A. PREMIUM OIL COOLER FOR DYNA MODELS

This horizontally-mounted oil cooler was designed specifically for Harley-Davidson® to out-perform all other coolers in the industry. This cooler features a unique "Turbulator" system that efficiently distributes oil across the cooling chambers. The air fins feature several louvers to efficiently dissipate heat.

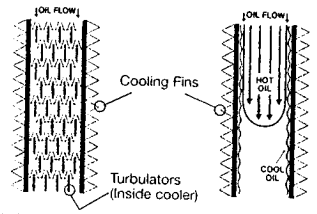
INSIDE VIEW OF PREMIUM OIL COOLER WITH TURBULATORS

INSIDE VIEW OF CONVENTIONAL OIL COOLER WITHOUT TURBULATORS



Turbulators disperse and mix oil inside cooler to provide more efficient cooling capabilities. The cooler oil is not allowed to remain along the boundaries of the flow tube as in conventional coolers.

Coolers without the Turbulator system allow oil to flow only in a straight path. Oil does not mix and the cooler oil remains along the outer boundaries, while the hotter oil remains along the center path of flow. Without the mixing effects of the Turbulators, the conventional oil cooler provides less efficient cooling capabilities.

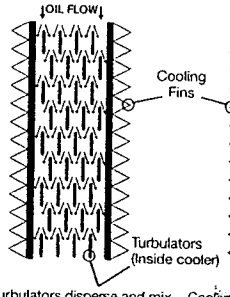
Oil Coolers

A. PREMIUM OIL COOLER FOR SOFTAIL® MODELS

This vertically mounted oil cooler was designed specifically for Harley-Davidson® to out-perform the other coolers in the industry. This cooler features a unique "Turbulator" design that efficiently distributes oil across the cooling chambers. The cooler features several louvers to efficiently dissipate heat. The unique and stylish adaptor plate incorporates the thermostat, and simplifies oil line routing for easy installation. Comes complete with mounting hardware.

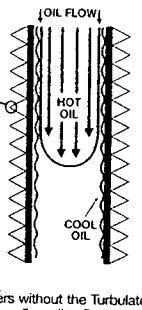
62913-00 Fits '00-later Softail models. (Will not fit with Oil Filter Cover P/N 62816-98. Will not fit with front spoiler.)

INSIDE VIEW OF PREMIUM OIL COOLER WITH TURBULATORS



Turbulators disperse and mix oil inside cooler to provide more efficient cooling capabilities. The cooler oil is not allowed to remain along the boundaries of the flow tube as in conventional coolers.

INSIDE VIEW OF CONVENTIONAL OIL COOLER WITHOUT TURBULATORS



Coolers without the Turbulator system allow oil to flow only in a straight path. Oil does not mix and the cooler oil remains along the outer boundaries, while the hotter oil remains along the center path of flow. Without the mixing effects of the Turbulators, the conventional oil cooler provides less efficient cooling capabilities.

Oil Cooler Adapter Assembly (not shown)

This black anodized billet aluminum adapter eliminates the lengthy oil cooler lines required for most aftermarket oil coolers. Standard in the H-D premium oil cooler kit, this adapter mounts between the filter mount and oil filter. Kit includes thermostat, gaskets, hardware and fittings.

MINI TACHS
Add style and function with these chrome-plated, 0-8,000 RPM mini tachometers. Measuring 2-5/8 inches in diameter, these chrome-plated tachs boast superior illumination and high-quality construction. The hard-coated lens is both fog and scratch-resistant and is ultrasonically welded to the case, resulting in a strong, reliable seal.

These tach kits deliver impressive accuracy and response. Our exclusive, balanced pointer design allows for a quick, precise needle sweep and minimal low idle flutter. Plus, reverse polarity and over-voltage protection ensures these quality tachs are immune to voltage surges, low-voltage interference and ignition coil inductive kick-back. Tested to the highest industry standards, each kit is specifically designed for each model, with styling that matches current speedometer graphics, including a lighted pointer. Complete wiring, hardware, chrome-plated bracket and installation instructions are included. (NOTE: Mini Tach Kits are not compatible with Windshield Bags.)

NOTE: These Harley-Davidson® seats are made of leather. Fine leathers or other natural materials WILL gain "character" such as wrinkles or wear, with age. This is normal. A fine, aged patina and character wrinkles are a sign of the extremely high quality materials used to construct your seat or backrest. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. Protect your investment with Leather Dressing P/N 98261-91V.

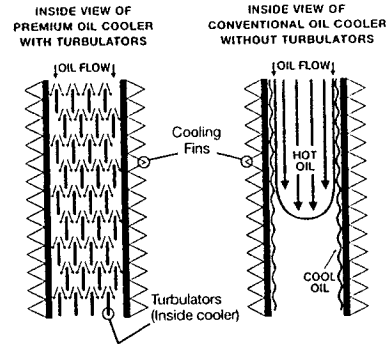
C. TWIN CAM 88® PREMIUM OIL COOLER FOR TOURING MODELS

This cooler was designed specifically for H-D® to outperform all other coolers in the industry and features a unique system to evenly distribute oil across the cooling chambers. The air fins are designed to efficiently dissipate heat. It includes a thermostat that allows oil flow to the cooler at 180 degrees F and higher, while restricting oil flow below 180 degrees. Mounting hardware is included. Will not fit with Original Equipment oil line cover, but will fit with Engine Transmission Interface Cover P/N 66003-99 and Chrome Oil Cooler Cover P/N 74601-99.

62868-99A Fits all '99-later Touring models. (Does not fit with Chrome Display Stand P/N 99002-97, Chrome Oil Hose Cover Kit P/N 37946-99 or with Sidecars.)



Turbulators disperse and mix oil inside cooler to provide more efficient cooling capabilities. The cooler oil is not allowed to remain along the boundaries of the flow tube as in conventional coolers.

Coolers without the Turbulator system allow oil to flow only in a straight path. Oil does not mix and the cooler oil remains along the outer boundaries, while the hotter oil remains along the center path of flow. Without the mixing effects of the Turbulators, the conventional oil cooler provides less efficient cooling capabilities.

D. CHROME OIL COOLER COVER

Add a beautiful accent to your Twin Cam 88 Premium Oil Cooler. This chrome cover is designed to allow proper air flow through the integrated duct work. Requires Permalex clear silicone RTV adhesive for installation.
