Product Description

1/12/2015

Niteye® EYE30 Flashlight - Extreme Lights

The EYE30 was Niteye's first flashlight. World-wide it is the best seller. Very few flashlights on the market can produce 2000 lumens, not to mention 2000 lumens from such a small unit. The EYE30 has unique features which makes it stand out from its competitors, such as: Three separate reflectors, battery level indicator, removable grip handle, many different battery configurations and direct charge from a 12V car adapter.

The EYE30 comes with: 4 x 2600 mAh Li-ion batteries, built in charger, 12V car adapter and 100 – 240 V home charger.

Light source: **3 x Cree XM-L U2 LEDs**

Material and finish: **Aircraft grade aluminium and HA III anodizing**

Rated max lumen: **2000**

Beam distance: **380m**

1/12/2015

Niteye® EYE30 Flashlight - Extreme Lights

Modes and runtimes: **2000lm – 2h / 1000lm – 3h / 300lm – 12h / 60lm – 55h**

Battery: **4 x 18650 2600 mAh Li-ion (included) or 8 x CR123 cells**

Water resistance: **IPX 8 at 2m**

Features:

- **Magnetic control ring**
- **Constant current regulation**
- **Stainless steel bezels**
- **Battery level indicator**
- **3mm AR coated lenses**
- **12V Direct charge**
- **Removable grip handle**

Dimensions: **Length: 145mm / width: 66mm / depth: 66mm**

Weight: **396g** (excluding batteries)

1 review for Niteye® EYE30 Flashlight

elandre – October 18, 2013:

I have the Desert edition of the EYE30. It is basic exactly the same, just powder coated in a sand colour. The quality of this light is extraordinary. The handle really improves its usability. The stainless steel bezel rings are placed at all the vulnerable places and

<http://www.extremelights.co.za/shop/niteye-eye30-flashlight/>

8/17

1/12/2015

Niteye® EYE30 Flashlight - Extreme Lights

does not only protect but also looks great. Every last detail is sought after, even the metal battery cage. The EYE30 weighs quite a bit, but considering 2000 lumens out of three LED's, there's going to be a lot of heat and to compensate for that they upped the aluminium thickness in the head. Using the magnetic control ring is intuitive and one hand operation is easy. There are eight modes to choose from and I have found that even the lowest mode of 60 lumens, has ample of light. We went camping next to the Orange River and had to set up camp in pitch darkness. I made the flashlight stand whilst aimed at the setup site and the light was sufficient. And knowing that we had 55 hours of low mode was very reassuring, and knowing that there is 1940 lumen still on tap, that's nice. The beam pattern is beautiful. I had no need for a zoom function between focus and flood because the beam pattern combines both, flooding with light the area in front of you while still reaching 380 m afar. You won't be caught off guard with flat batteries if you keep an eye on the battery level indicator. I had to replace my first o-ring, but fortunately a spare one was provided. Using the EYE30 is a blast and I can recommend it to anyone.

Niteye has been making flashlights for other companies for a while and has decided to make a line of their own as well. Their first light is a 2000 lumen beast that is completely controlled by a rotary ring and is rechargeable using a port on the side of the light. The light hits 2000 lumens using 4 18650 batteries to

Few questions for you. You mention the home connection kit. Do you have a link or GG SKU so I c; on your site doing a casual search. What is the warranty on the EYE30? This looks like a great light about putting my RRT3 on Ebay so I can get this bad boy. I appreciate the review!

fandy funz 1 year ago in reply to Going Gear

okay... thank you... i have it now from a local store.. and quite happy with it... :)

Niteye EYE30 2000 Lumen LED Flashlight Review - YouTube

Leo 2 years ago

Can this be comfortably used on a belt like the tm11? Been saving up for the tm11, but I like the rin. This shouldn't have problems with running over extended minutes on turbo right?

TheGod0fsniperz 1 year ago

The Carry Handle, can it be used with other brand? TM26?

Dino Davila 2 years ago

Thank you very much.

DiegoTuRBO 2 years ago

Very nice video sir. Two questions, is that flashlight worth the price? And, as you showed, it has a good throw, but is the flood reliable too? Thank you.

MannyScoot 2 years ago

Nice review Keep hitting that dead tree with this much light and it will come back to life !!... ;)

Going Gear 2 years ago [in reply to deepockets15](#)

Nope, China.

Going Gear 2 years ago [in reply to Leo](#)

It will drop the output, just like any other lights in this class.

deepockets15 2 years ago

are these made in the us?

Going Gear 2 years ago [in reply to martinaee](#)

I haven't had much time with the EYE30, but I do like the TM11 more so far. I prefer floody beams over throw since I don't have a lot of big open areas around here.

Dino Davila 2 years ago [in reply to ShadowwwLFS](#)

Didn't mean to ruffles your feather man but I do like the Nite Core TM11 better. Sorry. The TM 11 is on sale now and its a more versatile light as well. Nothing personal mang.

Shenzhen Jetbeam Electronic Technology CO., Ltd was created in 2004, which is specialized in LED lighting tools with two own brands – JETBeam and NITEYE, including R&D, manufacture, Sales & Marketing and brand operation.

Download

[New Product](#)

[Manual](#)

[Catalog](#)

[Picture](#)

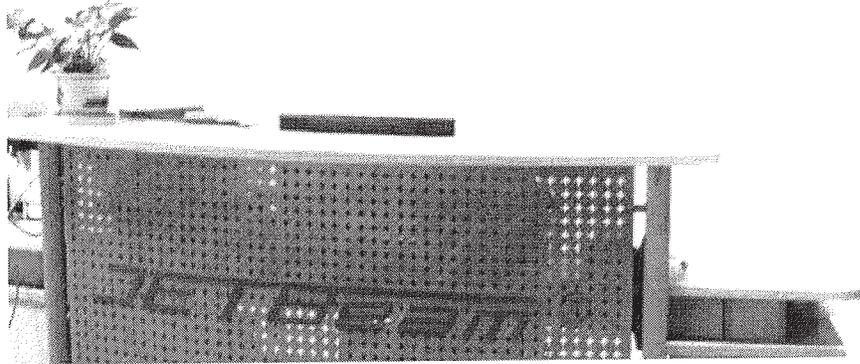

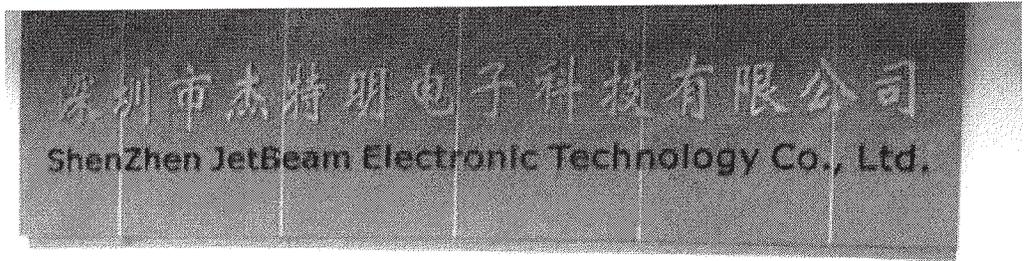

It has been 9 years since JETBeam was created in 2004. During these years, JETBeam has always focused on high-performance LED flashlight. Thanks to its excellent performance and outstanding workmanship, it has won good reputation and been widely used in multiple fields, including outdoor activities, military use, law enforcement, industrial lighting, aviation, marine and etc. In some main areas like USA, Canada, EU and Japan, JETBeam has been regarded as one of the leading mid-to-high end flashlight brands and flashlight technology development explorers.

To further promote product innovation, Shenzhen Jetbeam Electronic Technology CO., Ltd established the high-end outdoor lighting brand – NITEYE in 2011, which is mainly for bike lights, headlamps, searchlights and high-performance flashlights. With high technology, exquisite workmanship and near-perfect design, NITEYE has met consumers' high-end demand and become more and more popular. NITEYE will continue commit to high-quality lighting products for outdoor and professionals.

Anyway, there is a long way to go for both JETBeam and NITEYE. Shenzhen Jetbeam Electronic Technology CO., Ltd will adhere to the aim for perfect design & workmanship to provide customers better products and service with more excellent talents.

JETBeam JET-I MK-II

Exhibit M

Provided for review
by the kind folks at:

Emilion's Workbench

5 Stars
Excellent

Light Type: Luxeon III LED

Light Class: Outdoor / Rough Use / Etc.

The Mark II is the next version of, and replaces, the original JET-I. Since the Mark II has so much in common with the original version, I am not going to repeat the entire review here. Instead, I invite you to please read [the JET-I Review](#), and then apply the updates listed below. Consider this to be "chapter two" in the JetBeam JET-I story...

Quick Recap: The JETBeam JET-I Mark II uses a single 3 Watt Luxeon sitting behind a sapphire crystal lens with an internal AR coating. The aluminum reflector has been custom designed to help with the tint of the light produced by the LED, resulting in a very white light output. It uses a special boost circuit that helps regulate light levels and has three levels of output plus a strobe mode. Normally running on a single AA (alkaline, lithium, or NiMH) you can purchase a 123A tube or an extension to run the light on 2 AA cells. Even AAA cells can be used if that is all that is available. The body is Type III anodized aluminum for light weight and durability. Dual O-rings seal both ends of the light for a high degree of water resistance. The tailcap switch covers are interchangeable and the tailcap has notches/holes for attachment of a lanyard.

Updates: The JETBeam JET-I Mark-II is essentially the same as the original [JET-I](#) with with the following updates:

Body:

- Glow In The Dark (GITD) tailcap switch cover (looks yellow in normal light).
- GITD ring at end of reflector behind lens.
- No more glow paint in grooves on sides of AA case (empty grooves).
- Two orange O-rings on both ends of the 1AA battery tube, same on both ends.
- The flat side panels are a little smaller.
- The square checkering around the tailcap has been replaced with diamond checkering.
- The laser etching looks more refined.
- MkII etched on the side of the head opposite the serial number.

Switch:

- 3 levels of output now, plus strobe.
- Click on for "normal" output (65% of max, PWM).
- Click off, then click back on within 2 seconds to change modes.
- OR soft-press switch anytime while on to change modes.
- 2 second or greater pause after clicking off resets the sequence.
- Mode sequence: Normal, Low, Max, Strobe, Off.
- Strobe is VERY annoying - like Gladius/StrikerVG strobe.
- The mode change soft-press can be very quick. After clicking on I can get it into the strobe in less than 1/2 second (really!).

Other:

- Different belt sheath. Looks more like the Fenix now instead of the original with flap. I prefer the original, but with the flap the tailcap GITD is covered up.
- No need to clean up the battery tube ends with sandpaper for better contact. This issue has been resolved.
- The 123A tube from the original JET-I fits, but, it just barely screws on enough to cover the highest point on the O-ring. Looks like you may need a new 123A tube to fit the new head if you have an older tube. I'll bet it's because the electronics in the head moved the contact plate back on the threads a bit.
- The 2-AA extension tube fits fine.

New vs. Old - side-by-side

A quick note about the GITD ring in the bezel and the tailcap cover. The glow is subtle. In the dark - the real dark - you'll be able to very quickly pick out the light. If there is background light, you may not see the glow well, but then again, you can probably see the JET-I without needing the glow either.

Output: From the original review, you already know what the circuitry inside the JET-I can do. Now we have 4 output options: Normal (65%), Low (5%), Max (100%), and Strobe. The strobe is very annoying, like the [Gladius](#) or [StrikerVG](#) strobes which are designed for tactical use.

Dimming is accomplished using PWM or Pulse Width Modulation. The LED is flickered very rapidly to give the illusion of dimming. Your eyes do not perceive the flicker unless you move the light quickly across a surface or if the subject being illuminated moves quickly. The flicker may be perceivable when reading in the dark using the light, and some folks find this annoying.

I did note (and you probably will, too) that the Max output is less than the original JET-I. The maximum output produced by one AA alkaline has dropped by about 18%. The rest of the output numbers have dropped as well.

1 Alkaline AA	Throw	Overall Output
---------------	-----------------------	--------------------------------

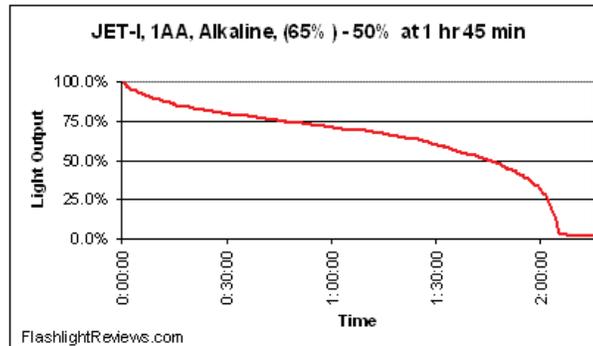

Flashlight Reviews and LED Modifications

Normal (65%)	400 (20.00)	1300 (13.00)
Low (5%)	37 (6.08)	126 (1.26)
Max (100%)	565 (23.77)	1800 (18.00)
2 Alkaline AA		
Normal (65%)	800 (28.28)	2700 (27.00)
Low (5%)	68 (8.25)	200 (2.00)
Max (100%)	1100 (33.16)	3750 (37.50)
1 NiMH 2700 AA		
Normal (65%)	390 (19.75)	1268 (12.68)
Low (5%)	38 (6.16)	124 (1.24)
Max (100%)	530 (23.02)	1750 (17.50)
2 NiMH 2700 AA		
Normal (65%)	760 (27.57)	2650 (26.50)
Low (5%)	63 (7.93)	205 (2.05)
Max (100%)	1026 (32.03)	3650 (36.50)
1 Lithium L91 AA		
Normal (65%)	430 (20.74)	1380 (13.80)
Low (5%)	42 (6.48)	132 (1.32)
Max (100%)	580 (24.08)	1900 (19.00)

All throw readings are in [Lux](#) at one meter. The numbers in parenthesis are for comparison in the [Comparison Charts](#).

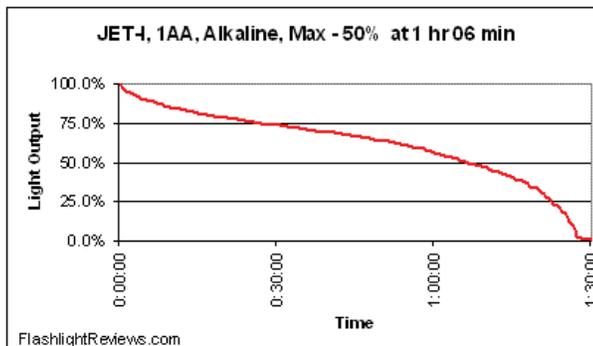

Runtime Plots: More runtimes will be added as time allows. So far, I'm seeing a drop in the runtimes relative to the original model. I wonder if the new circuit is drawing a fairly significant amount of power, or if something else is going on.

1 AA alkaline cell, tested at the "Normal" (65%) setting.

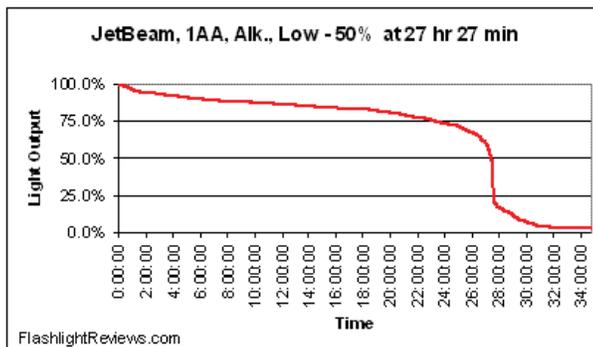

Runtime completed with Rayovac brand batteries. More information on runtime plots is available [HERE](#).

1 AA alkaline cell, tested at the "Max" (100%) setting.

Runtime completed with Rayovac brand batteries. More information on runtime plots is available [HERE](#).

1 AA alkaline cell, tested at the "Low" (5%) setting.

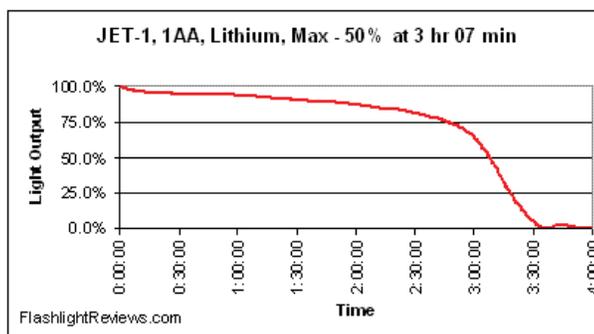

Runtime completed with Rayovac brand batteries. More information on runtime plots is available [HERE](#).

1 AA Lithium cell, tested at the "Max" (100%) setting.

Runtime completed with Energizer L91 brand batteries. More information on runtime plots is available [HERE](#).

Photo Gallery:

In package, and new sheath

Tailcap, glow close-up

Glow ring in bezel, above reflector

Side grooves empty of glow material

What I Liked: Water resistant, Tough HA-III finish, Impact resistant, Regulated, Good battery life, Bright, Easy battery change, Lightweight, Lots of battery options, Multiple output modes

What I Didn't Like: Nothing.

Picky Little Things: A little bit of a drop in output and runtime relative to the original version, but not horribly so. Quite possibly a give-and-take for having the new multifunction circuit added in to the system.

Conclusions: We all have our "flavor of the month" when it comes to our favorite things. I suspect that this latest version of the Jet-I is going to be quite a bit more than that. The folks at JetBeam first created a light which had excellent features and capabilities and have now improved upon it without adding a ton of useless garbage, as is what often happens when something is "improved" by its maker.

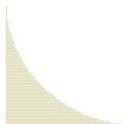

The new switching is quite well done and the output options are super. The 65% "Normal" mode preserves battery life while giving plenty of light. The 5% "Low" mode is great for night time use.

Adding the GITD tailcap and glow ring in the bezel just makes sense. I don't know about you, but a light on my nightstand has the tailcap pointing up, toward the bedside light, where a GITD tailcap switch can get a good charge before turning the light off for the night. Likewise, the glow ring in the bezel charges when the light is turned on, unlike the side panel glow paint in the original JET-I.

Quick Facts Table:

Item Reviewed.....	JETBeam JET-I MK-II
Review Date	July 2006
Case Material	Type III anodized aluminum
Case Features	Glow in the dark tailcap/bezel, lanyard attachment point, colored switch covers
Case Access Type	Unscrew head or talicap
Switch Type	"Reverse" clickie, 4 output types
Reflector Type	Textured aluminum
Lens Type	AR coated sapphire window
Bulb Type	Luxeon III LED
Beam Type	Spot
Beam Characteristics	Smooth; visible spot, corona, and spillbeam
Throw (Lux) at 1m (click for description)	See chart above
Overall Output (click for description)	See chart above
Battery / Power Type.....	AA, AAA, 123A (optional body), others as well...
Battery Life (advertised)	1 AA: 80 minutes; 1 AA or 123A: 60 minutes
Battery Life (test results)	See charts above
Environmental Protection	Double O-ring seals, rubber switch cap, dunkable
Weight (oz.) with batteries	1AA: 2.3; 2AA: 3.7; 123A: 1.6
Special Items of Note	Lanyard, sheath, switch caps included. Optional 2AA and 123A tubes.
Warranty	
Retail Cost
