Introduction to Healthcare Technology Management Online BMET Certification Course

- Anatomy & Physiology
- Healthcare Safety
- Electronics
- Medical Equipment
- Imaging Equipment
- Laboratory Equipment
- Information Technology

The International Standardization Organization (ISO) offers certification programs for biomedical, laboratory, and medical imaging equipment maintenance professionals. Obtaining the professional status of a Certified Biomedical Equipment Maintenance Technician (CBET) is no easy task. However, CBET certification signifies a significant level of commitment to one's career in biomedical equipment maintenance, and is respected throughout the healthcare field. Certified BMETs command a much higher salary than those who have not obtained professional certification.

The BiomedRx Institute provides training that empowers students to pass the CBET certification examination. Our curriculum mirrors the requirements of the examination, with in-depth study of the disciplines involved. In addition to theoretical, classroom training, we provide extensive hands-on training to familiarize the students with the disciplines and specific manufacturers and models of equipment.

Hospitals

Our consultative, technical and educational services are designed to ensure maximum efficiency and effectiveness of patient care, while maintaining an environment of care which complies with all regulatory agencies. Our representatives are professionals in the installation, repair, calibration and preventative maintenance of all modalities of biomedical and medical imaging equipment. We adhere to the highest standard of technical service in the medical device industry. All of our service visits are documented in hi-definition digital video, and provided to our clients online via this company extranet.

Manufacturers

BiomedRx provides an outsourced solution for medical equipment manufacturers seeking to expand their sales and service territories. Our representatives provide sales and service support on behalf of medical device manufacturers. We can provide your installation, repair, calibration, preventative maintenance and electrical safety inspection services in support of your standard or extended warranty. We also provide applications assistance and in-service education to your clinical and biomedical engineering staff.

ISOs (Independent Service Organizations)

The BiomedRx ISO network provides subcontracting opportunities for independent service organizations involved in the maintenance and servicing of medical equipment and support systems. Member organizations benefit from bulk purchasing discounts, technical training, and earnings opportunities in support of our asset management and manufacturer support services.

BMETs (Biomedical Equipment Maintenance Technicians)

BMETs benefit from association with BiomedRx in many ways. We are the first organization to offer online training for biomedical equipment maintenance technicians. We also offer many employment opportunities worldwide. BiomedRx is a home for the brightest and best minds in the biomedical engineering industry.

Industry Certification

The NTBA encourages its members to join the growing number of certified biomedical professionals. Becoming certified has many advantages from salary increase and possible promotion to confidence in one's future and proven dedication to the

profession. As incentive, NTBA awards a \$50 gift certificate and pays the following years membership dues for those members who earn an ICC certification.

The Board of Examiners for Biomedical Equipment Technicians, operating under the direction of the United States Certification Commission (USCC) and the ICC, maintains the certification programs for biomedical equipment technicians (CBET), radiology equipment specialists (CRES), and laboratory equipment specialists (CLES). ICC Certification for the Biomedical Equipment Technician (BMFT) is a formal recognition by the International Certification Commission for Clinical Engineering and Biomedical Technology (ICC) that individuals have demonstrated excellence in theoretical as well as practical knowledge of the principles of biomedical equipment technology.

One certification is not a prerequisite for another. Each certification CBET, CRES or CLES requires a separate, complete application and a separate examination. Applicants may test in only one discipline per examination.
