**UNITED STATES PATENT AND TRADEMARK OFFICE**

**SERIAL NO:** 77691645

**MARK:** TUNGDRILL

**\*77691645\***

**CORRESPONDENT ADDRESS:**

SARAH ANNE KEEFE  
WOMBLE CARLYLE SANDRIDGE & RICE,  
PLLC  
P.O. BOX 13069  
Research Triangle Park, NC 27709

**GENERAL TRADEMARK INFORMATION:**  
<http://www.uspto.gov/main/trademarks.htm>

**APPLICANT:** Tungaloy Corporation

**CORRESPONDENT'S REFERENCE/DOCKET**

NO:

49971

**CORRESPONDENT E-MAIL ADDRESS:**

skeefe@wcsr.com

**REQUEST FOR RECONSIDERATION DENIED**

**ISSUE/MAILING DATE:** 6/25/2010

Applicant is requesting reconsideration of a final refusal issued/mailed January 5, 2010.

The applicant (1) provided product information; and (2) argued against the Section 2(e)(1) descriptiveness refusal. No. (1) is acceptable.

However, after careful consideration of the law and facts of the case, the examining attorney must deny the request for reconsideration and adhere to the final action as written since no new facts or reasons have been presented that are significant and compelling with regard to the Section 2(e)(1) descriptiveness refusal.

The applicant has applied to register TUNGDRILL (Standard Character Drawing) for "Cutting tools for use with power operated machines, namely, drills and cutting inserts therefor."

"TUNG" is an abbreviation of the word "tungsten." See the excerpt from [http://www.acronymfinder.com/Tungsten-\(TUNG\).html](http://www.acronymfinder.com/Tungsten-(TUNG).html) attached to the June 8, 2009 Office action and the website excerpts from the examining attorney's searches of the internet using the Google and Bing search engines attached to this Office action and to the January 5, 2010 Office action.<sup>[1]</sup> "Tungsten" is "a hard lustrous gray metallic element with a very high melting point. Source: wolframite, scheelite. Use: high-temperature alloys, lamp filaments, **high-speed cutting tools**." See the excerpt from the *Encarta® World English Dictionary* (North American Edition 2009) attached to the June 8, 2009 Office action [emphasis added]. "DRILL" is the generic name for the applicant's goods, namely, "drills and cutting inserts therefor." See the excerpt from the *Encarta® World English Dictionary* (North American Edition 2009) attached to the January 5, 2010 Office action.

The applicant writes that "the goods to which the mark is applied are comprised of a compound that includes carbide (which is made with carbon and tungsten), cobalt and other materials with properties which impact the heat resistance, strength and wear of a product." "Tungsten carbide" is "a very hard gray compound, WC (or W2C), made by reaction of tungsten and carbon at high temperatures, **used in making engineering dies, cutting and drilling tools**, etc." See the attached excerpt from <http://www.encyclopedia.com/doc/1O999-tungstencarbide.html> [emphasis added]. The proposed mark is merely descriptive because the applicant's goods are "drills" made in part from "tungsten."

The applicant argues that:

[T]he Examiner has not shown that the component TUNG incorporated in Applicant's

mark is a commonly used, recognized, and understood synonym for the term “tungsten.” Absent a showing that TUNG is synonymous with “tungsten” and that “tungsten” is descriptive of cutting tools, the term TUNG cannot be considered descriptive of Applicant’s goods.

The evidence of record, which consists of an excerpt from [http://www.acronymfinder.com/Tungsten-\(TUNG\).html](http://www.acronymfinder.com/Tungsten-(TUNG).html) and website excerpts, shows that “TUNG” is an abbreviation for “TUNGSTEN” when used on or in conjunction with metal products that are made in whole or in part of tungsten, including cutting tools. The evidence attached to the June 8, 2009 Office action, which consists of website excerpts from the examining attorney’s search of the internet using the Google search engine, shows that the wording “tungsten drill” is used to describe drills, drill bits, and cutting inserts for drills that are made of tungsten. Notwithstanding the applicant’s arguments to the contrary, all the dots have been connected.

The applicant also argues that “TUNGDRILL has no meaning or significance in the English language or in the marketplace and therefore cannot be descriptive of the goods.” The fact that a descriptive word or term is not found in the dictionary is not controlling on the question of registrability. *In re Gould Paper Corp.*, 834 F.2d 1017, 5 USPQ2d 1110 (Fed. Cir. 1987); *In re Orleans Wines, Ltd.*, 196 USPQ 516 (TTAB 1977); TMEP §1209.03(b).

The applicant submitted printouts from the Office’s TARR database of five companion applications filed by the applicant, all of which contain the “TUNG” formative and all of which were approved for publication.<sup>[2]</sup>

Applicant submits that the allowance of the applications for Applicant’s other TUNG formative marks, similar in construction to the proposed mark, by the Trademark Office without objection, further illustrates that the component TUNG is not widely perceived or understood as an abbreviation of “tungsten.” Also, Applicant respectfully asserts, by allowance of these marks, the Trademark Office has decided that these marks are arbitrary or at the very least suggestive of the goods described in the respective applications, and therefore, are capable of serving as trademarks entitled to federal registration. The proposed mark TUNGDRILL is no less suggestive than Applicant’s other marks listed in the above table, and is therefore, also capable of serving as a trademark, and is entitled to federal registration.

The undersigned examining attorney is quite familiar with the applicant’s companion applications as she examined all of those applications and approved all of those applications for publication.<sup>[3]</sup> What differentiates the mark in the present application from the applicant’s other “TUNG” marks is that none of the other marks consists of the abbreviation for “tungsten” combined with the generic name of the goods. That is the reason why the Section 2(e)(1) descriptiveness refusal was made in this case and not in the others.

Accordingly, applicant’s request for reconsideration is *denied*. The time for appeal runs from the date the final action was issued/mailed. 37 C.F.R. §2.64(b); TMEP §715.03(c). If applicant has already filed a timely notice of appeal, the application will be forwarded to the Trademark Trial and Appeal Board (TTAB).

/Barbara A. Gaynor/  
Barbara A. Gaynor  
Trademark Examining Attorney  
Law Office 115  
571-272-9164

**STATUS CHECK:** Check the status of the application at least once every six months from the initial filing date using the USPTO Trademark Applications and Registrations Retrieval (TARR) online system at <http://tarr.uspto.gov>. When conducting an online status check, print and maintain a copy of the complete TARR screen. If the status of your application has not changed for more than six months, please contact the assigned examining attorney.

[1] Attached to this Office action are additional website excerpts from the examining attorney's latest search of the internet using the Bing search engine, which show that "tung" is an abbreviation of "tungsten" when used on or in conjunction with metal products made from tungsten.

[2] The marks in the five companion applications are TUNGTURN (Application Serial No. 77691679), TUNGTHREAD (Application Serial No. 77691674), TUNGREC (Application Serial No. 77691669), TUNGMILL (Application Serial No. 77691659), and TUNGCUT (Application Serial No. 77691638).

[3] Since publication, two of the five companion applications have been abandoned by the applicant, Application Serial No. 77691679 for TUNGTURN and Application Serial No. 77691659 for TUNGMILL.

The screenshot shows the Rose Mill materials processing website. The header includes the company logo and navigation links for Home Page, Online Products, and Bemol Lubricants. The main content area features a large image of a pile of Tungsten Disulfide Powder, its name, and a price range of \$79.00 to \$1,995.00. A description states that the powder has a high purity and an average particle size of 0.89-1.7 microns, and it can withstand temperatures of 950 F in atmosphere and considerably more in a non-oxygen environment. On the right side, there is a 'MAY WE ALSO SUGGEST' section with three product recommendations: PBC anti-scale and anti-pitting compound, Moll-Spray #3 aerosol spray lubricant, and Bemol #60 tungsten disulfide suspension.

### [Brite Beads](#)

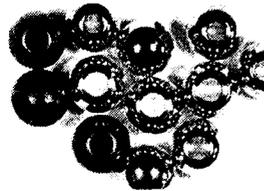

### [Spirit River, Hot Beads](#)

### [Tungsten Beads](#)

Bead head flies became popular on the alpine rivers of Northern Italy nearly a hundred years ago. Glass beads were first used as weight to help sink flies which were originally fished along the bottom of local rivers with spinning rods and reels. This method of fishing is still popular in the Tyrolean area today. Roman Moser is credited with inventing the first brass bead-head flies that started a fly tying revolution world wide. His unique style of flies were first tied in 1978. They employed a pearl-gold plastic bead directly behind the eye of the hook. They were especially productive for catching grayling. To add more weight for fishing deeper, a brass bead replaced the plastic bead. We first saw the Roman Moser fly patterns as they became available through Umpqua Feather Merchants in the mid-1980's. They were an instant success on our local rivers and started a revolution in fly tying that continues today. Now beads are counter-bored so that they can more easily be placed on a hook. The most popular beads are made from machined brass. Beads made from **tungsten** are even heavier per size, but much more expensive. Standard brass beads are now plated with gold, Nickel, black and copper colored finishes. Beads coated with bright colored baked-on enamel are popular with salmon & steelhead anglers. Beads have influenced the development and use of metal cone-heads and dumbbell shaped eyes. Beads are here to stay as fly tying components.

### **Brite Beads, Machined, Polished, Counter Bored Beads**

These beads from Spirit River are highly polished for an attractive finish and are counter-bored to fit a wide range of hook sizes. All beads are machined from brass and plated, except for the copper beads which are machined from real copper and then lacquered for a lasting finish. 25 beads per package.

**To:** Tungaloy Corporation ([skeefe@wcsr.com](mailto:skeefe@wcsr.com))  
**Subject:** U.S. TRADEMARK APPLICATION NO. 77691645 - TUNGDRILL - 49971  
**Sent:** 6/25/2010 6:00:30 PM  
**Sent As:** ECOM115@USPTO.GOV  
**Attachments:**

---

**IMPORTANT NOTICE REGARDING YOUR TRADEMARK APPLICATION**

**Your trademark application (Serial No. 77691645) has been reviewed. The examining attorney assigned by the United States Patent and Trademark Office (“USPTO”) has written a letter (an “Office action”) on 6/25/2010 to which you must respond (*unless the Office letter specifically states that no response is required*). Please follow these steps:**

**1.** Read the Office letter by clicking on this [link](http://tmportal.uspto.gov/external/portal/tow?DDA=Y&serial_number=77691645&doc_type=REC&1) [http://tmportal.uspto.gov/external/portal/tow?DDA=Y&serial\\_number=77691645&doc\\_type=REC&1](http://tmportal.uspto.gov/external/portal/tow?DDA=Y&serial_number=77691645&doc_type=REC&1)

**OR** go to <http://tmportal.uspto.gov/external/portal/tow> and enter your serial number to access the Office letter. If you have difficulty accessing the Office letter, contact [TDR@uspto.gov](mailto:TDR@uspto.gov).

**PLEASE NOTE:** The Office letter may not be immediately available but will be viewable within 24 hours of this e-mail notification.

**2.** Contact the examining attorney who reviewed your application if you have any questions about the content of the Office letter (contact information appears at the end thereof).

**3.** Respond within 6 months, calculated from 6/25/2010 (*or sooner if specified in the Office letter*), using the Trademark Electronic Application System (TEAS) **Response to Office Action form**. If you have difficulty using TEAS, contact [TEAS@uspto.gov](mailto:TEAS@uspto.gov).

**ALERT:**

**Failure to file any required response by the applicable deadline will result in the ABANDONMENT (loss) of your application.**

**Do NOT hit “Reply” to this e-mail notification, or otherwise attempt to e-mail your response, as the USPTO does NOT accept e-mailed responses.**
