NOTE: These Harley-Davidson® seats are made of leather. Fine leathers or other natural materials WILL gain "character", such as wrinkles or wear, with age. This is normal. A fine, aged patina and character wrinkles are a sign of the extremely high quality materials used to construct your seat or backrest. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. Protect your investment with Leather Dressing P/N 98261-91V.

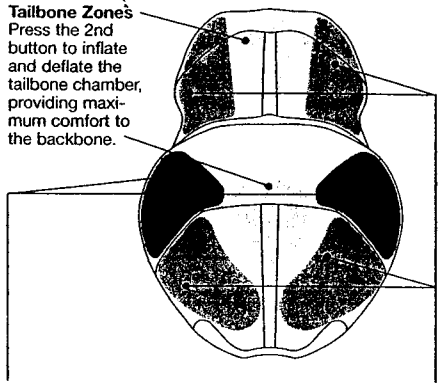
The seats come with a protective, water-resistant cover and are easy to install. Patented. So grab a seat. And enjoy the ride.

Tailbone Zones
Press the 2nd button to inflate and deflate the tailbone chamber, providing maximum comfort to the backbone.



Lower Back Zones

A. SCREAMIN' EAGLE EFI RACE TUNER

Updated to include '04 models, V-Rod® tuning capabilities and calibrations for 103 CI Stroker engines. This race-use only software package is a great product for making tuning adjustments to your fuel-injected Harley-Davidson racer and has much greater capabilities than most competitive EFI tuning products. The EFI Race Tuner software is divided into two modes. Tuning Mode, which allows you to tune certain variables of the EFI system, and Data Mode, which can record and display real-time vehicle data. It can then graphically represent the tuning changes that have been made. This is exactly what racers of EFI-equipped Harley-Davidson® motorcycles have been asking for...a way to tune their vehicle for ever-changing track conditions and performance product combinations. Data Mode can even produce horsepower and torque charts and multiple speed-to-distance estimates based upon the recorded data from your last run down the drag strip. The software is capable of monitoring up to 28 variables and with such sophistication, it is the ultimate tool for tuning and gaining that edge on the track. Performance is the key and this product comes complete with many race-use Screamin' Eagle calibrations, which may be downloaded and tuned to maximize the horsepower and torque of your EFI racer. The complete kit includes the tuning software on a CD, a communications interface that electronically locks to the ECM, and the required cables to connect to a PC and the vehicle. The software also contains an electronic *User's Manual* that explains the Harley-Davidson EFI system and the EFI Race Tuner's capabilities. This manual can be referred to as you are tuning on the track or in the pits. Installation and effective tuning requires a high degree of skill and therefore dealer installation is required. Minimum PC requirements are Windows 98, CD-ROM drive, serial port, 32 MB RAM, and 10 MB hard drive space. **For race application only.**

32107-01B	Fits '01-later EFI Softail® models, '02-later EFI Touring models, '04-later EFI Dyna and '02-later VRSC models.	**$459.95**

C. SCREAMIN' EAGLE TWIN CAM 88® "HTCC" CYLINDER HEADS*

The Screamin' Eagle HTCC (High Torque Combustion Chamber) Cylinder Heads will be the cylinder head of choice for racers who love the feeling of torque. These heads have a high velocity "D-Shaped" intake port incorporating a step in the bowl area to minimize reversion. A large 2" intake valve enhances low lift air flow to promote higher torque at lower RPM's. This intake port requires the use of the HTCC Intake Manifold P/N 29634-00 for proper port match. The exhaust valve and port have also been redesigned. The exhaust valve has been reduced in size (as compared to the Screamin' Eagle Twin Cam 88 Performance Heads) from 1.623" to 1.550", and the exhaust port is now oval shaped to promote flow and improved exhaust scavenging. The uniquely designed combustion chamber utilizes multiple squish areas, which combine with the high dome piston to compact and excite the fuel/air mixture for a fast and efficient burn, with less possibility of detonation. Valve spring components are the same as used in the Twin Cam Performance Heads, and can handle cams up to .575" lift and 6500 RPM. Separate purchase of 1550 Big Bore Cylinders, and HTCC Intake Manifold required for proper installation. Heads are machined to accept Compression Release Kit P/N 29298-02. **For race application only.**

Fits '99-later Twin Cam models equipped with Big-Bore Cylinders. EFI models require ECM recalibration through applicable calibration cartridge or through EFI Race Tuner Kit. See EFI Race Tuner Kit for fitment or calibration matrix for possible applications.

E. SCREAMIN' EAGLE COMPRESSION RELEASE

These compression releases may be used to ease starting on high compression engines, especially Strokers. Releases are activated by pushing on the top before starting, which reduces cranking pressure, and allows the engine to spin over easier. After the engine starts they automatically close to restore full compression. Installation of these compression releases may require machining of the cylinder head. This operation should only be performed by a competent machinist. Sold in pairs. **For race application only.**

29298-02	Fits all Screamin' Eagle Twin Cam Cylinder Heads.	**$84.95**

A. SCREAMIN' EAGLE® STROKER FLYWHEEL AND ROD ASSEMBLY

These Stroker flywheels provide 103 cubic inches of raw power for any Twin Cam engine, including Softail® Twin Cam 88B™, by increasing your stock stroke from 4" to 4-3/8". The flywheels and rods are made from high strength forgings, then fully machined to their final shape, then balanced. The assembly makes use of the Original Equipment (straight press) crankpin and bearings, which means you get proven durability. Stroker installation requires Big Bore Stroker Pistons and Big Bore Cylinders. To maximize the performance potential, additional Screamin' Eagle performance parts such as camshafts, performance cylinder heads, performance carburetor, ignition, and open intake and exhaust are recommended. **For race application only.**

ENGINE PROGRAMS

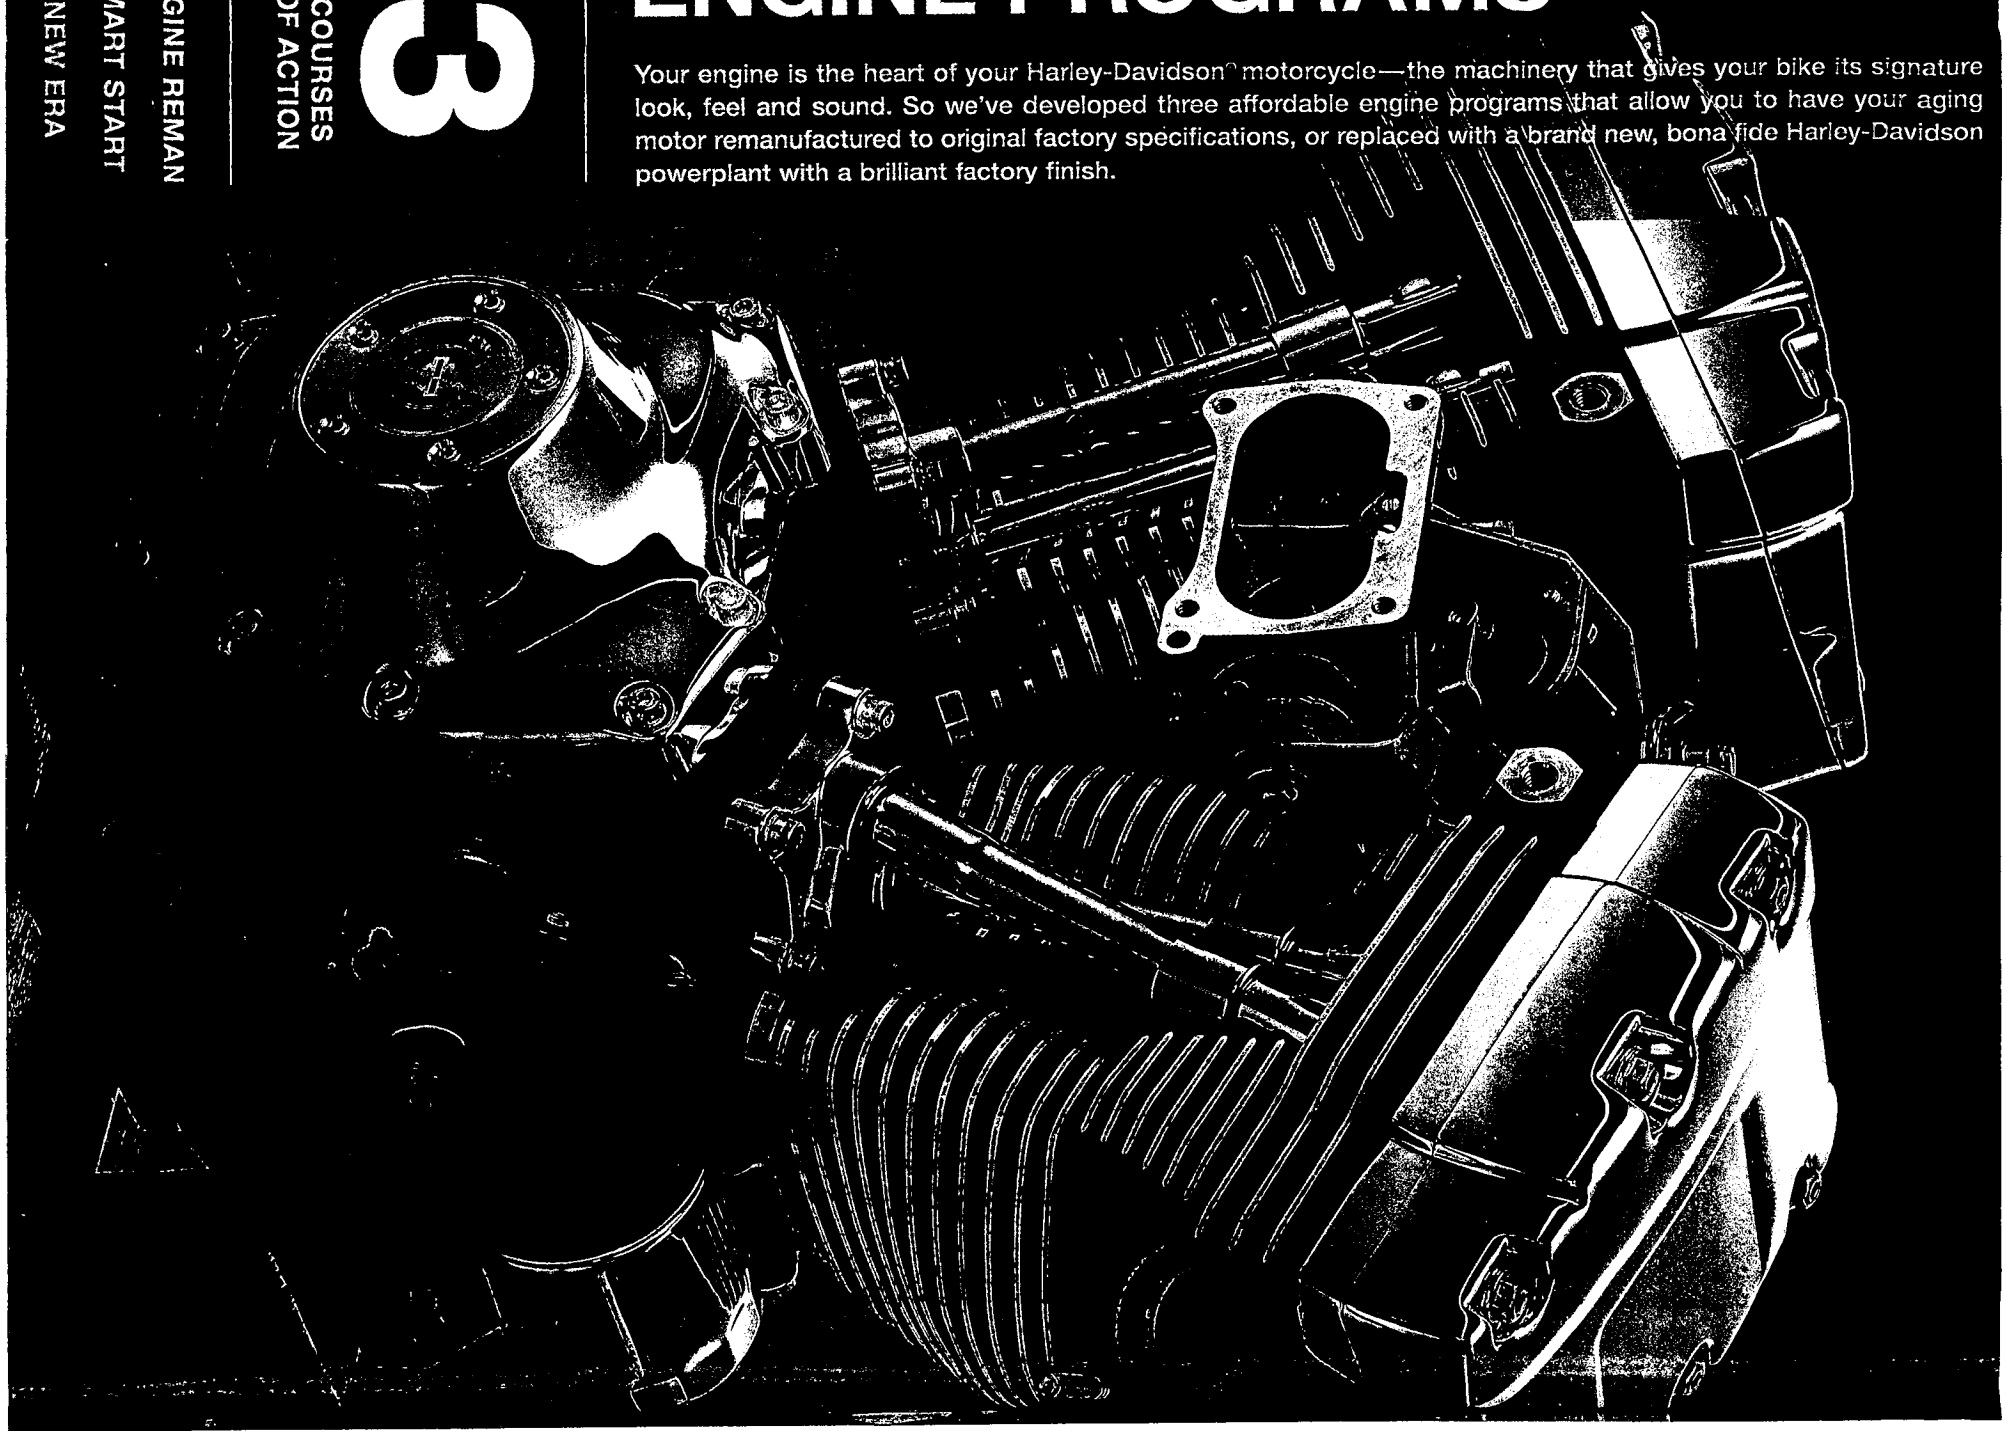
Your engine is the heart of your Harley-Davidson® motorcycle—the machinery that gives your bike its signature look, feel and sound. So we've developed three affordable engine programs that allow you to have your aging motor remanufactured to original factory specifications, or replaced with a brand new, bona fide Harley-Davidson powerplant with a brilliant factory finish.

3 COURSES OF ACTION

ENGINE REMAN

SMART START

NEW ERA



ENGINE REMANUFACTURING

For Evolution® 1340 and Twin Cam® Engines

When the miles start to add up, the Harley-Davidson® Engine Remanufacturing Program can put the rumble back into your powerplant simply, quickly and affordably.

The program is available for the Evolution® 1340, Twin Cam 88,® Twin Cam 88B™ and Twin Cam 95™ engines. Contact your dealer for more information.

STEP 1
Shipping

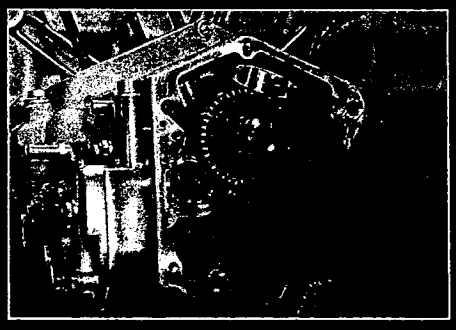
Your Harley-Davidson dealer will remove your engine and ship it to our Capitol Drive facility, in Milwaukee, where it will be unpacked and prepped for disassembly.

STEP 4
Reassembly

Crankcases are set, bearings pressed and parts reassembled. Chromed and polished parts are replaced. And your engine is upgraded to meet the latest specifications, where possible.*

STEP 2
Disassembly

Engine parts that can be remanufactured to original specs are saved, while others are discarded. All reusable parts are cleaned and powder coated.

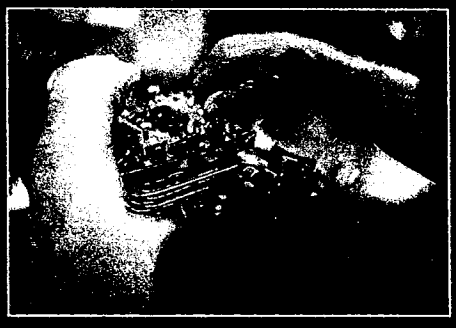


STEP 5
Testing and Detailing

Your engine is hot-tested to Harley-Davidson standards. If it passes, it receives a one-year unlimited mileage factory warranty. Then, after a final round of cleaning and polishing, your engine is packed for shipping.

STEP 3
Remanufacturing

Reusable parts are machined, rehoned and rebored to exact tolerances, and then passed through rigid specification checks. If they make the cut, they go on.



STEP 6
Reinstallation

About two weeks after it left, your engine—bearing its original Vehicle Identification Number (VIN) will return to your dealer, who will reinstall it.

SMART START

For Evolution® 1340 Engines

If you'd rather replace your Evolution motor than get it remanufactured, the Smart Start Engine Program offers brand new, Harley-Davidson built and factory-tested Evolution 1340 engines at an unbeatable price—in the standard Silver and Polished or classic Black and Chrome finish. Matching Black and Chrome or Silver Painted Softail® transmissions are also available.

NEW ERA

For Twin Cam® Engines

Through the New Era Engine Program, you can purchase a fresh-off-the-line, factory-built and tested Twin Cam 88, 88B, 95 or all-new 103 cubic inch "Stroker" engine manufactured to the latest model year specifications—in a Silver and Polished, Silver and Chrome or Black and Chrome finish. You can also get a matching transmission to complete the custom look.

**For compliance and warranty purposes, all engines will receive stock camshafts. If you have installed performance cams, you will lose them unless you reinstall the stock versions before your engine is shipped.*

SMART START ENGINE PROGRAM
Since the first single cylinder built in 1903, engines have been the heart and soul of Harley-Davidson history. Each motor has made its unique contribution, and the V2 Evolution engine is no exception. With the Smart Start Engine Program, buying a new Evolution engine has never been easier. When replacing your Evolution motor, Smart Start offers brand new, factory-tested engines at an unbeatable price. Choose the standard Silver and Polished Evolution or the classic Black and Chrome. Either way, you won't just be making a new start, you'll be making a smart start. Carburetor, manifold, and timer cover not included.

CONTOURED CHROME AND RUBBER CUSTOM HEATED HAND GRIPS

Keep comfortable on those cool morning or frigid night rides. Warm hands have a major impact on overall body comfort, and sometimes, gloves just aren't enough. These thermostatically controlled grips have variable heat settings and automatic temperature monitoring to adjust to changing ambient temperatures. The grips remain at a constant temperature regardless of changes in outside temperatures. The self-contained control circuit and control knob means you have no additional switches or controller boxes to mount, and the grips are switched on/off with the ignition to avoid draining your battery. The "glueless" grip design allows grip removal if you change handlebars or motorcycles. Patent pending.

HANDLEBAR BASICS
Bars communicate style and also affect how you handle your bike. You want to select a handlebar that puts your arms in a position that matches both the attitude you want to convey and the kind of riding you expect to do. While every handlebar has its own distinct measurements and characteristics, there are four basic styles to consider in your quest for custom-styled comfort:

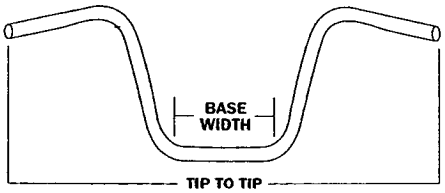
APE HANGERS
Pure custom attitude, best suited for boulevards and long straightaways.

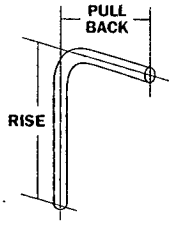
DRAG BAR
A flat, no-nonsense handlebar for an aggressive riding style.

SPORT BAR
Lower and wider bar for a slightly upright, forward leaning position.

PULL BACK
Brings handgrips closer to the body for a more upright riding posture.

HANDLEBAR MEASUREMENTS





RISE is the vertical distance between a handlebar's tip and its base. Adding risers to bars that sit low can help put hand grips in a higher spot.

PULL BACK brings hand controls closer while also lowering grip height. More pullback facilitates an upright posture, and suits riders with a shorter reach.

WIDTH is measured from the tip of one hand grip to the other. Touring calls for a wider bar, while sport riding is best with a lower tip-to-tip width.

*NOTE: Installation of some handlebars may require a change in clutch and/or throttle cable and brake hose for some models. Handlebar height is regulated in many states. Check state or local laws before installation.
