POWER PARTS

Forged from decades of experience at the track and on the street, Screamin' Eagle Performance Parts provide the very latest in performance technology with Harley-Davidson's quality and precision. From individual street-legal and

race-only components to pre-configured Stage Kits designed to achieve specific performance goals, Screamin' Eagle components deliver the juice to put you at the front of the pack.

THE RIGHT COMBINATION

Making performance upgrades entails striking the right balance between horsepower and torque, which means you should determine exactly how you're going to ride most often. For example, two-up travel benefits from more torque at lower RPM levels, while chasing the checkered flag typically calls for high horsepower at high RPM levels. While we try to provide usage guidelines for all Screamin' Eagle components, we can't test every possible combination. So please refer to the performance build-up dyno charts on the following pages, and remember to always consult with your Harley-Davidson dealer about performance-related issues.

CAMS AND COMPRESSION

Stock or moderate-lift "bolt-in" cams are most suited to stock-compression and smaller-displacement engines. Using a small-lift cam in high-compression applications typically puts a greater strain on your starting system. So make sure your starting system—which includes the battery, starter motor, cables and relays—is up to the task. In some extreme cases, such as with the installation of a high-compression "stroker" flywheel assembly, it may be necessary to install Screamin' Eagle manual compression releases in your cylinder heads so the engine turns over more easily on start-up.

VALVE SPRINGS

Changing cams may require the installation of new valve springs to accommodate a performance cam profile. When choosing a Performance Valve Spring Kit, consider both the RPM range and lift of the cams you're going to use—higher spring forces result in higher wear and friction, so you should never use a valve spring with a higher spring force rating than you need.

CLUTCH CONSIDERATIONS

Performance upgrades generally increase torque output, which can affect the clutch. When making performance enhancements, we recommend that you increase the torque capacity of your clutch with the installation of a Screamin' Eagle high-performance clutch spring or a complete clutch kit.

EFI AND PERFORMANCE

Electronic Fuel Injection (EFI) technology relies on an Electronic Control Module (ECM), a processor that determines the precise moment at which fuel is released into the cylinder to optimize engine performance. If any change is made to the engine and/or intake and exhaust systems of an EFI-equipped Harley-Davidson model, the ECM must be re-calibrated to maximize performance and prevent serious engine damage. Screamin' Eagle offers not only numerous EFI calibrations for pre-determined street-legal and race-only component combinations, but also complete EFI Tuner Kits for '01-later Softail and '02-later Touring models. EFI calibration is a highly technical matter, so always consult your dealer when considering performance enhancements.

This dyno-proven race exhaust system will leave your competitors baffled. How could so much performance come from such a good looking system? The secret is the exclusive large volume cross-over chamber that works with the baffle design to produce a low frequency muscular tone and superior flow characteristics. The 220 degree wrap-around heat shields are constructed from .16 gauge steel and polished and chrome-plated to a brilliant shine. Requires ECM recalibration. **For race application only.**

TWIN CAM 88 SCREAMIN' EAGLE CARBURETED PERFORMANCE CONFIGURATIONS

CROSSED FLAGS:

Harley-Davidson® motorcycles modified with some (Screamin' Eagle) performance engine parts must not be used on public roads and in some cases may be restricted to closed-course competition.

In this Screamin' Eagle section, all engine-related performance parts identified with the crossed flags symbol are intended for racing applications only and are not legal for sale or use in California on pollution-controlled vehicles.

Alterations of emission related components constitutes tampering under the US EPA guidelines and can lead to substantial fines and penalties. These configurations are not legal for sale or use in California on any pollution controlled motor vehicle. Intended for closed course competition only. May void limited vehicle warranty.

Configurations are intended for use with '99-later carbureted Twin Cam 88-equipped Dyna® models with staggered dual exhaust.

To build your own race motor, order each individual component part number within the list.

Corrected torque and horsepower measured at rear wheel on a Dynojet® Dynamometer. Your results may vary.

*Screamin' Eagle Slip-Fit Mufflers P/N 80063-95A have been replaced by Screamin' Eagle II Slip-Fit Mufflers P/N 80258-99A (Baloney Cut) or 80293-99A (Slash Down). We have seen similar performance results with these new mufflers on our Dynojet® chassis Dynamometer in these configurations.

C. SCREAMIN' EAGLE EFI RACE TUNER

This race-use only software package is a great product for making tuning adjustments to your fuel-injected Harley-Davidson racer and has much greater capabilities than most competitive EFI tuning products. The EFI Race Tuner software is divided into two modes. Tuning Mode, which allows you to tune certain variables of the EFI system, and Data Mode, which can record and graphically represent the tuning changes that have been made. This is exactly what racers of EFI-equipped Harley-Davidson motorcycles have been asking for...a way to tune their vehicle for ever-changing track conditions and performance product combinations. Data Mode can even produce horsepower and torque charts and multiple speed-to-distance estimates based upon the recorded data from your last run down the drag strip. The software is capable of monitoring up to 28 variables and with such sophistication, it is the ultimate tool for tuning and gaining that edge on the track. Performance is the key and this product comes complete with many race-use Screamin' Eagle calibrations, which may be downloaded and tuned to maximize the horsepower and torque of your EFI racer. The complete kit includes the tuning software on a CD, an electronic interface and the required cables to connect to a PC and the vehicle. The software also contains an electronic *User's Manual* that explains the Harley-Davidson EFI system and the EFI Race Tuner's capabilities. A. SCREAMIN' EAGLE TWIN CAM 88 PORTED "HTCC" HEADS

This head is for serious performance engine builders, and is the highest-flowing cylinder head available from Screamin' Eagle. This high-flow CNC ported version of our popular "HTCC" head has a 2.000" intake valve, 1.623" exhaust valve, and ports designed to produce big horsepower. This head is fitted with valve springs capable of withstanding .650" lift and revs up to 7,000 RPM. The unique combustion chamber shape requires the use of "HTCC" pistons (except in 103 C.I. Stroker applications). Use with Screamin' Eagle Intake Manifold P/N 29635-99. Sold in pairs. **For race application only.** NOTE: Due to excessive intake port modifications, do not use "HTCC" Intake Manifold P/N 29634-00.

A. SCREAMIN' EAGLE TWIN CAM 88 PORTED "HTCC" HEADS

B. SCREAMIN' EAGLE TWIN CAM 88 "HTCC" CYLINDER HEADS

The Screamin' Eagle HTCC (High Torque Combustion Chamber) Cylinder Heads will be the cylinder head of choice for racers who love the feeling of torque. New from the ground up, these heads have a high velocity "D-Shaped" intake port incorporating a step in the bowl area to minimize reversion. A larger 2" intake valve enhances low lift air flow to promote higher torque at lower RPM's. This new intake port requires the use of the HTCC Intake Manifold P/N 29634-00 for proper port match. The exhaust valve and port have also been redesigned. The exhaust valve has been reduced in size (as compared to the Screamin' Eagle Twin Cam 88 Performance Heads) from 1.623" to 1.550", and the exhaust port is now oval shaped to promote flow and improved exhaust scavenging. The uniquely designed combustion chamber utilizes multiple squish areas, which combine with the high dome piston to compact and excite the fuel/air mixture for a fast and efficient burn, with less possibility of detonation. Valve spring components are the same as used in the Twin Cam Performance Heads, and can handle cams up to .575" lift and 6500 RPM. Separate purchase of 1550 Big Bore Cylinders, HTCC Forged Pistons and HTCC Intake Manifold required for proper installation. **For race application only.**

E. SCREAMIN' EAGLE TWIN CAM 88 PERFORMANCE CYLINDER HEADS

Introducing a performance cylinder head for the Harley-Davidson® Twin Cam 88 engine from Screamin' Eagle, the performance leaders. We've combined the proven Screamin' Eagle valve train components and unique port shapes from our Evolution® 1340 cylinder heads with the Twin cam 88 engine "bathtub" combustion chamber to create a cylinder head that really performs. These heads offer a bolt-on compression ratio of 9.5:1 for a Twin Cam 88 (1450) and 10.0:1 for a Big Bore Twin Cam (1550). Combined with forged high compression pistons, both 1450 and 1550 engine configurations would achieve a 10.5:1 ratio. Use of Screamin' Eagle spark plugs P/N 32320-91 when flat-top pistons are used or P/N 32321-91 with high compression pistons is recommended. Best performance can be obtained by combining with one of our Screamin' Eagle valve spring cam accommodate up to .575" valve lift camshaft kits. **For race application only.**

C. SCREAMIN' EAGLE COMPRESSION RELEASE

These compression releases may be used to ease starting on high compression engines, especially Strokers. Releases are activated by pushing on the top before starting, which reduces cranking pressure, and allows the engine to spin over easier. After the engine starts they automatically close to restore full compression. Installation of these compression releases require machining of the cylinder head. This operation should only be performed by a competent machinist. Sold in pairs.

Performance cam designed to provide exceptional low and mid-range torque. These cams are also used in the S.E. Stage II EFI Kits. **For race application only.**

25937-99B

SE-204 Cam Kit

This cam produces peak horsepower around 5800 RPM and installation does not require any headwork or performance valve springs. Should be used in conjunction with open intake and exhaust. **For race application only.**

25149-00

SE-211 Cam Kit

This cam is better suited to added compression and performance valve springs, and offers good mid- to top-end power. A good match for the new "HTCC" Cylinder Heads or the Twin Cam 88 Performance Heads which contain the Performance Valve Springs and have a 10.5:1 compression ratio when used with high compression forged pistons. **For race application only.**

25152-00

SE-257 Cam Kit*

This cam delivers "high-end" horsepower you will feel in the straightaway. This cam requires increased compression for optimum performance. Works well in conjunction with forged pistons, Twin Cam 88 Performance Heads, and open intake and exhaust. (See caution below.) **For race application only.**

25155-00

SE-258 Cam Kit*

These cams have been designed exclusively for use in high compression, larger displacement (1550 or greater) applications. Peak power in the higher RPM ranges yet still pulls well in the lower ranges. Works well in conjunction with forged pistons, Twin Cam 88 Performance Heads, and open intake and exhaust. (See caution below.) **For race application only.**

25137-00

SE-260 Cam Kit*

This cam is designed around large displacement and high rpm engines. It's .609" lift is the largest in the SE cam offering and is suited for a high revving high HP engine. This cam should be used with higher compression, and performance intake and exhaust systems. An excellent choice for Screamin' Eagle 103" Stroker applications. **For race application only.**

25122-02 Fits '99-later carbureted
Twin Cam-equipped models.

***CAUTION:** Requires use of Screamin' Eagle Valve Spring Kit and Screamin' Eagle Adjustable Pushrods for installation and to ensure proper clearance. Failure to comply may result in engine damage.

Even if you fear your engine's days are numbered, you don't have to give up your bike to the big highway in the sky. Through the revolutionary Harley-Davidson® Engine Remanufacturing Program, we can put the rumble back into your Twin Cam 88® or 1340cc Evolution® engine.

It's quick, simple and a lot cheaper than buying a brand new bike or powerplant. And it might just make your engine even better than it was when it first rumbled to life.

ENGINE REMANUFACTURING

Engine is Disassembled

STEP ONE: GETTING STARTED

Your engine's journey begins at your Harley-Davidson dealership, where it will be removed from your bike and shipped in a specially designed container to our Capitol Drive facility in Wauwatosa, Wisconsin. Upon its arrival, your engine will be carefully unpacked by a member of the Remanufacturing team and completely disassembled.

Valve Seats are Recut

STEP TWO: DISASSEMBLY AND CLEANING

During disassembly, engine parts that can be cleaned and remanufactured to original specifications are saved, while those not worth saving are discarded. All reusable parts are then cleaned, stripped of any paint, and powdercoated to the latest production standards.

STEP THREE: REMANUFACTURING

Once powdercoated, these parts are remanufactured. They're machined, re honed and rebored to exact tolerances. And then they're

Cylinders are Honed

passed through rigid specification checks. Only components that meet our strict standards ever get any further.

STEP FOUR: REASSEMBLY

During reassembly, your engine begins to take its final form. Crankcases are set, bearings pressed and components meticulously reassembled. All chromed and polished parts are replaced with new ones. And your engine

Crankshaft Assembled

Lower End is Rebuilt

Rocker Arms are Assembled

is upgraded to meet the latest specifications whenever possible, while retaining its original configuration.*

STEP FIVE: TESTING

After it's reassembled, your engine is run and subjected to a battery of tests to ensure it performs to Harley-Davidson standards. If it makes the grade, your engine is instantly rewarded with a one-year, unlimited mileage factory warranty.

STEP SIX: DETAILING

After we determine that your engine runs like new, we make sure it looks like new with a final round of cleaning and polishing—just the final step in a process that includes all the latest cosmetic treatments. And then your engine is ready to come home.

STEP SEVEN: REINSTALLATION

Approximately two weeks after it left, your V-Twin will return in its custom shipping container with a new lease on life and its original

Vehicle Identification Number (VIN). Then your dealer will reinstall it. And you can enjoy the first mile, all over again.

The Engine Remanufacturing Program is available for the Evolution® 1340, Twin Cam® 88, Twin Cam® 88B, and Twin Cam® 95 Engines. For more information and warranty details, please contact your dealer.

**For legal and warranty purposes, all engines will receive stock camshafts. If you have installed high-performance cams, you will lose them unless you reinstall the stock versions before your engine is shipped.*

The Handlebar Collection

CHOOSING YOUR RIDING POSTURE

When all is said and done, your bike looks best when you are on it—it doesn't matter whether you are spinning the odometer on a cross-country ride or navigating parade duty on the Fourth of July. Either way, you are a part of your bike and the way you ride should be considered as you select accessories. Your seat, foot controls and handlebars may seem unrelated, but when you analyze riding positions you can see how they seamlessly integrate you with your bike. With that knowledge in hand, you can select accessories that not only look great together, but also provide a riding position that doesn't clash with the way you expect to ride.

Cruising

For a combination of comfort and style. Achieved with a low-seat height, buckhorn or sport handlebars and forward foot controls that provide a laid back posture.

Touring

For long-range comfort. Achieved with wide touring handlebars that, along with a standard foot position on pegs or floorboards, puts the rider in a natural upright position. A touring seat is a must, preferably with a backrest.

Profiling

For boulevard cruising. Achieved with Ape Hanger handlebars and the aggressive posture of forward foot controls, with a solo or stepped seat.

Sport

For tackling straight-aways and twisties. Achieved with flat or sport handlebars and a low-profile sport seat, with a natural or slightly pulled back foot position.

Garage Door Openers

A. REMOTE CONTROL GARAGE DOOR OPENER KIT

Operate your automatic garage door opener without leaving your motorcycle seat or without fumbling in your pocket for the remote control. Compatible with most brands of automatic openers, this kit allows you to operate your door by cycling the bike's high-beam switch. The hidden transmitter splices into your bike's wiring harness, and is powered by your vehicle battery, so there are no transmitter batteries to replace. When your key is switched off, the transmitter is disabled, providing added garage security if you park your bike outside. The signal is sent to the in-garage receiver that plugs into a standard 110-volt outlet and is wired to the automatic opener. The receiver's "Rolling Code" technology provides additional security. Kit includes one transmitter and one receiver. Individual components are available to equip additional bikes and garages.

91558-01 Fits '94-later XL and Touring models, '96-later Softail* and Dyna models, and '02-later VRSC models.

Two buttons can be set for use on multiple Remote Garage Door Openers. Indicator light shows Fob is working. Batteries included.

NEW

A. HARLEY-DAVIDSON® FACTORY SECURITY SYSTEM

Equip your 2000 - later Harley-Davidson VRSC, Dyna, Softail® or Touring model with the only security system designed and approved by The Harley-Davidson Motor Company.

When armed, the Security System disables the starter and ignition while monitoring the electrical system and vehicle motion with adjustable sensitivity. Minor disturbances trigger a momentary warning; major ones an unbroken thirty-second alarm after which the Security System returns to monitoring. A distinctive four-way flasher pattern is the alarm signal. An optional self-powered Smart Siren Kit adds a piercing scream, which sounds even if the battery cable is cut.

The Security System is armed and disarmed with a remote control waterproof key fob utilizing state-of-the-art rolling code technology. If the key fob is not available, the rider may arm or disarm the system by keying a previously entered personal code on the turn signal switches. A flashing status indicator informs the rider that the Security System is armed or disarmed.

When armed in the Transport Mode, the Security System disables the starter and ignition, but monitors only the electrical system, not vehicle motion. The vehicle may be moved, but electrical tampering triggers an alarm.

An Extended Storage Mode keeps the battery from discharging when the Security System is armed for extended periods of time.

The Security System is compatible with FL Touring models equipped with approved TLE/Ultra Sidecars when the system is configured as described in the SIDECAR OWNER'S MANUAL.

A. REMOTE CONTROL GARAGE DOOR OPENER KIT

Operate your automatic garage door opener without leaving your motorcycle seat or without fumbling in your pocket for the remote control. Compatible with most brands of automatic openers, this kit allows you to operate your door by cycling the bike's high-beam switch. The hidden transmitter splices into your bike's wiring harness, and is powered by your vehicle battery, so there are no transmitter batteries to replace. When your key is switched off, the transmitter is disabled, providing added garage security if you park your bike outside. The signal is sent to the in-garage receiver that plugs into a standard 110-volt outlet and is wired to the automatic opener. The receiver's "Rolling Code" technology provides additional security. Kit includes one transmitter and one receiver. Individual components are available to equip additional bikes and garages.

91558-01 Fits '94-later XL and Touring models, '96-later Softail® and Dyna models, and '02-later VRSC models.

Remote Control Garage Door Opener Transmitter

This kit allows owners of the Remote Garage Door Opener P/N 91558-01 to equip each of their Harley-Davidson motorcycles with a remote transmitter.

91561-01 For use with Remote Control Garage Door Opener P/N 91558-01.

91562-01 For use with Remote Control Garage Door Opener P/N 91558-01.

REMOTE CONTROL GARAGE DOOR OPENER TOUCH PAD

This completely wireless Touch Pad Controller offers fingertip access to your Harley-Davidson® Remote Garage Door Opener. The key-pad is covered for weather protection, and backlit for easy night operation. The "rolling code" technology provides added security. Batteries included.

1. 91575-01 For use with Remote Garage Door Opener P/N 91558-01.

REMOTE CONTROL GARAGE DOOR OPENER KEY FOB

Operate your Harley-Davidson Remote Garage Door Opener from your car. This Key Fob fits on your key ring, and works with the "rolling code" technology of the receiver to provide added security. Because up to eight devices can be programmed for use with a single Remote Garage Door Opener Receiver, everyone in your family can have access. Two buttons can be set for use on multiple Remote Garage Door Openers. Indicator light shows Fob is working. Batteries included.

2. 91569-01 For use with Remote Garage Door Opener Kit P/N 91558-01.

Engine Oil

GENUINE HARLEY-DAVIDSON® MOTORCYCLE OIL.
Harley-Davidson's Genuine H-D® 360 Motorcycle Oil is the only oil developed and tested exclusively for use in Harley-Davidson motorcycles. Our unique additive package helps prevent engine wear and helps keep your engine cooler, cleaner, free of sludge, varnish and corrosion.

Harley-Davidson V-Twin motorcycles operate at higher temperatures than water-cooled automobiles, thus a specific high temperature additive package is necessary to protect the engine. Be assured, H-D 360 is the only oil that should be trusted in a Harley-Davidson V-Twin engine.

Available in SAE 10W40, SAE 20W50, SAE 50, and SAE 60. Refer to your Harley-Davidson owner's manual for the proper SAE grade recommendation based on the climate and temperature range you ride in.

PROTECT YOUR HARLEY-DAVIDSON® WITH H-D® 360 MOTORCYCLE OIL.

What Goes Into Harley-Davidson® Motorcycle Oil?

Harley-Davidson Motorcycle Oil is unlike off-the-shelf oils. H-D® 360 is a complex mixture of carefully selected premium quality mineral oil and an exclusive performance additive package. Designed for maximum performance in H-D V-Twin engines, H-D 360 is a unique oil for a unique application.

H-D® 360 — More Than a Logo — A Performance Rating System

The name Harley-Davidson 360 has its roots in the testing criteria applied to certify this new oil. More than just a dynamometer test, it is a designation of an entirely new performance rating system. To earn the name H-D 360, this oil had to outperform all others on a full round of tests. Laboratory bench testing measured viscosity retention and oxidation stability. Next, the oil was run on the open road under high ambient temperatures and high load conditions. After each test, the engineers performed a complete engine tear-down and analysis. Plenty of oils vied to carry the name Harley-Davidson, but only one oil met the challenge: H-D 360.

What viscosity grade should I use in my Harley®?

The recommended viscosity grade for all temperature conditions is SAE 20W50 Harley-Davidson Motor Oil. SAE 10W40 H-D Motorcycle Oil is also available and appropriate for low temperature climates. The SAE 50 H-D Motorcycle Oil is satisfactory in ambient temperatures of 60-80°F, and the SAE 60 H-D Motorcycle Oil in ambient temperatures above 80°F. SAE 20W50 covers the broadest range of operating temperatures.

What does Harley-Davidson motorcycle oil do for my engine?

It provides the best lubrication you can buy and:

- Protects the engine from rust and corrosion.
- Keeps the engine clean.
- Cools engine parts.
- "Seals in" combustion pressure.
- Prevents foaming.
- Permits easy starting at a wide range of temperatures.
- Provides quick oil circulation.
- Reduces friction and power loss.

How often should I change my motorcycle engine oil?

You should change your motorcycle engine oil and engine oil filter at the first 500 mile service interval and at every 5,000 mile service interval thereafter. If you ride your motorcycle hard, under dusty conditions, or in cold weather, the engine oil and filter should be changed more often. You should always change your engine oil and filter prior to winter storage (or any extended storage) so that your engine oil is clean and free of contaminants for this time period.

Can I go longer between oil changes by changing the filter?

NO! The job of the oil filter is to remove dust, soot and other solid matter. But it cannot remove water, gasoline or acids. And, it can't do the job of additives that have been used up. Follow the recommended oil and oil filter changes in your Harley owner's manual.

746 Maintenance Fluids

A. GENUINE HARLEY-DAVIDSON® FLUIDS

Some Facts You Should Know About Genuine Semi-Synthetic Transmission Fluids and Sport-Transmission Fluid:

Unique products developed specifically for Harley-Davidson® transmissions to provide superior lubrication. Consider these unique performance features:

- Maintains Viscosity (doesn't thin out).
- Conventional gear lubes or motor oils can actually be sheared by the high-speed action of the drive gears. The result is a loss of viscosity or thinning out in service and high wear to the gear teeth.
- These products are designed to withstand this shearing action and maintain viscosity between services.
- Superior lubrication over wide temperature ranges. These fluids are not affected by changes in temperature as much as conventional lubes or oils.
- Fights corrosion and wear. H-D's Semi-synthetic Transmission Lube and Sport-Trans Fluid contain special additives to protect against rust and corrosion. They also contain potent high film-strength anti-wear additives to handle heavy loads placed upon the drive gears.

Sport-Trans Fluid (Sportster®)

Harley-Davidson Parts and Accessories Division, a facility of Harley-Davidson Motor Company, recently achieved certification to its ISO 9001 International Quality Standard registration.

CAUTION: It is possible to overload your motorcycle's charging system by adding too many electrical accessories. If your combined electrical accessories consume more electrical current than your vehicle's charging system can produce, the electrical consumption can discharge the battery and cause vehicle electrical system damage. Ask your dealer for advice about the amount of current consumed by additional electrical accessories.

IMPORTANT: To the best knowledge of Harley-Davidson, the specifications, descriptions and illustrative material contained herein are accurate as of the date this catalog was approved for printing (June, 2002). Harley-Davidson reserves the right without prior notice to discontinue at any time at its discretion any of the parts and accessory items depicted herein or change specifications or designs or prices without incurring any obligation to the customer. All parts and accessory items are also subject to availability and to prior sale by our dealers.

The only way to get Genuine Motor Parts and Accessories is through an authorized Harley-Davidson® dealer. For a dealer near you, use our dealer locator at harley-davidson.com, where you can check out Genuine Motor Parts and Accessories on the Web. And keep an eye out for our online fitment database, coming in October 2002.

We care about you. Sign up for a Motorcycle Safety Foundation Rider Course today (for a course near you call 1-800-447-4700). When enjoying your Harley-Davidson motorcycle, be sure to ride safely and within the limits of the law and your abilities. Ride with your headlight on and watch out for the other person.

Always wear a helmet, proper eyewear and appropriate clothing and insist your passenger does too. Never ride while under the influence of alcohol or drugs. Know your own Harley and read and understand your owner's manual from cover to cover. Protect your privilege to ride by joining the American Motorcyclist Association.
