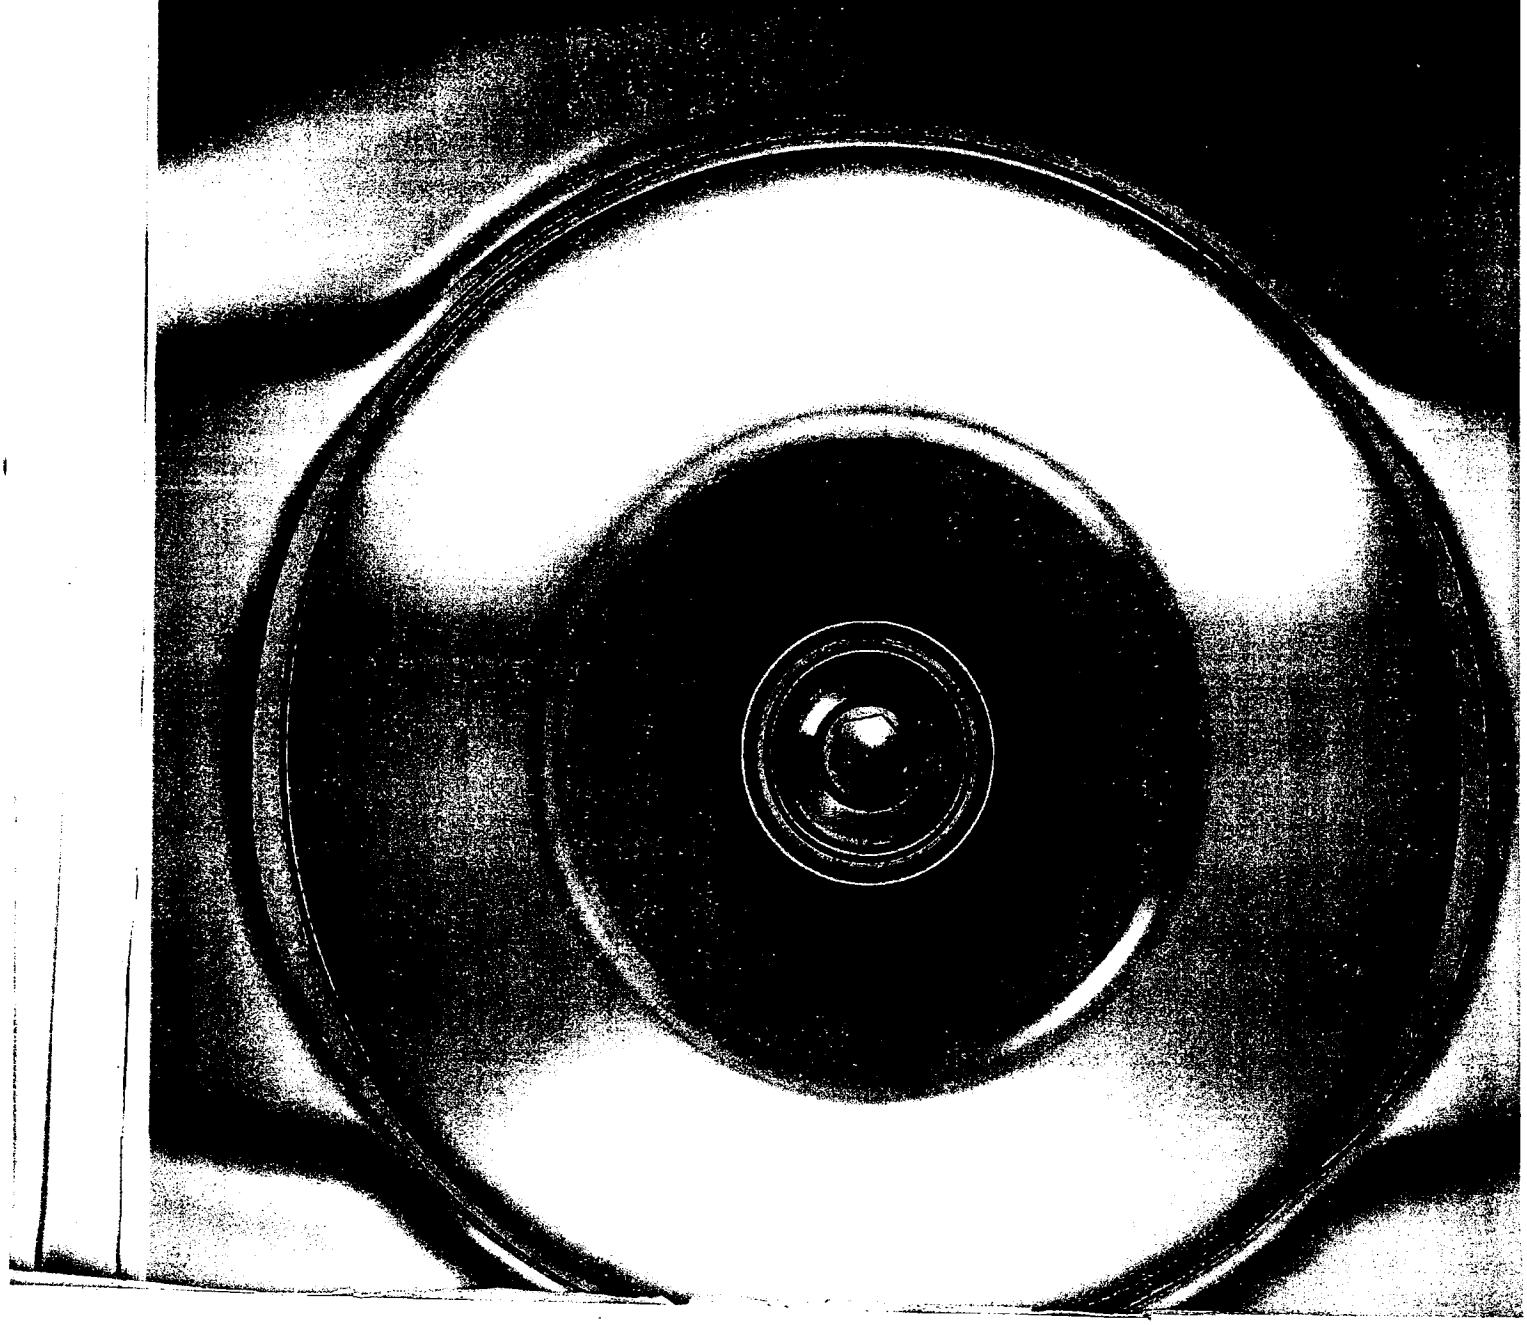
Part 8 of 11

Processed by Duane Foster

When you do battle on the street, it's the day-to-day riding conditions that offer the greatest competition. Merging into traffic on a fast-moving freeway. Passing a slow-moving RV on a winding rural road. Climbing a long grade loaded down with a passenger and gear. Screamin' Eagle® street-legal performance parts are engineered to meet the challenge.

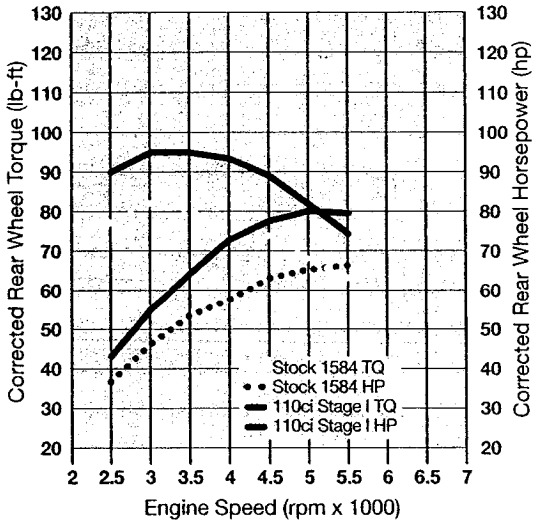


Screamin' Eagle® street-legal performance configurations are engineered to balance the demand for performance, reliability and social responsibility. Factory-tested to maximize everyday ridability, Screamin' Eagle Street Performance parts deliver the aggressive performance and sound you expect from a Harley-Davidson® motorcycle. And you can ride with confidence, because dealer-installed street-legal EFI Stage Kits and Street Performance Mufflers won't void your new model warranty.

HORSEPOWER AND TORQUE

While many judge a motorcycle's performance solely in terms of horsepower, torque is an equally, if not more, important factor in the equation. In a nutshell, torque is the twisting force that gets your bike moving, while horsepower is the effort required to keep it moving—meaning that torque influences acceleration and horsepower determines velocity. Your goal should be to reach the balance between horsepower and torque that most closely matches the performance you need.

THE DYNO CHART



An invaluable tool in performance modification, dyno charts can directly compare, in visual terms, the performance characteristics of a stock configuration with those of a modified configuration—which can help you decide if a particular set-up will generate the power gains you're after. The horizontal, or "x," axis indicates engine speed in RPM. The left vertical, or "y," axis shows the amount of torque generated in foot-pounds, while the right y-axis indicates the horsepower produced. There are four curves in all—one for stock torque, one for modified torque, one for stock horsepower and one for modified horsepower. Each curve can tell you how a configuration performs in a specific RPM range. And it can also tell you where the effects really kick in and where they begin to flatten out.

A. SCREAMIN' EAGLE® 6-SPEED TRANSMISSION AND GEAR SET

Now available with your choice of Hydraulic or Cable Clutch Release. Add a Screamin' Eagle 6-Speed Transmission to your Custom Vehicle Operations (CVO) motorcycle with Original Equipment hydraulic clutch, or any models equipped with Harley-Davidson® accessory hydraulic clutch system.

Designed from the ground up, the Screamin' Eagle transmission incorporates many of the best Original Equipment features, like late-style shifting mechanism and a newly designed "shift ring" system to make this the smoothest shifting Harley-Davidson® transmission available. The "shift ring" system is similar to the system used in the VRSC™ transmission, and it slides on the shafts to mate into the gears. This eliminates sliding heavy gears to accomplish the shift, and results in smooth, precise and light effort shifting. Sixth gear is a true overdrive, at a .89:1 ratio, and the first five gears mimic today's proven 5-speed ratios. The overdrive feature allows you to run a lower engine RPM in sixth gear, at any given road speed. Lower RPM can result in lower vibration, longer engine life and smoother cruising. The Screamin' Eagle 6-Speed Transmission is available as a complete transmission, or as a replacement gear set, and can be matched with Hydraulic or Cable-operated clutch controls.

Screamin' Eagle 6-Speed Transmissions feature forged chrome "trap door", forged shifter forks and forged and precisely ground gears. No speedometer or exhaust mount modifications are required. Complete transmissions are ready to install into the chassis, and the 6-Speed Gear Set Kits are designed to replace the stock gear set without removing the transmission. Gear Set Kits require slight modification (template included) to the Original Equipment transmission case, and include all necessary installation hardware.

Installation may require separate purchase of vehicle-specific Hydraulic or Cable-operated Clutch Side Cover Release Kit. The forged side covers feature the "Screamin' Eagle" script and bold "6 Speed" logo laser-etched into the mirror-chrome surface.
See page 551 for applications.

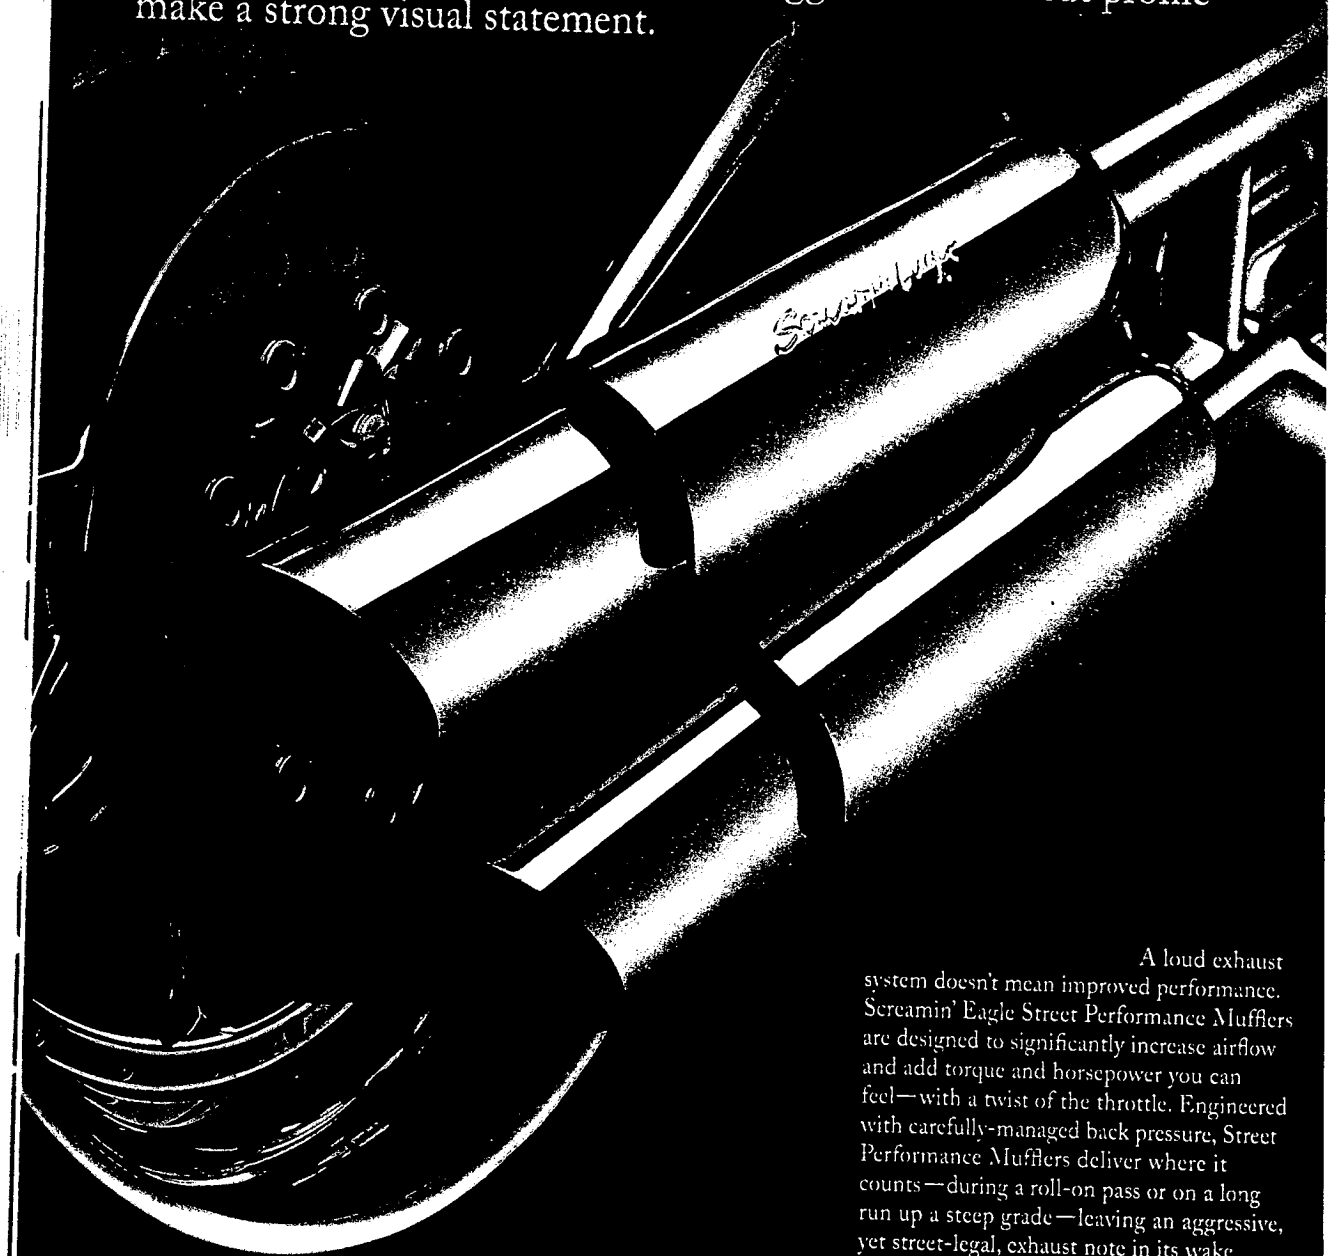
The sound and the look. It's the heart of the Harley-Davidson® experience... and Screamin' Eagle® Street Performance Mufflers deliver both. Available for 2007 Sportster, Dyna, Softail and Touring models, Street Performance Slip-On Mufflers produce rich sound and increased performance over a wide RPM range. And the unique large-diameter ballistic shape and the aggressive slash-cut profile make a strong visual statement.



A loud exhaust system doesn't mean improved performance. Screamin' Eagle Street Performance Mufflers are designed to significantly increase airflow and add torque and horsepower you can feel—with a twist of the throttle. Engineered with carefully-managed back pressure, Street Performance Mufflers deliver where it counts—during a roll-on pass or on a long run up a steep grade—leaving an aggressive, yet street-legal, exhaust note in its wake.

C. SCREAMIN' EAGLE® ACTIVE PERFORMANCE MUFFLER KIT

The best of both worlds. This street-legal exhaust system provides the horsepower and torque characteristics of Screamin' Eagle Pro Race-Use Mufflers while maintaining EPA and CARB approved sound and emission levels. The catalyst-equipped exhaust system utilizes an electronic servo-controlled butterfly valve to alter the gas path between the left and right muffler. The integrated on-board computer measures operating conditions, and limits the exhaust flow to the left muffler to optimize performance, sound and emissions. The results are enhanced torque and horsepower throughout the operating range, and the rich, pleasing exhaust note you expect from a Harley-Davidson. The complete system includes left and right catalyst-equipped mufflers, servo motor, cable-operated butterfly valve, plug-in on-board computer with service diagnostic capabilities, left-hand heat shield, and all necessary installation hardware. Mufflers are 49-state street-legal when installed on fuel-injected motorcycles. ECM calibration is required, and dealer installation is recommended. FINISHING TOUCHES

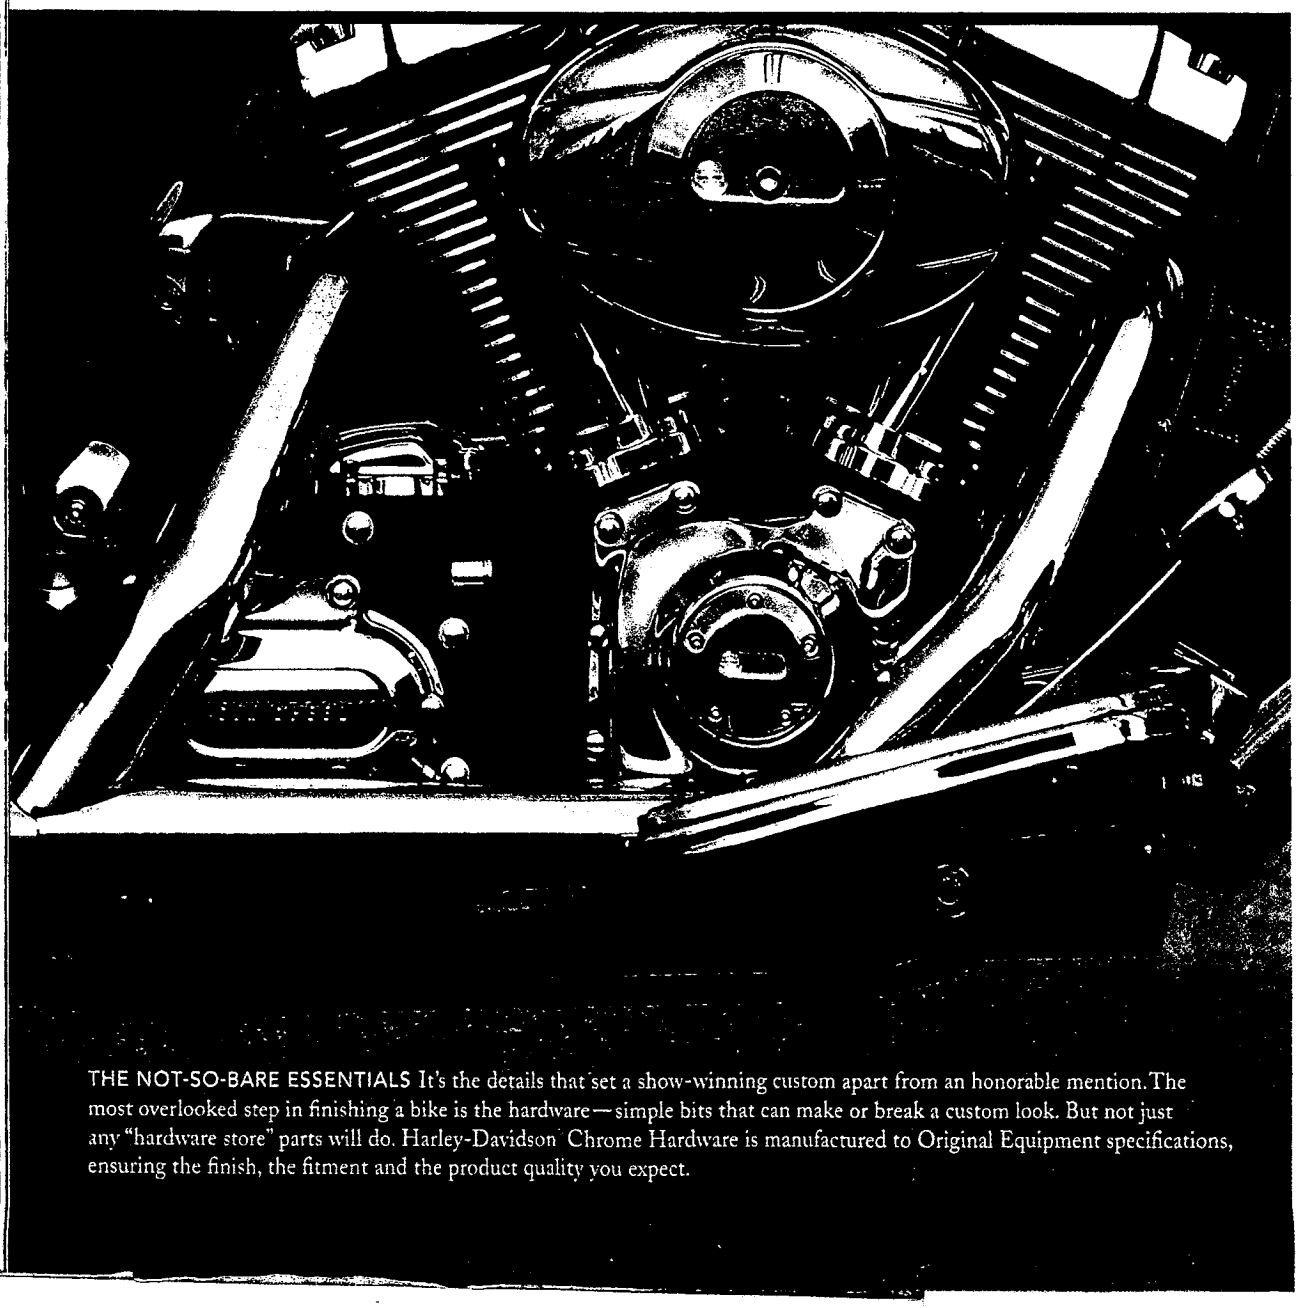
You've begun the process. You've picked the seat, windshield and touring accessories to create a bike that fits both you and the way you ride. But now it's time to build a bike that matches your sense of style as well. Developing a "look" for your bike doesn't have to be difficult; before you start, just decide on a theme and stick with it. After adding a few well-chosen covers, a console insert and complementing hand grips, you'll have a strong style that tells other motorists exactly what you're about.



THE NOT-SO-BARE ESSENTIALS It's the details that set a show-winning custom apart from an honorable mention. The most overlooked step in finishing a bike is the hardware—simple bits that can make or break a custom look. But not just any "hardware store" parts will do. Harley-Davidson® Chrome Hardware is manufactured to Original Equipment specifications, ensuring the finish, the fitment and the product quality you expect.

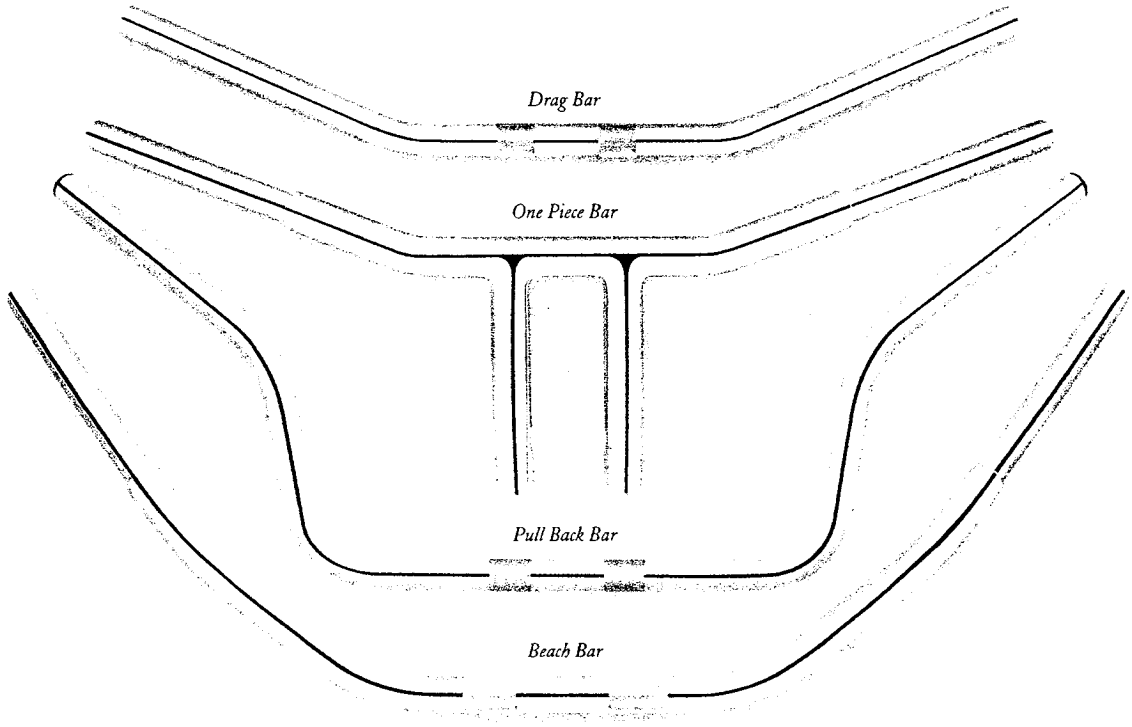
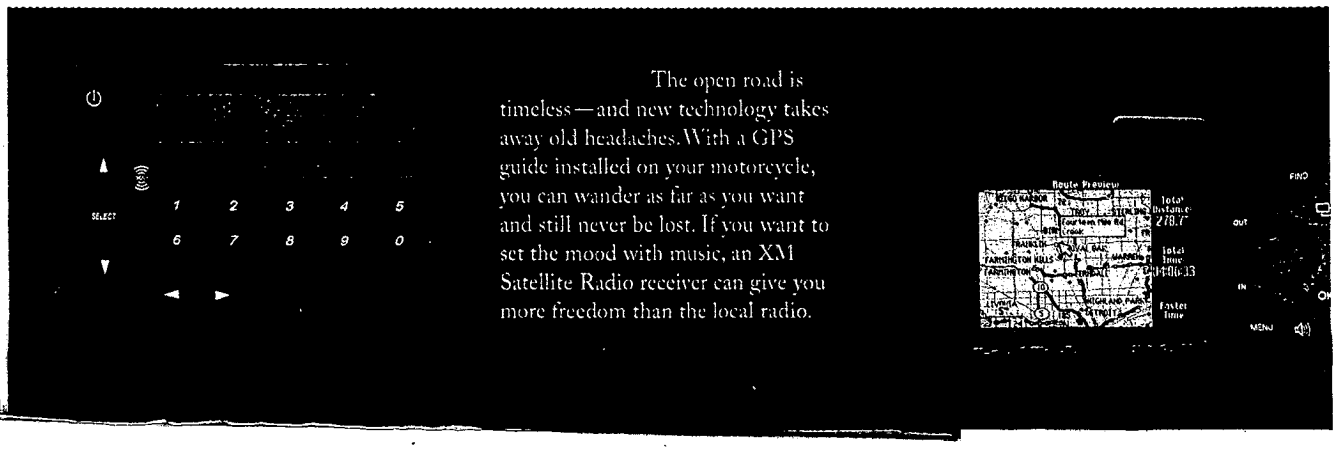
ALL UNDER CONTROL

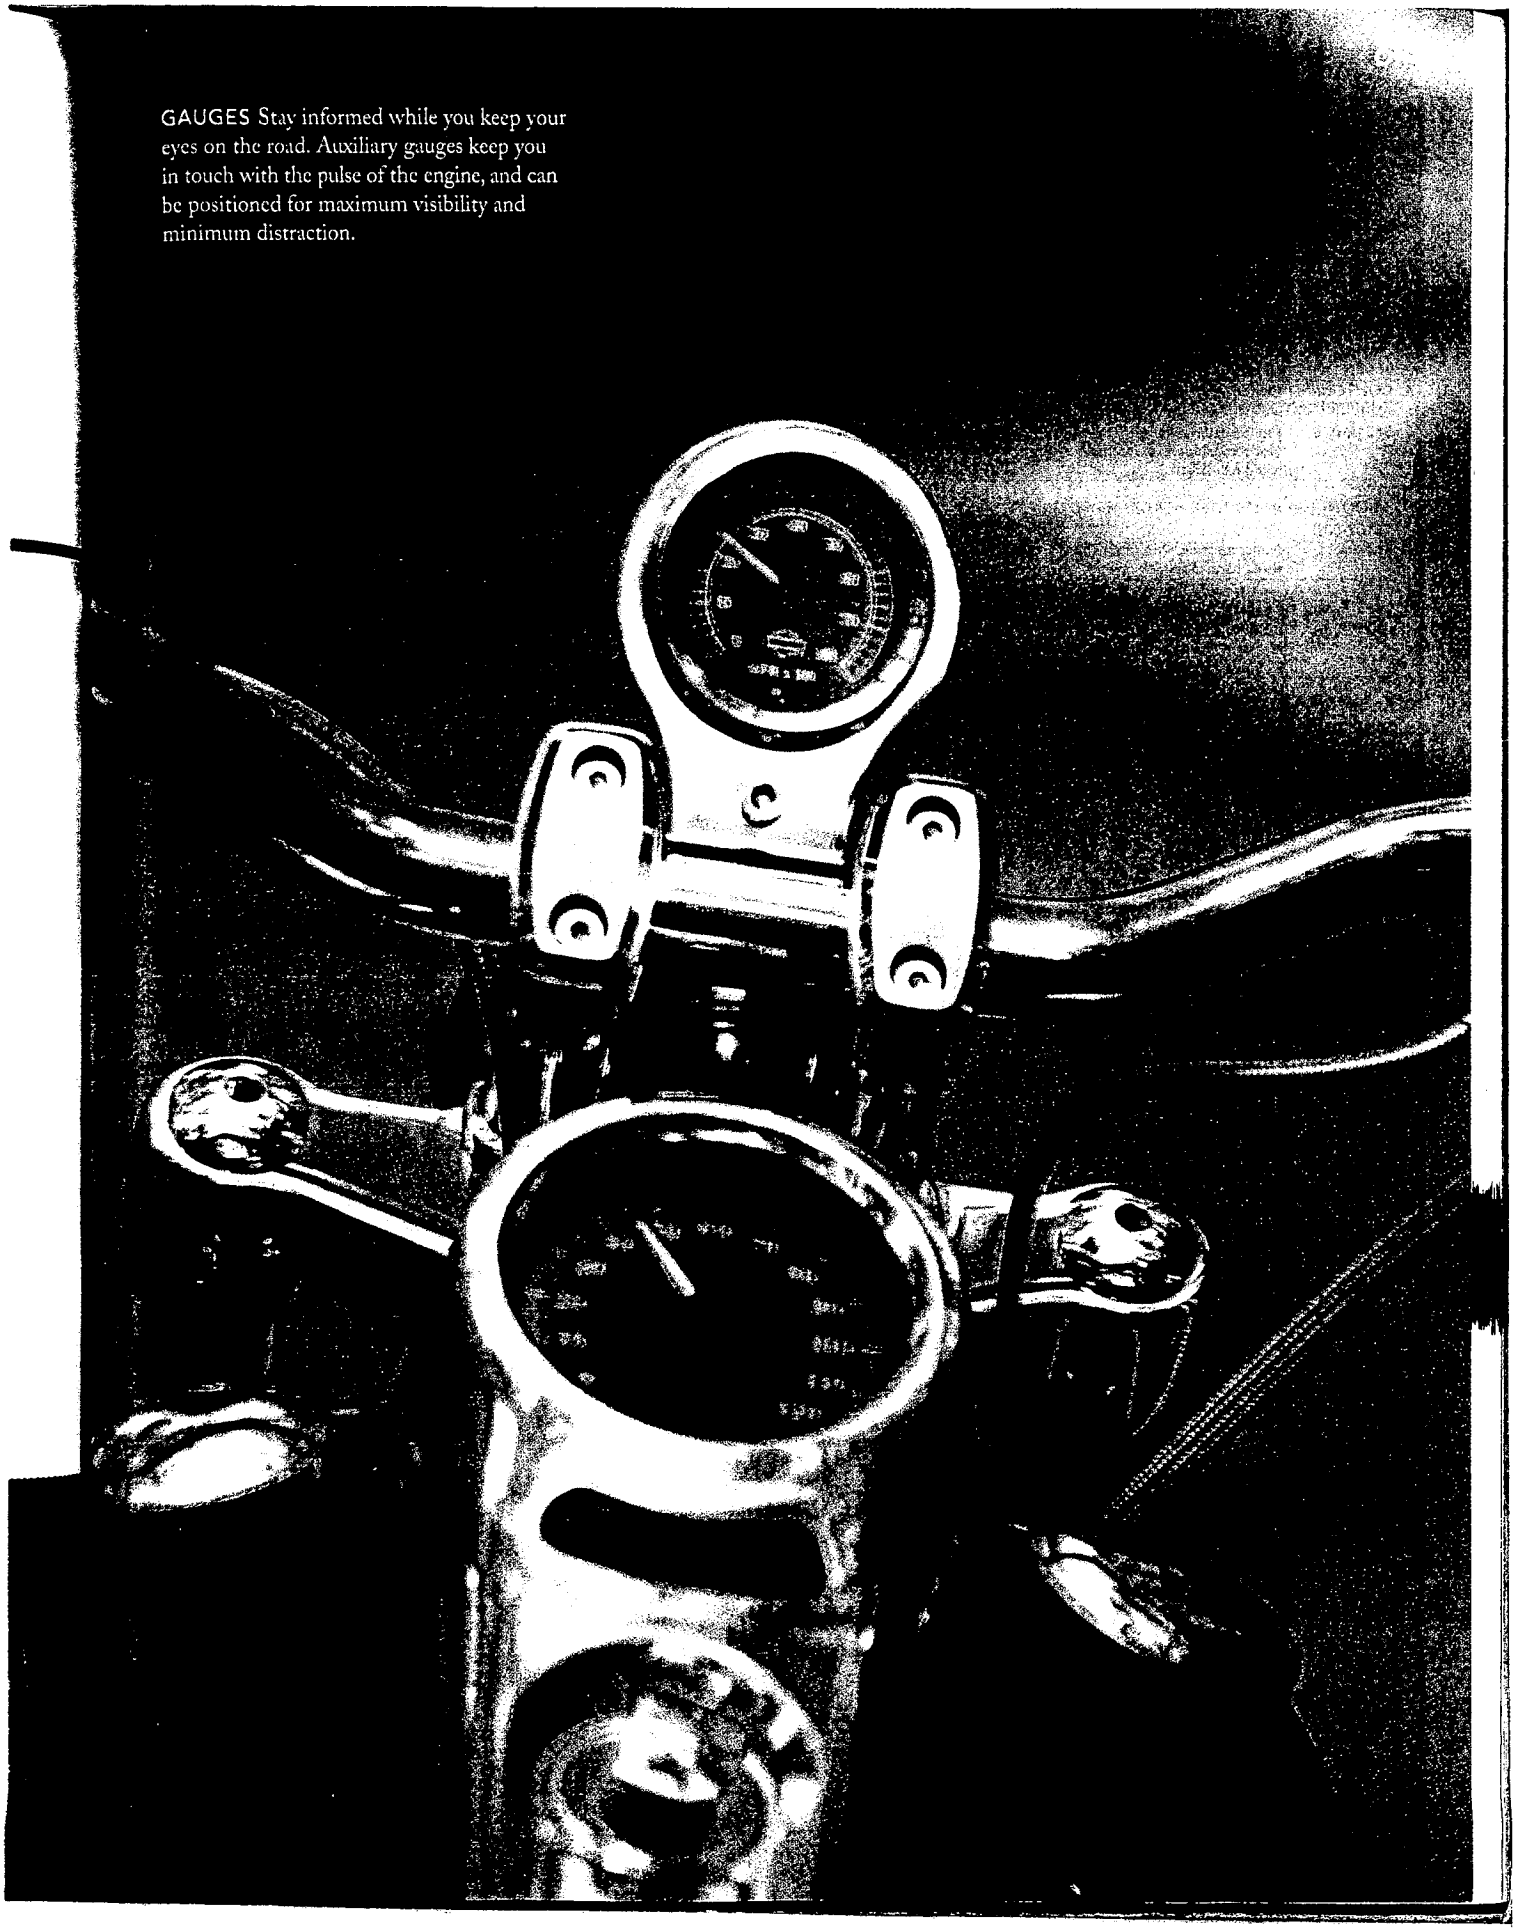
Handlebars, gauges and electronics are the link between your brain and your bike. Bars affect how you guide the motorcycle, gauges keep you in touch with the engine and electronics help monitor the world around you. At the same time, they can all have a great visual impact if you work to incorporate them into your bike's overall design.



HANDLEBARS AND HAND CONTROLS
Besides making a big impact on overall riding position, handlebars carry hand grips, mirrors, control cables and most electronics.



The open road is timeless—and new technology takes away old headaches. With a GPS guide installed on your motorcycle, you can wander as far as you want and still never be lost. If you want to set the mood with music, an XM Satellite Radio receiver can give you more freedom than the local radio.



GAUGES Stay informed while you keep your eyes on the road. Auxiliary gauges keep you in touch with the pulse of the engine, and can be positioned for maximum visibility and minimum distraction.

MULTI-FIT

HEATED HAND GRIPS

Keep comfortable on those cool morning or frigid night rides. Warm hands have a major impact on overall body comfort, and sometimes gloves just aren't enough. These thermostatically controlled grips have variable heat settings and automatic temperature monitoring to adjust to changing ambient temperatures. The grips remain at a constant temperature regardless of changes in outside temperatures. The self-contained control circuit and control knob means you have no additional switches or controller boxes to mount, and the grips are switched on/off with the ignition to avoid draining your battery. The "glueless" grip design allows grip removal if you change handlebars or motorcycles. Patent pending.

ATE STYLE

HANDLEBAR BASICS*

Bars communicate style and also affect how you handle your bike. You want to select a handlebar that puts your arms in a position that matches both the attitude you want to convey and the kind of riding you expect to do. While every handlebar has its own distinct measurements and characteristics, there are four basic styles to consider in your quest for custom-styled comfort:

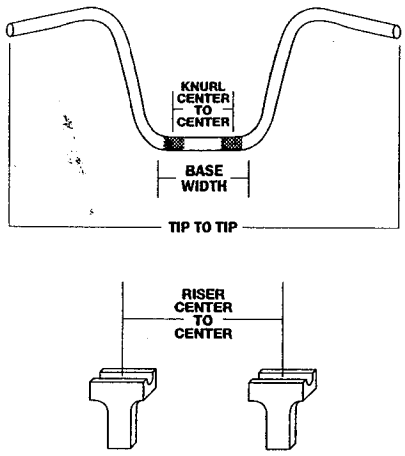
Ape Hangers
Pure custom attitude, best suited for boulevards and long straightaways.

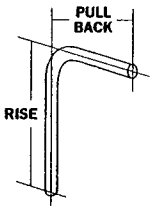
Drag Bar
A flat, no-nonsense handlebar for an aggressive riding style.

Sport Bar
Lower and wider bar for a slightly upright, forward leaning position.

Pull Back
Brings handgrips closer to the body for a more upright riding posture.

HANDLEBAR MEASUREMENTS





Rise is the vertical distance between a handlebar's tip and its base. Adding risers to bars that sit low can help put hand grips in a higher spot.

Pull Back brings hand controls closer while also lowering grip height. More pullback facilitates an upright posture, and suits riders with a shorter reach.

Width is measured from the tip of one hand grip to the other. Touring calls for a wider bar, while sport riding is best with a narrower tip-to-tip width.

Knurl Center to Center is the distance between the center of one knurl to the center of the other knurl. To ensure correct fit between the handlebar and risers, measure the center to center distance between the riser clamping surfaces and select a handlebar with the same dimension.

A. ROAD TECH™ RISER MOUNT RADIO

Add a quality sound system to your Road King®, FL Softail® or Dyna™ motorcycle. The Road Tech Riser Mount Radio features cast aluminum and high impact plastic construction, beefed up circuitry, rugged mounting brackets and waterproof speakers surrounded by a "Bar & Shield" logo leather cover. GET THEIR ATTENTION

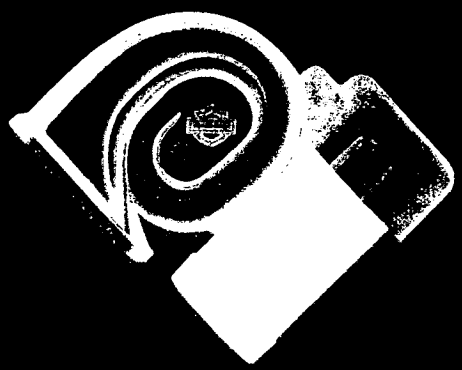
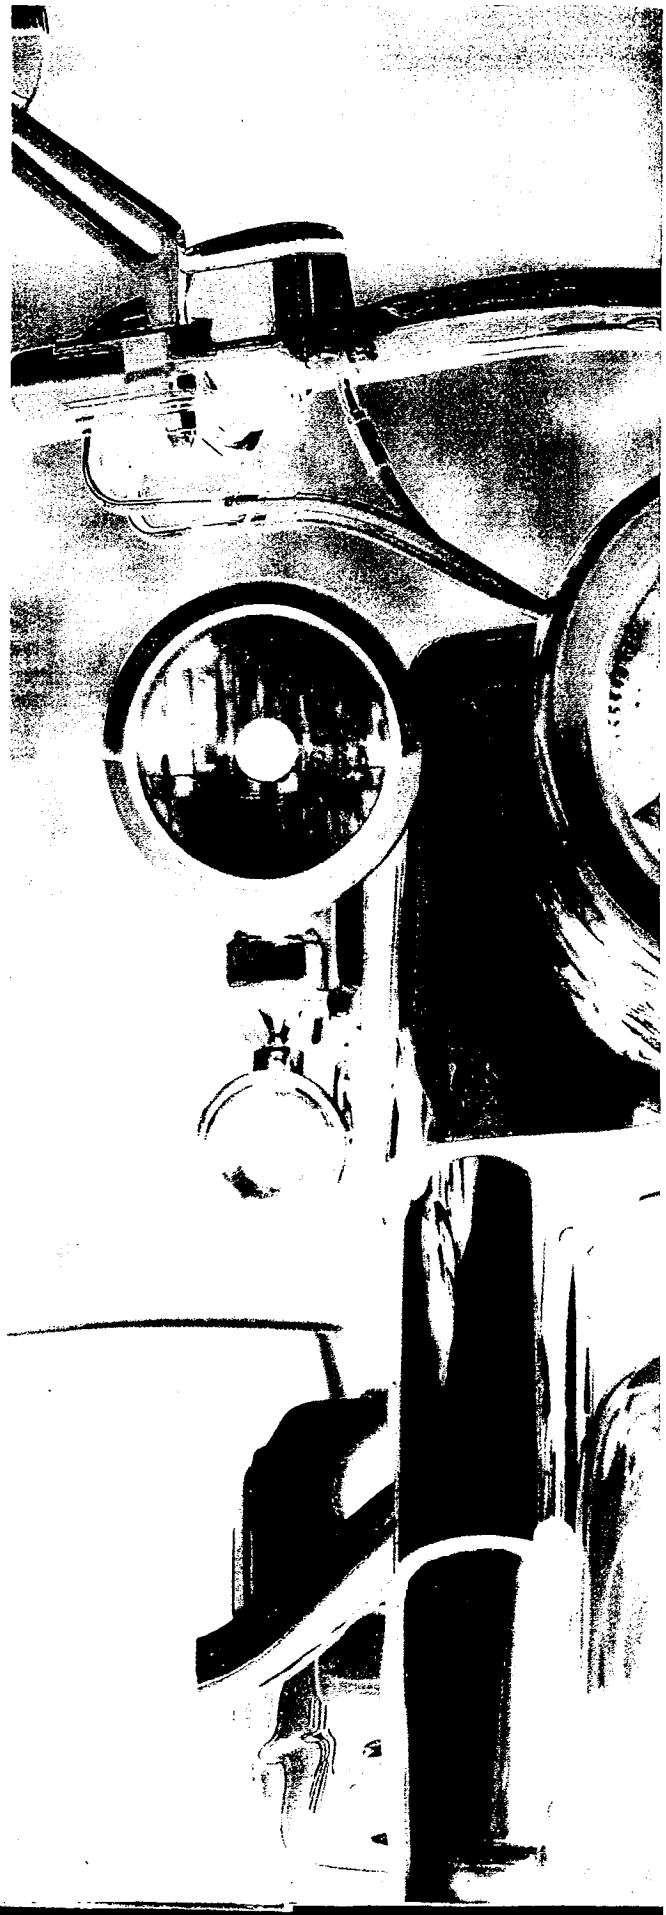
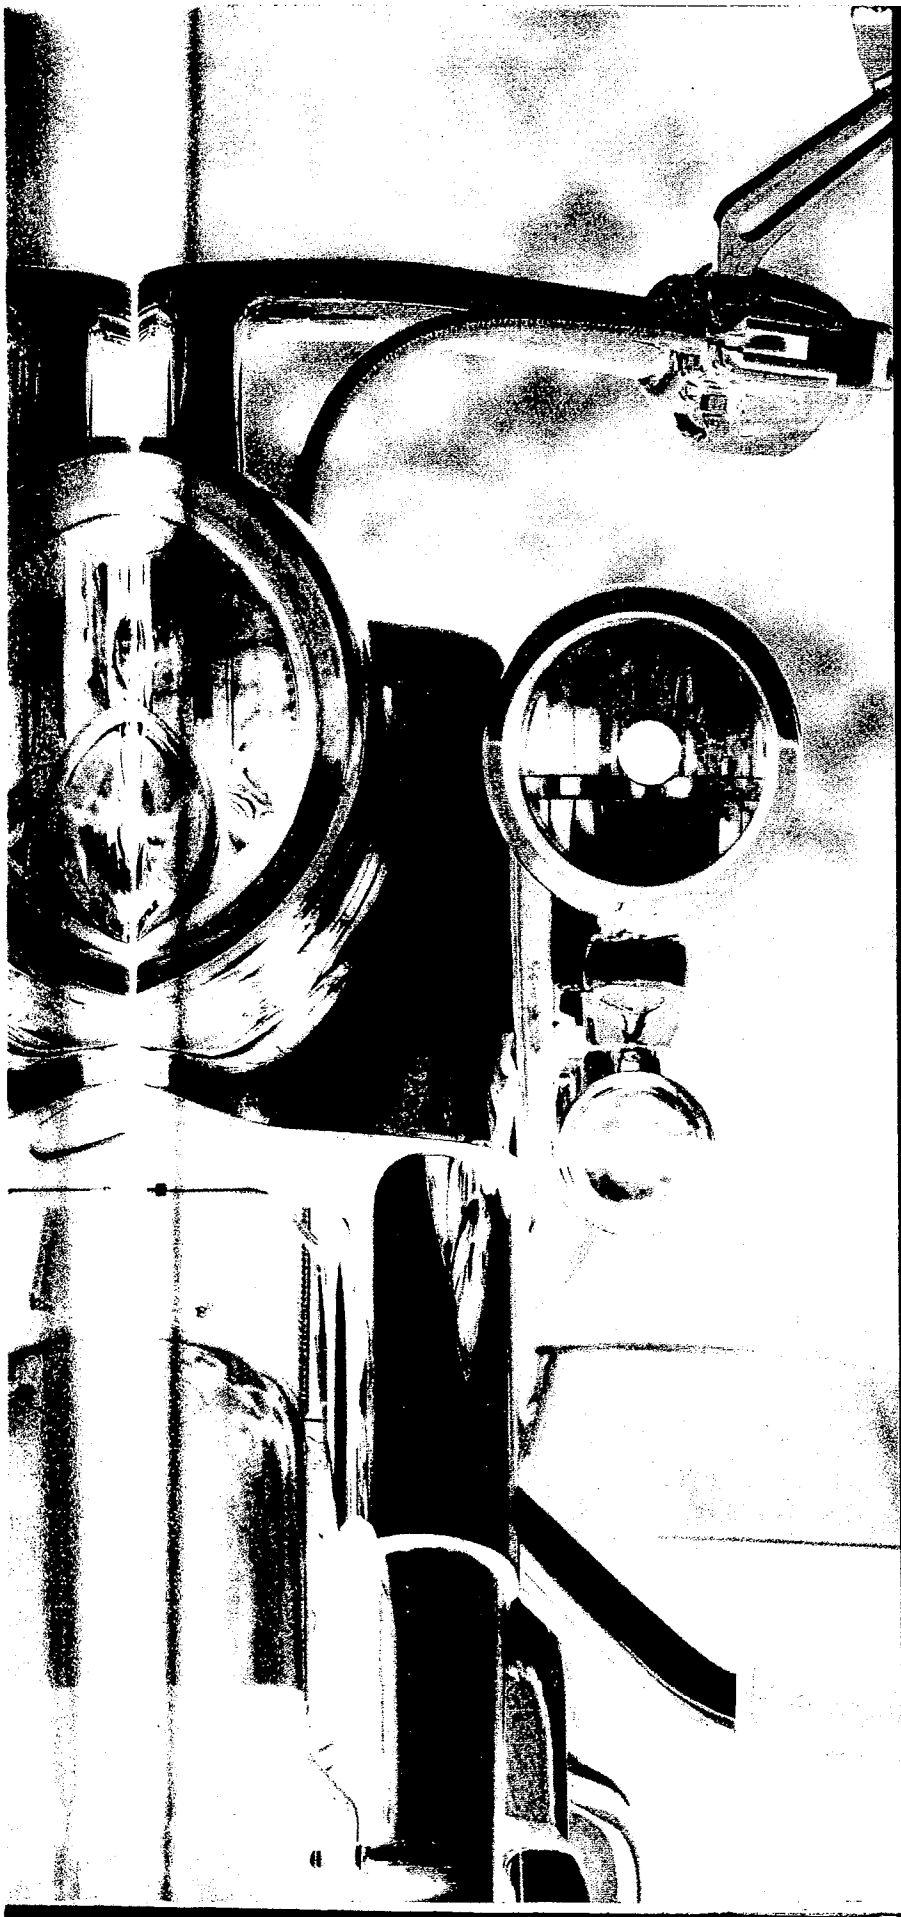
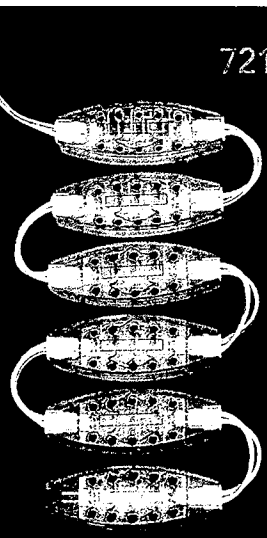
On a purely functional level, motorcycle lighting serves two main purposes: to help you see and to help others see you. In reality, lighting also serves as a design element on your motorcycle. The signature look of a Road King® model is defined by the massive 7" headlamp. The slim profile of a Sportster® motorcycle is mirrored in the compact headlamp and eyebrow. Harley-Davidson® offers a wide variety of Auxiliary Lighting Kits, Headlamp Trim Kits and Turn Signal Kits that provide a great look.



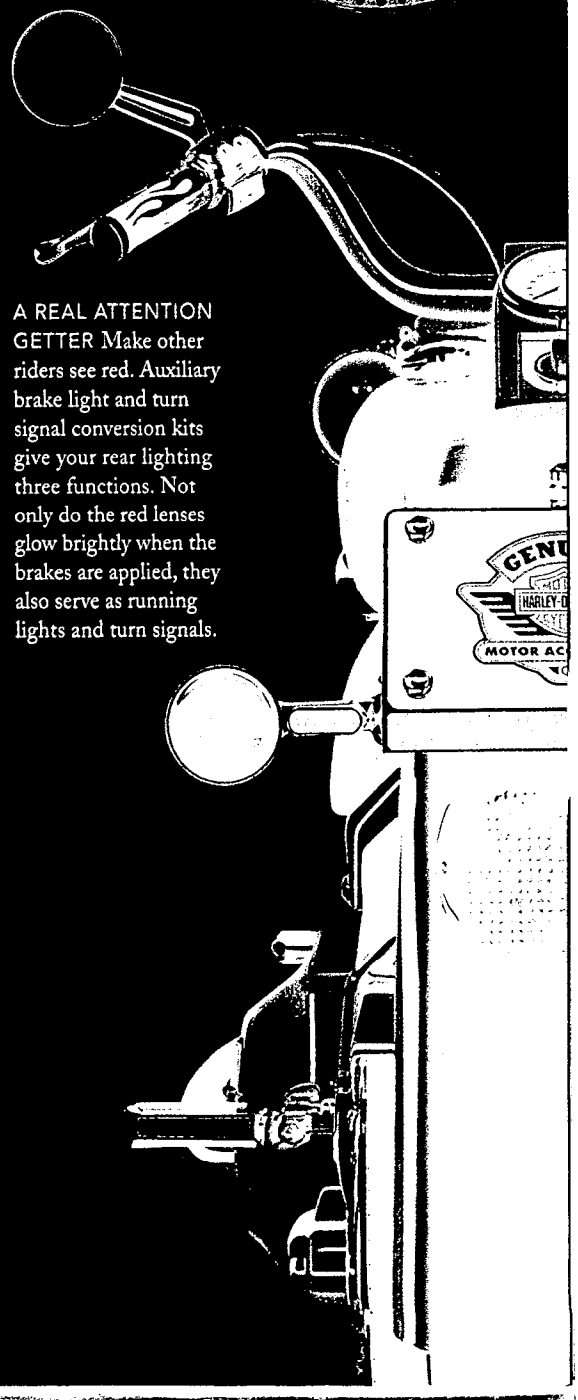
SIT UP AND GET NOTICED The Premium Air Horn is one of the loudest motorcycle horns available. The compressor attaches directly to the horn assembly, eliminating the need for separate mounting of the compressor and air hoses.







AN ENGINE LIGHT YOU'LL BE GLAD TO SEE Chrome isn't the only thing that grabs attention. Electra Glo™ LED Light Pods add a neon-like glow to your parked bike, and can be left on for hours while sitting at the curb on Main Street.



A REAL ATTENTION GETTER Make other riders see red. Auxiliary brake light and turn signal conversion kits give your rear lighting three functions. Not only do the red lenses glow brightly when the brakes are applied, they also serve as running lights and turn signals.

MULTI-FIT

LET THERE BE LIGHT

Featuring the latest in reflector optic design, Harley-Davidson® Original Equipment headlamps and accessory Dual Bulb Halogen Headlamps offer low-beam performance that is superior to traditional sealed beam bulbs. The wide curb-to-curb low beam pattern provides a great around-town view. Cruising down the back roads, Dual Bulb High Intensity Discharge (HID) or Dual Bulb Halogen headlamps add extra punch down the center of the lane, all while maintaining their excellent low-beam performance.

A. HIGH INTENSITY DISCHARGE (HID) DUAL BULB HEADLAMP KIT*

Cut through the darkness. The Harley-Davidson High Intensity Discharge Headlamp Kit features a true HID (Xenon) low beam bulb that projects a curb-to-curb spread of "blue/white" light. Compared to the yellow light of a traditional Halogen bulb, the HID lamp produces a "Daylight Color Impression" that appears more natural to the user.

The HID Dual Bulb Headlamp assembly features unique advanced optics with separate low and high beam reflectors dedicated to focus the light for optimal illumination. The HID low beam is always illuminated, providing a wide pool of light, and the separate Halogen high beam bulb adds a focused shaft of light down the center of the lane.

The HID Dual Bulb Headlamp is not just a high-performance bulb, it's a complete lighting system. The system includes the HID bulb, an electronic starter, and a ballast system. The bulb is a complex tube that replaces the filament with arc-producing electrodes. The starter allows quick ignition of the arc, and the ballast converts incoming power to the high voltage needed to maintain the glow. The Xenon-filled HID bulb is resistant to vibration, and has a life expectancy of up to 10 times that of a Halogen bulb. The headlamp kit is DOT approved for use in all 50 states.

The complete Headlamp Kit includes the shock and vibration resistant housing HID low beam bulb, halogen high beam bulb, starter, waterproof ballast, and all necessary wiring.

The euro-inspired projector beam styling combines a state-of-the-art look with a CAD designed faceted reflector bowl that is optimized for crisp patterns and light cut-off. The single upper bulb functions in low beam, and both upper and lower bulbs operate in high beam. The low beam setting produces a wide curb-to-curb light pattern, and the high beam adds focused light down the center of the lane without compromising width. A MAJOR TURNING POINT

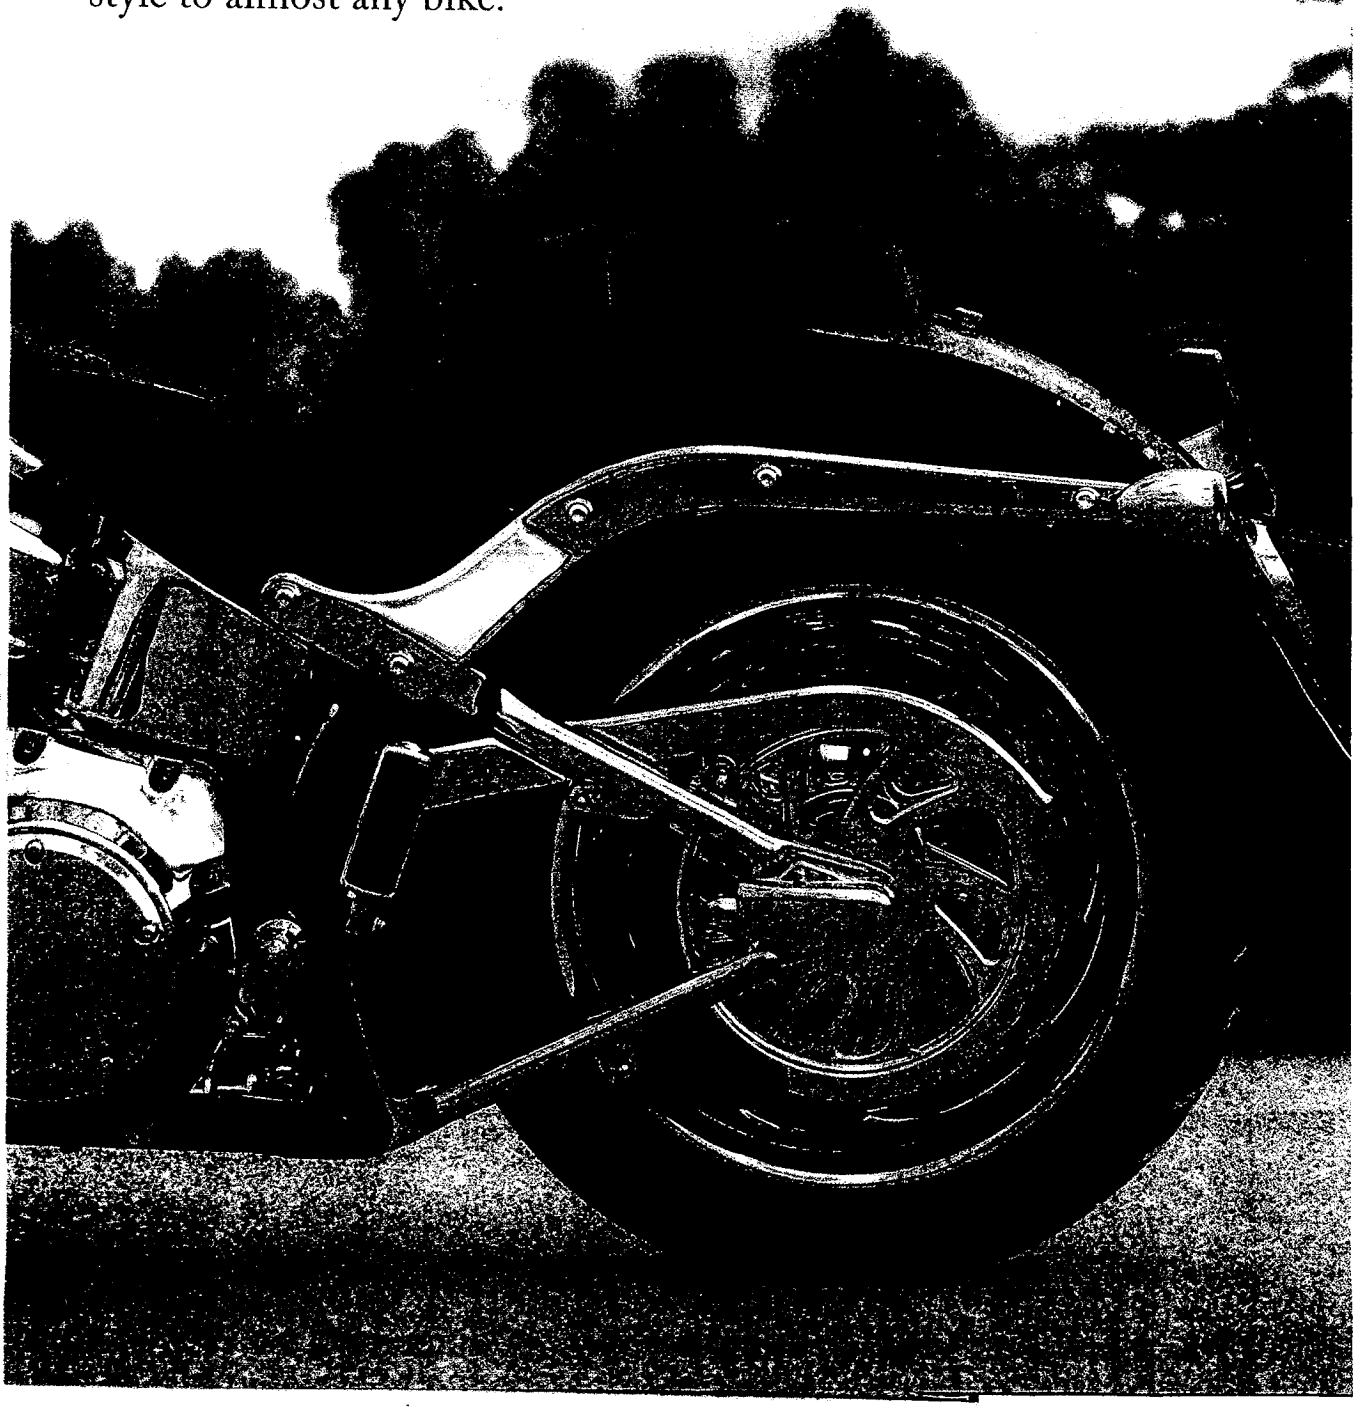
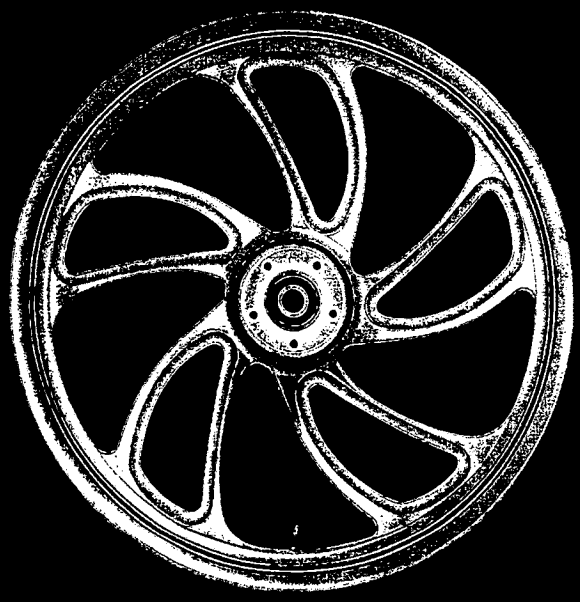
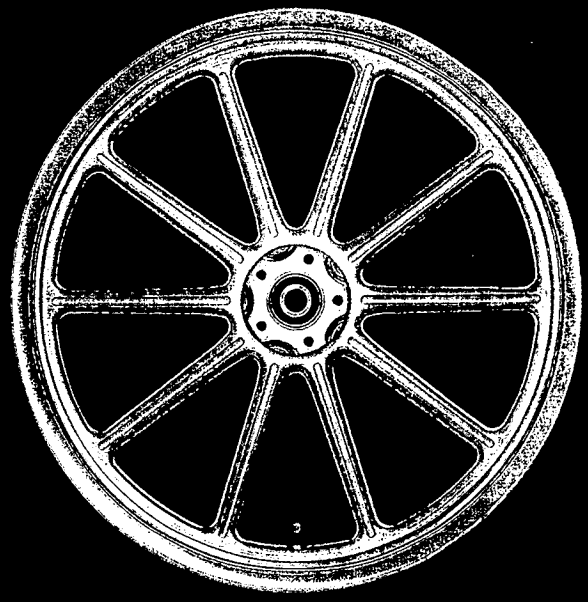
From a visual perspective, wheels and tires make up almost half of your bike's profile. So, the overall look will rest heavily on how well your wheel choice matches the desired design direction. For example, traditional laced wheels add an open and airy look to a nostalgic bike. Mirror chrome disc wheels add visual weight to a low, slammed custom. And multi-spoke forged wheels lend a strong, contemporary style to almost any bike.





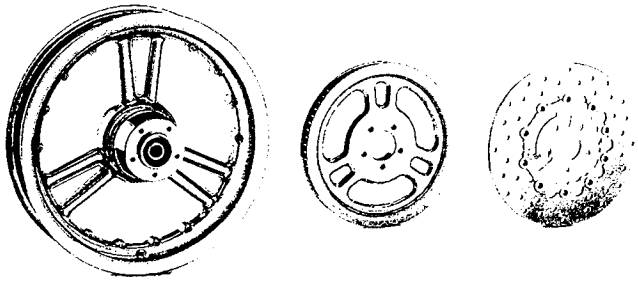
A cut above the rest. Curved ten-spoke detail is pulled into a traditional five-spoke design, balancing complexity with simplicity.

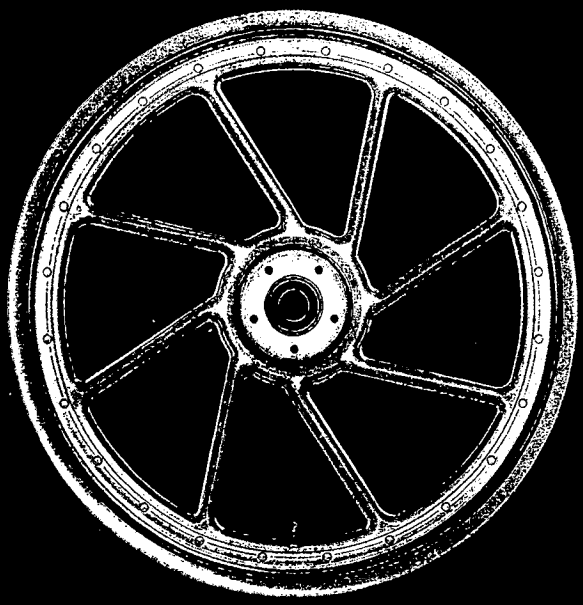


This drop-dead gorgeous wheel gives your bike a straight-up serious look. With ten sleek chrome spokes, you might just start feeling lucky.

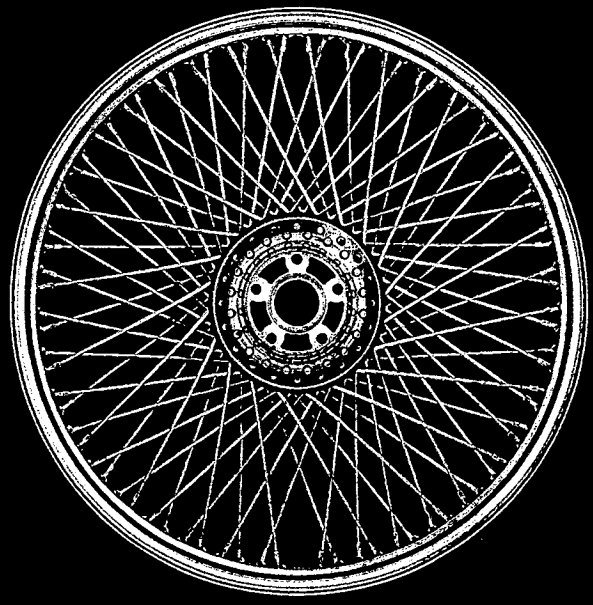
FIND THE RIGHT COMBINATION To pull the bike together visually, select complementing wheels, brake rotors and drive sprocket. To finish the custom look, add chrome wheel spacers, axle covers, and custom rotor and sprocket hardware.

Detonator Collection *The weapon of choice for a hard-line cruiser theme.*





Slanted spokes give the effect of constant motion. The naturally aggressive look of this wheel works well with a stripped-down custom bike, but the open design also works to bring a nostalgic bike into the 21st century.



Hypnotically beautiful, this exotic 80-spoke design takes the custom cruiser to a whole new level of consciousness.

A. SLOTTED SIX-SPOKE WHEEL

A dramatic look that breaks the mold in motorcycle wheel styling. Available in black or chrome, this stylish custom wheel incorporates the strength of twelve spokes into the illusion of a lightweight six-spoke design. Textured finger-like slots radiate from the center to the uniquely rounded smooth finishes on the inner and outer rim. The combination of polished and textured finishes on the spokes, rim and hub fool the eye and add to the sleek appearance, while the premium quality cast aluminum construction reduces weight without compromising strength. Equally spaced and raised nubs around the rim breathe custom, and the embossed "Bar & Shield" logo ensures that these wheels are a Harley-Davidson exclusive. A. CHROME NINE-SPOKE CAST WHEEL

Add a splash of chrome. Also available for Softail models, these fully polished nine-spoke wheels are styled to match the Original Equipment wheels on many Touring models. More than just a chrome-plated Original Equipment Touring Wheel, these wheels utilize tooling developed specifically for chrome-plating to give a near perfect finish without the "waves" created when polishing the Original Equipment cast wheel. The rib on the Original Equipment wheel spoke has been removed to provide a smooth uninterrupted spoke finish. Special masking was developed to prevent plating corrosion inside bolt holes and bearing sleeve areas. Certain wheel kits require separate purchase of model-specific Wheel Installation Kit (see page 748).

A. H-D® SMART SECURITY SYSTEM

The H-D Smart Security System offers automatic self-arming and hands-free disarming for vehicle electronic security functions. The Hands Free Fob communicates directly on its own unique and individualized frequency with the Hands Free Security Module and Antenna. Attach the Hands Free Fob to your vehicle ignition key ring. As you upright your vehicle or switch the ignition on, the Hands Free Fob will communicate the Security System "disarm" command allowing you to start your vehicle. After riding your vehicle, park and switch the ignition off with your key. Within 5 seconds the Security System will automatically self-arm, disabling your vehicle starter, ignition and electronic fuel injection (EFI). The rider may also disarm the system by keying a previously entered personal code on the turn signal switches. A flashing status indicator informs the rider that the Smart Security System is armed or disarmed. The Smart Security System allows configuration to include the Transport Mode or Extended Storage Mode. The Smart Security System includes: Hands Free Security Module (Integrated Security Sensor and Turn Signal Module), Hands Free Fob, Antenna Module, Antenna Harness and Antenna Mount (Dyna models).

C. HARLEY-DAVIDSON® FACTORY SECURITY SYSTEM

Equip your Harley-Davidson® VRSC™, Sportster®, Dyna™, Softail® or Touring model with the security system designed and approved by The Harley-Davidson Motor Company.

When armed, the Security System disables the starter and ignition while monitoring the electrical system and vehicle motion with adjustable sensitivity. Minor disturbances trigger a momentary warning; major ones an unbroken thirty-second alarm, after which the Security System returns to monitoring. A distinctive four-way flasher pattern is the alarm signal. An optional self-powered Smart Siren Kit adds a piercing scream that sounds even if the battery cable is cut.

The Security System is armed and disarmed with a remote control waterproof key fob utilizing state-of-the-art rolling code technology. If the key fob is not available, the rider may arm or disarm the system by keying a previously entered personal code on the turn signal switches. A flashing status indicator informs the rider that the Security System is armed or disarmed.

When armed in the Transport Mode, the Security System disables the starter and ignition, but monitors only the electrical system, not vehicle motion. The vehicle may be moved but electrical tampering triggers an alarm.

An Extended Storage Mode keeps the battery from discharging when the Security System is armed for extended periods of time.

The Security System is compatible with FL Touring models equipped with approved TLE/Ultra Sidecars when the system is configured as described in the SIDECAR OWNER'S MANUAL.

BODYGUARD IN A BOTTLE

Introducing a breakthrough in powertrain protection – Screamin' Eagle® SYN3® Synthetic Motorcycle Lubricant. For use in engines, transmissions and primary chaincases, it's just the latest in a line of products formulated specifically to keep your Harley® motorcycle running strong, mile after mile.

SCREAMIN' EAGLE® SYN3® SYNTHETIC MOTORCYCLE LUBRICANT, SAE 20W50

TESTED-CERTIFIED for use in Harley-Davidson® engine, primary chaincase and transmission applications, Screamin' Eagle SYN3® Synthetic Lubricant makes changing and topping-off fluids a simple one-product process. Developed with a proprietary three synthetic basestock formula, Screamin' Eagle SYN3 Lubricant is formulated to provide for long-term protection and engine cleanliness requirements, and to provide superior high-temperature protection for high-output engines. SYN3 Lubricant is formulated to maintain the coefficient of friction for proper clutch operation and to provide the proper lubrication to the primary chain drive. In addition, SYN3 Lubricant is designed to provide the correct lubricity for the anti-wear requirements of transmission gears and for improved seal protection. This formula is approved by Harley-Davidson for use in all stages of engine life and is not detrimental to the break-in stage of engines.

99824-03/00QT	Formulated for use in Harley-Davidson Engines, Transmissions and the following Primary Chaincase applications: '71-later XL, '83-'84 XR1000, and '84-later Big Twin models with wet-type diaphragm spring clutch.	**$9.95**

What are the key benefits to using SYN3® Motorcycle Lubricant?

- SYN3 Lubricant can be used in the engine, primary chaincase, and transmission.
- SYN3 Lubricant offers improved film strength for superior wear protection at high temperatures, and improved deposit control for a cleaner engine, transmission, and primary chaincase.
- SYN3 Lubricant is formulated for reduced oil consumption, improved wear protection, high-temperature detergency, and superior overall field performance.

What's the difference between synthetic and petroleum-based lubricants?

Both synthetic and petroleum-based lubricants are derived from the same crude oils. But that's pretty much where the similarities end. Unlike their petroleum-based counterparts, which inherit physical components (including contaminants) of the source crude oil in the refining process, synthetic lubricants are manufactured from basestocks that are custom-designed from scratch to have desired properties for specific purposes, meaning that engineers have complete control of the lubricant from start to finish – at the molecular level.

What does SYN3® Synthetic Motorcycle Lubricant do for my drivetrain?

SYN3® Synthetic Motorcycle Lubricant offers all the benefits of Genuine Harley-Davidson® 360 Motorcycle Oil, and:

- Offers superior wear protection at higher temperatures
- Keeps engines, transmissions and primary chaincases cleaner
- Meets the anti-wear lubricity requirements of all transmission gears
- Lubricates all primary chaincase components
- Delivers smooth, sure clutch operation
- Provides long-term protection of all internal components
- Improves seal and gasket performance
- Offers superior performance in high-output engines

What testing was performed on SYN3 synthetic motorcycle lubricant?

During its development, SYN3® Synthetic Motorcycle Lubricant was subjected to more than three years of laboratory bench testing, dynamometer testing under accelerated conditions, open road vehicle durability testing, closed course durability testing, and wear and deposit rating analysis.

When can I start using SYN3 Synthetic Motorcycle Lubricant?

Right away. SYN3® Synthetic Motorcycle Lubricant is approved for all stages of engine life, including the first service interval – which means it's not detrimental to engine break-in. You can even use it as a first fill upon delivery of a new motorcycle.

Since SYN3 Synthetic Motorcycle Lubricant is a high-performance lubricant, can I wait longer between changes?

No. As with petroleum-based engine lubricants, you should drain and replace the synthetic motorcycle lubricant in your engine at every 5,000-mile service interval. You should also change your oil filter anytime the engine lubricant is changed. If you ride your motorcycle hard, under dusty conditions, or in cold weather, you should change your SYN3® Synthetic Motorcycle Lubricant and oil filter more often. You should always change your engine lubricant and filter prior to any extended storage so that your engine is clean and free of any contaminants during this time.

What Does H-D® 360 Mean?

The name Harley-Davidson 360 has its roots in the testing criteria applied to certify this oil. More than just a dynamometer test, it is a designation of an entirely new performance rating system. To earn the name H-D 360, this oil had to outperform all others on a full round of tests. Laboratory bench testing measured viscosity retention and oxidation stability. Next, the oil was run on the open road under high ambient temperatures and high load conditions. After each test, the engineers performed a complete engine tear-down and analysis. Plenty of oils vied to carry the name Harley-Davidson, but only one oil met the challenge: H-D 360.

What viscosity grade should I use in my Harley® Motorcycle?

The recommended viscosity grade for all temperature conditions is SAE 20W50 Harley-Davidson Motor Oil. SAE 10W40 H-D Motorcycle Oil is also available and appropriate for low temperature climates. The SAE 50 H-D Motorcycle Oil is satisfactory in ambient temperatures of 60-80°F, and the SAE 60 H-D Motorcycle Oil in ambient temperatures above 80°F. SAE 20W50 covers the broadest range of operating temperatures.

What does Harley-Davidson Motorcycle Oil do for my engine?

- Protects the engine from rust and corrosion
- Keeps the engine clean
- Cools engine parts
- "Seals in" combustion pressure
- Prevents foaming
- Permits easy starting at a wide range of temperatures
- Provides quick oil circulation
- Reduces friction and power loss

How often should I change my motorcycle engine oil?

You should change your motorcycle engine oil and engine oil filter at the first 1,000-mile service interval and at every 5,000-mile service interval thereafter. If you ride your motorcycle hard, under dusty conditions, or in cold weather, the engine oil and filter should be changed more often. You should always change your engine oil and filter prior to winter storage (or any extended storage) so that your engine oil is clean and free of contaminants for this time period.

Can I go longer between oil changes by changing the filter?

NO! The job of the oil filter is to remove dust, soot and other solid matter. Filters cannot remove water, gasoline or acids and it cannot do the job of oil additives that have been used up. You should change your oil filter at the first 1,000-mile service interval and at every 5,000-mile service interval thereafter or prior to winter or extended storage periods.

OIL FILTERS

The function of an oil filter is to remove dust, soot and other solid matter which contribute to engine wear. Filters cannot remove water, gasoline or acids and it cannot do the job of oil additives that have been used up. You should change your oil filter at the first 1,000-mile service interval and at every 5,000-mile service interval thereafter or prior to winter or extended storage periods.

A. DEFINITIVE5™ FILTRATION SYSTEM

Stylized motor oil filtration system featuring integral pressure relief and anti-drain back valves and a replaceable filter element. The removable end cover allows for easy drain, preventing used fluid from draining onto the crankcase. Cover, housing and threaded adapter are CNC machined from aluminum and steel. The technologically advanced synthetic filter media provides nominal 5 micron (1 micron = .001mm) filtration which retains dust, soot and other solid matter with low internal pressure loss. The disposable filter element is more environmentally friendly as it does not contain the metal structure of a spin-on filter. Includes cover wrench.

DUNLOP® TIRES

Since 1984, DUNLOP Tires have been Original Equipment on all Harley-Davidson® Motorcycles. DUNLOP is recognized as the world-leader in motorcycle tire design, engineering and manufacturing excellence. Harley-Davidson Parts and Accessories Division, a facility of Harley-Davidson Motor Company, recently achieved certification to its ISO 9001 International Quality Standard registration.

The sale or use of these parts or accessories does not grant the purchaser a license or other right under any Harley-Davidson patent.

CAUTION: It is possible to overload your motorcycle's charging system by adding too many electrical accessories. If your combined electrical accessories consume more electrical current than your vehicle's charging system can produce, the electrical consumption can discharge the battery and cause vehicle electrical system damage. Ask your dealer for advice about the amount of current consumed by additional electrical accessories.
