contention that it is common for telecommunications services and/or telecommunications

maintenance/repair services to be offered under the same mark as telecommunications equipment, because the goods and services cited herein are not offered under the same mark.

### 3. The Web Site at *JETBLUE.COM*

JetBlue Airlines (“JetBlue”) is an airline service company. Information from the JetBlue web site, provided at Exhibit Q, provides that JetBlue aircraft that are fit with the necessary hardware, provide JETBLUE flights with DIRECTV satellite programming services to travelers. JetBlue or the manufacturers of its aircraft purchase the hardware that is used on the aircraft to receive such satellite broadcast programming services. The satellite broadcast programming services themselves originate from a different, readily-identified source — namely, DirecTV. Again, the goods and services are not offered under the same mark and they do not originate from the same source. Accordingly, this evidence does not support the Examiner’s contention that it is common for telecommunications services and/or telecommunications maintenance/repair services to be offered under the same mark as telecommunications equipment, because the goods and services cited herein are not offered under the same mark.

### Further Evidence Regarding the Cited Mark

The Cited Mark is registered to Airshow, Inc. Information about Airshow, Inc. is available from [www.airshowinc.com](http://www.airshowinc.com). (See Exhibit R) As noted at the attached Exhibit S, Rockwell Collins acquired Airshow, Inc. Information from the Rockwell Collins global web site (at [www.rockwellcollins.com](http://www.rockwellcollins.com)) is provided at Exhibit T. This web site reveals that the Cited Mark is used in connection with a product designed for aircraft that is capable of receiving satellite television broadcasts. Further, the web site shows that the actual satellite broadcast programming services—the telecommunications services most closely related to this product—are provided by another party, namely, DirecTV. By contrast, Applicant’s

services do not include television broadcasting services and are therefore entirely unrelated to the type of goods offered in connection with the Cited Mark.

The Cited Mark is registered for use in connection with hardware installed on aircraft. These goods are not related to, or competitive with, or complementary to, the services of designing and maintaining office telecommunications systems that are provided in connection with the Subject Mark. There is no likelihood of confusion between these two marks because they are not likely to be *encountered by the same purchasers under circumstances that could give rise to the mistaken belief that the goods or services come from a common source.*

Applicant respectfully requests that the Examiner reconsider its findings in light of the foregoing arguments and evidence.

#### **Dissimilar Marks**

As to the second part of the two-part DuPont analysis referenced at the outset, DuPont requires examination of the similarity of marks in their entireties, as to their appearance, sound, connotation, and commercial impression. As discussed in more detail in the response to the October 16, 2003 Office Action, the connotation of Airshow's mark is intended to invoke the concept of a tailwind that makes an airplane or other means of transportation move forward more easily. In contrast to Registrant's Mark (TAILWIND), Applicant's Mark is TAILWIND VOICE & DATA. As discussed at length above "VOICE & DATA," although disclaimed, nonetheless distinguishes the nature of Applicant's services from Registrant's goods. Applicant's services involve installing, relocating, maintaining, servicing, and transmitting voice and data communications systems. This is clear from Applicant's Mark TAILWIND VOICE & DATA. In contrast, Registrant's TAILWIND Mark is used in connection with equipment to receive satellite broadcast programming on

aircraft during flight. Because the marks are different in appearance, sound, connotation and commercial impression, the marks are unlikely to be confused.

Thus, in the two-part DuPont analysis, (1) when the two marks are compared, they are sufficiently dissimilar in appearance, sound, connotation, and commercial impression; and (2) when Registrant's goods and Applicant's services are compared, it is clear that confusion is not likely because these two marks are not likely to be *encountered by the same purchasers under circumstances that could give rise to the mistaken belief that the goods or services come from a common source*. Applicant respectfully requests, therefore, that the Examiner withdraw his final refusal and allow this mark to move forward to publication.

#### **INFORMATION TO COMPLETE THE RECORD**

Applicant's response to the Examiner's first Office Action included references to a number of prior registered TAILWIND marks. However, Applicant unintentionally failed to include printouts from the United States Patent and Trademark Office's electronic search records of these registrations. For the purpose of completing the record, copies of the referenced records are enclosed herewith at Exhibit U.

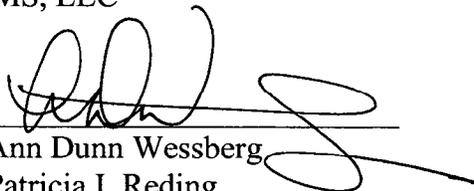

**CONCLUSION**

For the foregoing reasons, applicant submits that this application is now in order and respectfully requests its publication.

Respectfully Submitted,

**IRIDIUM SATELLITE SOLUTIONS®**

**ABOUT IRIDIUM - OUR STORY**

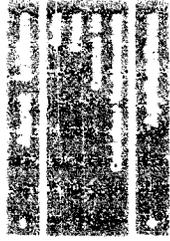

## How Iridium Works

The Iridium Satellite System is the only provider of truly global, truly mobile satellite voice and data solutions with complete coverage of the Earth (including oceans, airways and Polar regions). Through a constellation of 66 low-earth orbiting (LEO) satellites operated by Boeing, Iridium delivers essential communications services to and from remote areas where terrestrial communications are not available. The service is ideally suited for industrial applications such as heavy construction, defense/military, emergency services, maritime, mining, forestry, oil and gas and aviation. Iridium currently provides services to the United States Department of Defense and launched commercial service in March 2001.

**IRIDIUM OPERATIONAL ADVANTAGES**

- Only two-way coverage that includes the world's oceans and polar regions.
- Equip your employees with Iridium message receive units and reach them anywhere.
- Handheld phones and message receive units for off-aircraft usage.
- Installs on any aircraft or helicopter.
- No special code dialing necessary.
- Flat rates with no long-distance or roaming charges.
- Special low air-to-air rates.
- Light, small equipment with low-drag antenna.

**TWO-WAY GLOBAL VOICE, FAX AND DATA:**

Only Iridium's global service allows aviation users to send and receive voice, messaging and data regardless of their positions on or above the earth. Air-to-land. Land-to-air. Air-to-air. With equipment options that are compact and simple to install, Iridium is a powerful, yet practical single solution for your aviation communications needs.

## AeroPhone

### What is it?

Aerodata's AeroPhone® is an airworthiness certified single-box, one channel communication system providing world-wide voice and data communication by using the Iridium Satellite network. With a weight of approximately 5lbs, the system adds negligible weight to helicopters or fixed-wing aircraft.

### Why do you need it?

The AeroPhone designed and manufactured by Aerodata is especially tailored to applications in the sector of aviation. The comprehensive combination of features represent an ideal solution for special mission aircraft and helicopters such as fire fighting, EMS and police forces as well as for use on small business jets. In remote areas, the AeroPhone may represent an additional safety measure.

The operation by means of the Cockpit Dial Panel (CDP) enables the flight crew to control the system and place worldwide calls via the primary intercom system. The optional feature of a handset allows the cabin crew or passengers to place phone calls out of the cabin. In addition, the AeroPhone provides data transfer and World-Wide-Web access via a standard RS232 connector.

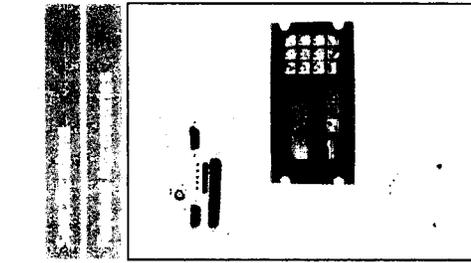

The AeroPhone® is installed with minimum effort. The small size of all components of the system allows for an easy installation on all types of aircraft or helicopters. Due to its modular design the AeroPhone can be connected to different Flight and Mission Management systems (e.g. Aerodata's AeroNav®) for voice and data functions. Optionally, the AeroPhone®/Iridium can be connected with Aerodata's GSM Telephone to support both GSM network access (while on the ground) and Iridium network access (while in the air).

### Features

- Audio interface to primary intercom system or dedicated headset / handset as desired
- Two separate control heads (e.g. Cockpit Dial Panel, AD-CDP-01) connectable to the Satellite Transceiver Unit
- Central phone book for all control heads
- Interface to additional aural and/or visual incoming call indication
- RS-232 interface for Iridium data services
- Delivered with JAA Form One (AeroPhone components) or FAA Form 8130-3 (Antenna)
- Optional capability extension with Aerodata's GSM telephone to gain GSM network access while on the ground

### Services Supported

- Two-way voice calls
- Data services (Dial-Up and Direct Internet)
- Worldwide SMS service (Mobile Originated and Mobile Terminated)

## Sky Connect SatTalk II

### What is it?

The SatTalk II aircraft satellite telephone system developed by ICARUS Instruments provides you with clear telephone communications and Internet access in your aircraft cockpit and cabin. It works at any altitude anywhere in the world. Provides reliable data connections, no dead zones, no altitude restrictions and no eavesdropping with Iridium's all digital satellite technology.

All calls, voice or data, go from the aircraft's Iridium antenna through one or more Iridium low-earth-orbit satellites. Iridium-to-Iridium calls are sent directly to their destination. All other calls are routed to an Iridium gateway, which then routes voice and dial-up data calls over the public switched telephone network, while direct Internet data calls are routed to the Internet over dedicated connections.

### Why do you need it?

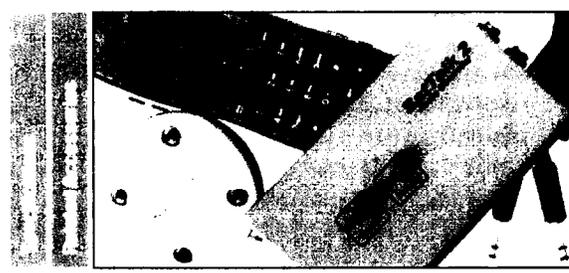

Flight crewmembers can use their aviation headset to place and receive voice calls while simultaneously monitoring ATC communications. ATC communications automatically override an in-progress Iridium call, placing the Iridium call on hold until the ATC communications are complete. Passengers in quiet cabins may use a lightweight headset with boom microphone or telephone handset. Incoming calls will ring in the aviation headset and in the cabin-mounted headset or handset. The phone can also be set to auto-answer after a set number of rings. Dial-Up data calls and Direct Internet data calls can also be placed from an attached computer.

### Features

- System is portable, enabling it to be easily moved from aircraft to aircraft (excluding the antenna, which is permanently mounted).
- System is an accessory to the Motorola Satellite Series 9505 portable phone. The phone can be easily disconnected and used portably and independently of the aircraft.
- Aviation headset plugs into jacks on the SatTalk audio controller, with no modifications required to the headset or the aircraft communication system.
- A cable with headphone and microphone plug is supplied to allow an easy connection to your aircraft audio system.
- Helicopter and military low-impedance headsets are also supported with optional cables.
- SatTalk can be used with any audio panel even ones without special telephone inputs.
- An optional handset kit is available for cabin use.
- The phone's battery is charged while the aircraft is powering it.
- Provides worldwide coverage in the air as well as on the ground.

### Services Supported:

- Two-way voice calls
- Worldwide messaging
- One number calling to the aircraft
- Data services (Dial-Up and Direct Internet)
- Voice mail (Optional)
- Call Forwarding
- Stored Phone Numbers
- Mute

## Sky Connect SatTalk III

### What is it?

SatTalk III is an aviation installation kit for Iridium 9505 telephones for use with low impedance headsets used by the military worldwide and by certain helicopters.

The kit includes an aviation antenna, dual channel SatTalk III audio controller, and all required cables and connectors. The dual channel audio controller allows two crewmembers to plug their headsets into the system so that one or both can use the Iridium telephone, while still monitoring radio and intercom audio traffic. A unique privacy function permits one or both headsets to be isolated from the aircraft to provide complete privacy for the telephone call. An internal intercom connects the two users so that they can hear each other while both are on the phone. SatTalk III is compatible with both Push-to-Talk and VOX intercom systems. An adjustable sidetone feature allows each user to hear themselves during a call, a feature especially important in a high noise aircraft environment. Separate volume controls on the audio controller adjust telephone audio levels and the intercom level. Incoming calls ring in the crewmember's headset. The SatTalk III audio controller can be installed as a plug-and-play portable device or hardwired into the aircraft for permanent installation. The antenna is a low drag, round, GPS type patch antenna.

### Why do you need it?

Crewmembers of military aircraft can now talk over their headsets to any telephone in the world using the combination of SatTalk III and a Motorola 9505 Iridium phone. Even civilian aircraft crewmembers using low impedance headsets can use SatTalk III in their aircraft to originate and receive telephone calls. The dual channel feature allows two crewmembers to share one 9505 either individually or simultaneously. The privacy feature allows complete isolation of a crewmember from the aircraft's audio system for uninterrupted telephone conversation. SatTalk III also permits radio and intercom traffic to mix with telephone audio. The high noise environment intrinsic to aircraft is completely overcome by using headsets coupled through the SatTalk III audio controller to the 9505 Iridium phone.

### Features

- Compatible with all low impedance aviation headsets
- Compatible with 9505 Iridium phone
- Two crewmembers share one 9505
- One or both users on phone at once
- Internal intercom
- Phone and intercom volume controls
- Supports PTT and VOX intercoms
- Privacy function for headset isolation to phone
- Individually adjustable sidetone levels
- Portable or permanent installation
- Low drag patch antenna

### Services Supported

- Two-way voice calls
- Crew Calling
- Worldwide inbound SMS messaging
- Data services (Dial-Up and Direct Internet)
- Voice mail (Optional)
- Call Forwarding
- Pre-paid Calling

### ISAT-100

#### What is it?

SkyTrac's ISAT system provides flight following and messaging/data transfer between aircraft and ground using Iridium's Short Burst Data (SBD) service. SkyTrac provides operators with a complete turnkey and fully automated system including hardware, operational Base software suite, Iridium satellite communication service and full system support. Iridium's SBD service enables real time data transfer from aircraft anywhere in the world to your desktop for as little as pennies per transmission.

#### Why do you need it?

- Know your aircrafts' present location
- Immediate access to aircrafts' flight history
- Contact aircrew with mission updates
- Produce billing/flight information sooner and more efficiently
- Determine compliance with your Standard Operating Procedures
- Monitor aircrafts' performance remotely
- Identify aircrafts' maintenance issues sooner
- Reduce human record keeping issues
- Employ the new industry standard
- Incorporate future system expansion with only software modifications

#### Features

- Fully automatic – No pilot input required to provide full system functionality
- Complete position reporting
- Air Time/flight Time capture
- System verification in cockpit
- Message to aircraft indication
- Panic button service
- Engine status acquisition/transmission – analog voltages, inputs, switches, digital signals
- Sophisticated yet user friendly operational Base software suite with map, log and report functionalities

## USING IRIDIUM - PRODUCTS AND SERVICES

### uniHub

**What is it?**  
 The uniHub is a plug-and-play solution that allows the end user to do more with the Iridium phones, including telephony interface for Group 3 fax and analog data modem, WFI access to Iridium services, interfacing devices to the Iridium data port such as USB-based GPS receivers, and provides a simple interface for managing applications and multi-channel aggregation.

**Why do you need it?**  
 If you want to fax, the uniHub allows Iridium subscribers to send and receive faxes over the Iridium network.

If you are working indoors or are in areas where line-of-sight is not possible, Iridium subscribers can now access Iridium data services via WFI from an indoor computer while the Iridium and uniHub equipment is in line-of-sight of the Iridium satellites.

If you need to connect devices with USB ports, wired LAN ports, and analog modems to Iridium, the uniHub offers a plug-and-play capability for connecting these devices to Iridium equipment.

**How to Purchase**  
 If you are interested in purchasing this product or service, please contact an [Authorized Service Partner](#) or contact [On-Go Inc.](#)

### Features

- Supports transmission of data from and to Group 3 analog fax machines over the Iridium network
- Supports transmission of data from analog data modems, credit card terminals, and data encryption devices over the Iridium satellite network
- LAN/WFI support to allow multiple users to access the same data link or data port from indoors or other areas where line-of-sight is not available
- Provides a uniform interface for different computers and PDAs to easily access the data port without specialized software
- Front end for multi-channel link aggregation
- Application platform for applications such as GPS tracking

### Rockwell Collins to Acquire Airshow, Inc.; Acquisition to Expand Company's Product Portfolio for Business, Commercial Aircraft

**CEDAR RAPIDS, Iowa (June 14, 2002)** - Rockwell Collins, Inc. (NYSE:COL), a global leader in aviation electronics and communications, has entered into a definitive agreement to acquire Airshow, Inc. a wholly-owned subsidiary of Acterna Corporation. By combining the product and systems capabilities of the companies, Rockwell Collins will better serve the cabin management and passenger information systems marketplace.

The transaction is subject to customary conditions to closing, including regulatory approvals and consents from Acterna's secured lenders. It is expected to close in the fourth quarter of Rockwell Collins' fiscal 2002.

The purchase price for Airshow is \$160 million and the transaction will be structured to allow Rockwell Collins to deduct goodwill for tax purposes. This goodwill deduction is estimated to have a net present value of \$35 million. The purchase is expected to be slightly dilutive to earnings for the fiscal year ending September 30, 2003 and accretive in subsequent years. Airshow's revenues were \$65 million for its fiscal year ending March 31, 2002.

"This acquisition will allow us to expand our capabilities for providing airborne electronic solutions to business aviation and commercial aircraft," said Clay Jones, chairman, president and CEO, Rockwell Collins. "With Airshow, we will increase our capabilities to provide high-quality, integrated solutions that bridge the flight deck and cabin for our customers around the globe."

This acquisition will bring together complementary capabilities of two leading companies. Airshow provides a comprehensive, integrated suite of cabin electronics systems for business aircraft, including cabin environmental controls, passenger information and entertainment, and business support systems. In addition, Airshow offers network capabilities and the "moving map," which displays an aircraft on its flight path, to both business and commercial aircraft customers. Rockwell Collins will incorporate these new capabilities into its current portfolio of products, while leveraging its reputation and expertise for delivering reliable avionics and communications products for the flight deck.

"This acquisition will enable us to enhance our relationships with business and commercial operators by offering them additional quality products and services for the cabin," said Bob Chiusano, executive vice president and COO, Rockwell Collins Commercial Systems. "The synergies we expect as a result of this acquisition, along with our combined expertise in airborne solutions, will enhance our ability to meet our customers' total aviation electronics needs."

Airshow is Rockwell Collins' second strategic acquisition this year and the eighth in the past five years. It delivers on the company's goal to supplement internal growth through acquisitions that complement and enhance Rockwell Collins' core aviation electronics and communications capabilities.

Airshow, headquartered in Tustin, Calif., employs approximately 330 employees at facilities in Tustin, Kirkland Wash · Wichita Kan · Newark Del · and Toulouse France

Airshow is Rockwell Collins' second strategic acquisition this year and the eighth in the past five years. It delivers on the company's goal to supplement internal growth through acquisitions that complement and enhance Rockwell Collins' core aviation electronics and communications capabilities.

Airshow, headquartered in Tustin, Calif., employs approximately 330 employees at facilities in Tustin; Kirkland, Wash.; Wichita, Kan.; Newark, Del.; and Toulouse, France.

Rockwell Collins provides design, production and support of aviation electronics and communications for government and commercial customers worldwide. Additional information is available at [www.rockwellcollins.com](http://www.rockwellcollins.com).

This press release contains statements (such as projections regarding future performance) that are forward-looking statements as defined in the Private Securities Litigation Reform Act of 1995. Actual results may differ materially from those projected as a result of certain risks and uncertainties, including but not limited to the risks inherent in the completion of any acquisition that is subject to closing conditions, integration of Airshow into Rockwell Collins' Commercial Systems business, the development and market acceptance of the products and services of the combined companies, demand for these cabin management and passenger information products and related services, economic and political changes in the domestic and international markets where Rockwell Collins competes, successful deployment of advanced technologies, competitive product and pricing pressures as well as other risks and uncertainties, including but not limited to those detailed from time to time in Rockwell Collins Securities and Exchange Commission filings, including without limitation the Rockwell Collins Annual Report on Form 10-K for the year ended September 30, 2001 and its quarterly reports on Form 10-Q for the quarters ended December 31, 2001 and March 31, 2002.

## Air Transport

 [Print Friendly Version](#)

Welcome to the Rockwell Collins Air Transport product catalog. This convenient resource provides quick and easy access to the latest information, specifications, and pricing for each of the Air Transport systems available for use in commercial aircraft (typically with greater than 100 seats).

The navigation bar on the left provides access to product and system descriptions, configuration, availability and detailed service and support information. Links to the systems are cross-referenced to the applicable aircraft platform, product line category, and an alphanumeric listing of the systems. Support services for these systems are covered under service support. Information such as order lead times, general conditions for sale, return policies, and other business conditions are detailed within special notices.

You may search the catalog for specific product offerings and pricing by Collins part number or equipment type number using the product index. For a comprehensive search of the catalog's system content, use the catalog search function. For further information related to the systems and services described here, use the contacts link to locate the appropriate contact information.

Prices within this catalog are valid for orders received between Jan. 1, 2005 and Dec. 31, 2006 provided delivery is scheduled prior to March 31, 2006.

To view Rockwell Collins' offerings within another market segment, click on the appropriate tab at the top of the page. For a comprehensive view of all Rockwell Collins products and systems, click on the Catalog Home tab.

It's a different world today. You just can't afford to be out of touch. Not in your office. Not at home. And not in your aircraft. With the Collins Tailwind 550 multiregion TV system you don't have to be. Designed for airline-class executive and VIP jet aircraft, the Collins Tailwind 550 represents a significant breakthrough in airborne TV. Collins Tailwind 550 offers the kind of content-rich, multiregion live programming you, your staff, and your associates need to stay informed and be entertained while flying.

Based on the proven Airshow line of satellite TV technology, Tailwind 550 offers significant improvements over previous-generation systems with improved reception, more-durable hardware and more channels available in more locations. Plus, Tailwind 550 is high-definition-ready and can be configured for multiple zones throughout the cabin. With combinations of up to eight unique programming receivers, the system provides flexibility to choose both personalized content and viewing location.

The Collins Tailwind 550 is a fully integrated system that enables private aircraft to receive Ku-band Direct Broadcast Satellite (DBS) television signals, providing access to the full spectrum of digital video and audio programming available from DBS satellites. The system takes these signals, automatically decodes them to the correct broadcast format, and then distributes them to cabin audio-video distribution or entertainment management systems.

# Tailwind 100

- TV Programming

Rockwell Collins' Tailwind 100 Airborne TV System provides a rich programming experience and reliable reception. It is a fully integrated system that enables private aircraft to receive Ku-band DBS (Direct Broadcast Satellite) television signals, providing access to the full spectrum of digital video and audio programming available from DBS satellites. The system takes these signals, automatically decodes them to the correct broadcast format, and then distributes them to aircraft on-board AV distribution or entertainment management systems. Now in its fourth generation, over 30% of the system was enhanced in late 2001 to improve performance and reliability, including:

- Improved holding torque at take-off and landing
- Enhanced antenna feed horn and RF components to increase signal gain
- Added forced air-cooled systems for greater reliability
- Enhanced capture and stability of the performing signal

## PERFORMANCE THAT WORKS FOR YOU

### HIGH TECHNOLOGY ON THE INSIDE

Collins Tailwind 500 can receive digital television signals in various DBS satellite footprints around the world, including the contiguous United States, Europe and the Middle East. A connection to the aircraft's navigation system allows Collins Tailwind 500 to automatically determine its location. Based on the configuration of onboard receivers and sensors, the system instinctively determines antenna direction, channel frequencies, polarization and which satellite receivers to activate.

Collins Tailwind 500 is capable of receiving programming from satellites over the entire Ku-band from 10.7 GHz to 12.75 GHz, and will accommodate circular satellite broadcast polarizations for the Western hemisphere and linear polarization for the Eastern hemisphere. Two digital broadcast formats, DVD International standard and DSS (DIRECTV standard), can be decoded by the system. The Tailwind 500 supports a wide variety of user control choices, from a simple infrared remote control to a detachable touch-screen.

### A WORK OF ART ON THE OUTSIDE

From live news and sports to movies and digital music, Collins Tailwind 500 ensures you can get personalized programming and subscription services that meet your needs. All with reliable, consistent performance and crystal clear reception. As part of Collins has collaborated with leading service providers to ensure maximum connectivity. DirectTV service covers the United States, it's throughout Europe, and Shogun to the Middle East. Along with extensive free-to-air channels, and up to eight unique programming receivers, it all adds up to the most comprehensive and diverse content available in the air.

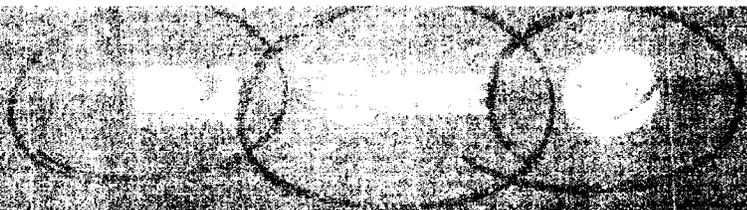

*Get reliable reception while taxiing on the ground or turning and climbing at over 500 miles per hour, even in extreme weather conditions.*

**YOUR SYSTEM IS ONLY AS GOOD AS YOUR ANTENNA.**

Collins Tailwind 500's DBS antenna unit contains two reliable core components: A tail-mounted single-lens antenna, which receives television signals, and a separate gimbal electronics module, which controls antenna movement and downconverts signals. Together, these two devices accomplish the same task as a single fuselage-mounted antenna. But dividing the work into two separate and replaceable units results in a system that is significantly smaller and lighter. That makes Collins Tailwind 500 ideal for use on most major types of medium to large business aircraft. Best of all, this more compact, efficient antenna delivers the same high level of reception and reliability that customers have come to expect from the Tailwind family.

**PROVEN PERFORMANCE FROM THE LEADER IN AVIONICS COMMUNICATION.**

It's a fact. The only results that matter are in your cabin. That's why Rockwell Collins has gone the extra mile to ensure Tailwind 500 delivers the kind of performance and reliability that ensures satisfaction. With Collins Tailwind 500 you get improved satellite signal tracking. Simpler installation that takes advantage of new automatic phase alignment and system leveling. The ability to permanently store system configuration data in non-volatile memory. And extensive research and field-testing in all three regions, even during extreme weather and heavy precipitation. The results are clear. Collins Tailwind 500 delivers industry-leading performance and reception, every time.

## Contiguous US Television Programming Provided by DirecTV®

Rockwell Collins works with DIRECTV, the #1 digital satellite entertainment service provider in the U.S., to deliver programming content to the Tailwind 100, 500 and 550 TV systems.

Rockwell Collins offers the following DIRECTV programming packages for the Tailwind 100, 500 and 550. Click below for complete channel listings.

Annual Subscription Package, including:

- Airborne Office Choice
- Entertainment Unlimited
- Music Choice
- Network Broadcast Channels

Seasonal Sports Package, including:

- Optional Sports Programming

Extra Programs, including:

- Optional Extra Programming

Notes on DIRECTV subscriptions:

1. One (1) year's Annual Subscription Package, Seasonal Sports Package, and Content Acquisition and Support are included at no charge with purchase of each DIRECTV receiver.
2. Annual Subscription Package required for purchase of Seasonal Sports Package. Content Acquisition and Support fee is required for all subscriptions.
3. Rockwell Collins bills customer annually in U.S. Dollars. Dealer discounts do not apply to TV programming prices. There are no refunds on cancellations of programming.
4. Sports programming contained in the Seasonal Sports Package is charged per season. Customer may purchase individual Premium Sports channels in place of the complete Seasonal Sports Package, upon request. Contact the Airshow Subscriptions Manager for quotes on individual channels.
