trying to fill out social security form on line. asks for first name middle initial, last name and suffix, since I am not a jr., sr., etc I typed in none in this box, and I cannot go past this line as it keeps telling me I have filled it out wrong. I also typed in n/a, left it blank and I still have the same problem!. I know my own name , what gives, fed up!!!!

CES 2014: Nite Ize Steelie Mobile Phone/Tablet Mount

Posted on **February 6, 2014** by **Trevor Freeman**

Like { 0 } Tweet { 1 } { g+1 } { 0 }

1

With so many great location-based apps available for smartphones and tablets, it makes sense to use them on the road. But how do you secure a device to your car's dashboard, while also making it easy to remove for safekeeping? One way to do that is with a car mount kit from **Nite Ize** (pronounced "night eyes").

The Steelie Car Mount Kit consists of two pieces: a big chrome ball and a magnetic ring. The ball attaches to your vehicle's dashboard and the ring attaches to the back of your device. If you don't have a super square dashboard, don't worry. Each item is secured in place with 3M's super-strong VHB tape.

A powerful neodymium powerful magnet within the ring holds the phone or tablet in place. It can be tilted or swiveled to virtually any angle! Removing the phone or tablet takes just a gentle amount of force to separate the device from the base.

What makes the Steelie Car Mount different from other in-dash mounts is that it does not attach to the windshield, which can block visibility. It is also not a dock or cradle, which means that all of the device's buttons and ports are accessible.

Another cool thing about the Steelie Car Mount is that you can install the bases in multiple vehicles, which is useful when frequently moving the same device between two or more vehicles. For example, using your smartphone in your work vehicle and in your personal vehicle; or moving a small tablet between your car and your spouse's car.

The whole thing is relatively inexpensive. The Steelie Car Mount Kit is just \$34.99, and additional rings are available for \$14.99. It seems like a good price for a no-drill system that's completely removable. Have you tried the Steelie Mount (or another in-car mounting system?) Post your thoughts and let us know!

Running at Night Safely with Nite Ize

02/01/2015

Hi Running Buddies!

How is your running going? Are you getting your miles in? If you are like me, you do most of your training runs after work and since it is winter that means it's dark. Lame! Today I want to talk to you about running safely at night with the help of Nite Ize.

Disclaimer: I received a box of Nite Ize products thanks to Bibrave's BibRavePro ambassadorship. You can learn more about becoming a BibRave Pro & check out BibRave.com to find and write race reviews. As always, all opinions, typos, and silly pictures are my own.

Safety Tips for Running at Night

First let's go over some safety tips for running at night.

Running at Night Safely with Nite Ize - Run Ginger Run

Don't mind me, just lit up like a Christmas tree...

Don't run alone. Call me, I'll run with you!

Run in a public place with other crazy people exercising in the dark.

Don't wear all black! (The Hubbo is bad about this!)

Be seen! Wear light-up accessories so you look like a freaking Christmas tree ::Insert Christmas Tree Emoji Here::

Tell somewhere when you are leaving and when they can expect you to be back

Don't assume the car will stop for you.

Keep your cell phone with you in case you need to call someone.

Know your route and have a backup route in case something interferes.

Obviously - Don't talk to strangers! Stranger danger should still be alive and well even in your adult life.

Wear a headlamp to avoid holes and other ankle injuring obstacles.

How Nite Ize Can Help You Stay Safe

Nite Ize (Night Eyes) has a ton of helpful products on their website that aren't all related to running in the dark. They have everything from mobile device accessories to LED accessories to

Running at Night Safely with Nite Ize - Run Ginger Run

hardware. Click here to see more of their products. But today we are going to be focusing on being seen by cars, cyclists, and other runners to help us train safely at night.

First let's talk about the Shoe Lit shoe lights. I got a pink one and a green one. They have other colors as well such as red and blue. These are super easy clip to your shoe through your laces. I've had mine on my shoes for 2 weeks and I never take them off. I don't even notice them when I'm not running at night. You can order them online for \$4.49 and make all your running buddies jealous, right Angie? :)

If you were a child of the 90's like myself you will totally be super excited about this one. It's a light up slap bracelet! The SlapLit retails for \$11.99 and is full of safety, fun, and nostalgia!

(Photo bombing Chihuahua not included.)

SlapLit in the dark.

Every runner needs a good headlamp. When I first put this one and walked outside to the road in front of my house I had to be super careful because this is so bright it was shining across the street onto my neighbors house! I didn't want them to think someone was trying to peek in their windows even though I was on my side of the street! Ain't nobody got time to get arrested for being a peeping Tom-Runner!

The STS Inova Headlamp comes in blue, orange, and charcoal and retails for \$34.99.

The cool thing about this headlamp is that you swipe across the top to turn it on. If you swipe one way it is a white light that is super bright. If you swipe the other way it is a red light! It's called Swipe-to-Shine technology and it's pretty amazing. It's also waterproof.

The Visibility Test

Running at Night Safely with Nite Ize - Run Ginger Run

I decided to enlist the help of the Hubbo and his camera for this test. I'm wearing my typical winter running outfit. Blue jacket, running tights, and shoes. All have a small amount of reflective accessories that came on them. Below I took two sets of pictures. Series 1 is with my normal outfit on and wearing all my Nite Ize accessories at different distances away from the camera. Series 2 is me just wearing my normal running outfit alone at different distances away from the camera.

Which one looks less likely to get hit by a car?

Series 1

With Nite Ize on.

Series 2

With out Nite Ize on.

Guilty as charged! I run at night (or very early in the morning) A LOT and I wear black. I can't help it! It's a rock/metal thing and most of my closet is filled with darkness. But you know I'm heading to that Nite Ize website to check their stuff out. That light you wear in your head. Is it comfy? Does the glare bother you? It seems like a great idea for avoiding stuff like, getting run

RunGingerRun - Sarah

02/02/2015 2:11pm

Frank! We gotta keep you safe so you can take care of those pretty girls of yours! The headlamp is comfy to me and I don't notice a glare. The only thing is, you can't look at your running buddies when they talk to you or you end up blinding them! But it's seriously bright enough to light up the path for everyone.

Don't forget to have something light up on your back; cars need to see you from both directions! I have/use several of these products and love them! I also love my illuminite clothing! VERY reflective.

Miss Nutralicious

02/13/2015 7:21pm

Ok, this might be lame, but I wear a head lamp to early morning races and track meets just so I can see where I'm going...mind you this is pre-running. It seriously helps though!

Reply

RunGingerRun - Sarah

02/16/2015 5:08pm

Great tip! I wear mine all the time. I don't want to trip and ruin my chances at my next race!

Product Information

Precision engineered to meet the serious technical and functional needs of security professionals everywhere, the INOVA T-Series LED Tactical Flashlights offer powerful illumination, handling responsiveness, and tactical grade durability. The INOVA T4R is a best-in-class rechargeable LED flashlight. Its high powered, 571 lumen LED projects a powerful uniform focused spot and flood beam pattern up to 728 feet providing the high quality illumination needed for tactical use. Engineered with the professional in mind, the T4R has a mid body tactical switch that activates High Power, Medium Power, Low Power, Strobe, and Momentary High modes for the ultimate in versatility and performance. The T4R features a rechargeable lithium ion battery that can be recharged anytime without waiting for the battery to be fully discharged, and will recharge hundreds of times. It has a precision machined, aluminum body from solid bar

Product Details

- LED Color: White
- Lumens: High - 571 | Medium - 178 | Low - 27
- Run Time: High 1 hour 50 minutes | Medium 7 hours | Low 50 hours
- Effective Range (up to): 728ft (222m)
- Battery Type: 1 Rechargeable INOVA Lithium Ion battery included - rechargeable hundreds of times
- Recharging Time: 3 hours for full recharge
- Tactical Mid-Body Switch activates High, Medium, Low, Strobe, and Momentary High Modes
- **T4R Kit Includes:**
 - T4R LED Flashlight
 - INOVA Lithium Ion Rechargeable Battery

stock with a military-spec Type III hard coat anodized black finish and an aggressive knurling pattern for positive grip. Designed for mission-critical use, the T4R is engineered to withstand the rigors of tough duty and extreme conditions.

ADD A REVIEW

Clarence Ford
Pittsburgh

Thursday, December 11, 2014

"The INOVA T4R tactical flashlight is the best tactical light that you can buy. Competing with some of the popular brands known in law enforcement ie; (Maglight, Surefire, and Pelican) the Inova T4 is a well balanced light, with high lumen, durable high impact material which distributes the weight of the light evenly. The light is light enough to carry and hold for extended use, yet heavy and durable enough that it could withstand Impact of all sorts. The battery life is long lasting and has been reliable well through my 8hr tour of duty. By far, the best tactical light I've owned in my 14yr. Law enforcement career."

"I have always bought Inova flashlights because of their quality, durability, and warranty. This flashlight is no different. The beam that is projects is uniform and flawless with no rings or imperfections. It is very bright and powerful. It fits great in the hand and it holds a charge extremely well. It feels very good in the hand and it is built to withstand even the toughest conditions. I would buy this light again without a second thought. I highly recommend this product. You will not regret it."

HEADBAND

[Email a Friend](#)

Headband Black • 1 Unit

Designed to hold AAA, AA, or L123 Flashlights effectively and easily while freeing both your hands, The Nite Ize Headband is the original product that got our company going back in 1989. We're pretty proud that it's just as bright an idea today.

Headband - Black - \$5.99

Description Downloads FAQs Packaging

Product Information

The Nite Ize Headband was invented to solve an all-too-common problem: how to aim a flashlight with one hand while trying to work with the other. At some point in our lives, we've all experienced this frustration, maybe even tried to free our hands by balancing the flashlight on top of something nearby, holding it under our chin or in our mouth. (Mmmmm. The flavor of cold metal.)

Our Headband provides the perfect convenient, inexpensive solution. Constructed of 1" webbing, this lightweight, adjustable headpiece fits almost any AAA, AA, or L123 flashlight, and instantly turns it into a versatile headlamp. Designed to illuminate the area in your direct line of sight, it's excellent for household projects (working under sinks, changing fuses, etc.), camping, mechanical work, or fishing trips (tying lines, landing fish, or searching for that special lure before the sun is up). The Headband is

Product Details

- Designed and made of comfortable, non-elastic webbing.
- Hook & Loop fastener for one-size-fits-all design.
- Inner loop for smaller diameter flashlights, outer loop for larger diameter flashlights.
- Available in Black
- Dimensions: 26.50" x 1.08" x 1.23" | 673.10mm x 27.62mm x 31.34mm
- Weight: 1.06oz | 30.00g

fully adjustable to fit any size, and, like all of our Nite Ize products, made of high quality materials and built to last.

Jetbeam Jet-I runtime tests (various batts)

The first impressions thread of the Jet-I is here :-
<http://www.candlepowerforums.com/vb/...d.php?t=116567>

There are useful reviews and comments in that thread. I decided not to bury the runtime tests in there as it might not be obvious that tests have been done, so I decided on a separate thread.

Some photos first before I start :-

The Runtime Tests

AW 14500 older model, 750 mah

Starting Resting voltage : 4.15v

End voltage : 0v (Protection PCB kick in)

100% lumen **estimate** (based on my DIY lightbox) : 78 lumens (In the impressions thread, I mentioned 95 lumens, but after some recalibration of the lightbox again with my Fenix, 78 came up. 78 vs 95 will not be easily visible to the eye anyway.

Update 5-5-06 : Realised my infrared thermometer might be spoilt so I removed the temperature graph.

If not held in hand to conduct the heat, the Jet-I becomes SCORCHING hot (as do most small, powerful lights 🌡️)

Sanyo 2500 mah NiMh AA *added 5-5-06*

Starting Resting voltage : 1.4v

End voltage : 1.12v

100% lumen **estimate** (based on my DIY lightbox) : 33 lumens

[Click here to view the original image of 855x338px.](#)

The light can still go on with usable 'moon mode' light, as also stated by Emil. but I decided to stop the test. 2 hours + of great light.

Duracell Alkaline AA *added 10-5-06*

Starting Resting voltage : 1.49v

End voltage : 0.81v

100% lumen **estimate** (based on my DIY lightbox) : 30 lumens

[Click here to view the original image of 855x355px.](#)

vs Emil's chart

[Click here to view the original image of 855x383px.](#)

Re: Jetbeam Jet-I 14500 runtime test

Kind of a wonky plot. Looks like it holds its brightness pretty well though. +/- 10% output isn't really noticable under regular use.

Actually, now that I think about it, the plot looks about right. If it detects 3.7-4.2V (lithium ion) it runs in direct-drive mode until it stabilizes its voltage to "normal" and the light switches to 3W regulated. Pretty cool.

Re: Jetbeam Jet-I 14500 runtime test

I mentioned in the other thread, the Jet-I seems to run DD when the 14500 is 3.9-4.2v (as stated by Emil, for around the first 10 mins), then regulation kicks in (estimated arnd 3.7-3.8v) and the output and temp goes up accordingly.

Edit : Ok, you caught it

SomyNex, thanks for the comments. I kinda like how that turned out too

 **Re: Jetbeam Jet-I 14500 runtime test**

If they can keep costs low and make this multiple brightness, or just 3-stage, this would definitely be THE budget EDC. With tritium options, it just makes the deal even sweeter.

Even now, it is a great EDC. Super bright, 2-stage coming soon (don't know what the lower mode will be like), good quality (save minor contact issues and stiff switch), nice finish, versatility with batteries (even AAA!!), double o-rings on both ends etc...

I would be interested to see the runtime on 2 x AA setup, which is the only other way to run the Jet at 3w. Theoretically, it should last about 1 hour on that setup, (assuming 2 good 2500mah NiMhs).

The difference between 1AA and 2AA is MUCH smaller than from 2AA to 1 14500, at least on my light. I would really like to see the difference in output between 2AA and 1 14500, all I can say right now is that they are not even close.

 **Re: Jetbeam Jet-I 14500 runtime test**

Updated with Sanyo 2500 runtime chart. My battery has had about 14 cycles, a mix of slow (800 ma) and fast (2500ma) charging.

Location: Mushroom S'pore
Posts: 1,943

auriga, you mean 2AA doesn't seem to run it as bright as the 14500? Hmm, I am assuming the 2AA runs it at true 3w and the 14500 might overdrive it to maybe around 4w, based *roughly* on voltage x batt current draw.

 **Re: Jetbeam Jet-I runtime tests (14500, Sanyo 2500)**

Not sure, cheapo, I don't own a KL1.
 I'm getting around 2760 max lux from 1m on my Lux meter. My gladius max gets 3200.

The beam is very nice, and the hotspot has no donut hole, even when very very close to a surface. It throws very well, just that probably not as much as bigger optic/reflector lights.

 **Re: Jetbeam Jet-I runtime tests (14500, Sanyo 2500)**

LEDcandle- I'm not sure about the terminology, but you mentioned the PTC in your cell- does that mean it's protected? I have the new AW protected 14500, and it's too long to fit. It sticks out of the end of the tube just long enough to prevent the tube from reaching the contact.

I would really rather use protected cells- does anyone know where I could score one that will fit and can be used in the DSD charger?

 **Re: Jetbeam Jet-I runtime tests (14500, Sanyo 2500)**

Brick, I see that you've settled it by making the threads the contact point 😊 Great to hear!

The PTC is a "positive thermal coefficient". I don't know how to explain the whole mechanics of it, but anyway, I was referring to the 'protective strip' that runs along the batt body in protected batts. That usually increases the diameter of the batt and thus some protected batts cannot fit in a tube that a normal CR123a or unprot R123a can fit into.

Add : I believe the PTC exists in unprotected batts too, and it protects all these batts from thermal runaway. The more correct term to refer to the voltage protection on

Protected Battts is the "Protection PCB" (as there is a circuit board installed at the bottom of the battery) and the protective strip is part of the setup.

I haven't done that yet, I'm just thinking out loud. To be honest, I'm somewhat hesitant to permanently modify my new toy just yet. Leaving it as it is allows it to be used as a twisty in a pinch, and I don't know how it would affect the upcoming two-stage switch, if at all. If I could find slightly shorter protected 14500s, that'd be the way to go. It looks like Lighthouse also has the new 14500s, and Battery Station's also seem to be longer than a standard AA. I guess another option would be to use some kind of round spacer, like a perfectly sized washer with a big hole in the middle to stick in on top of the contact in the switch body, but I don't know if such a size would be easily obtainable.

Re: Jetbeam Jet-I runtime tests (14500, Sanyo 2500)

Can the 14500 batteries be charged in the Energizer 15 minute charger?

I have never used a 14500. Am I right in that one 14500 replaces one AA battery? I was somewhat confused by the post above.

Olight S1, EagleTac D25C Ti, 4/7s Mini MLX, 4/7s Mini MLR2, ITP

A3 EOS, 4/7s Atom A0. Circa 2007: Orb Raw NS (UWOJ), VB-16 (4th), Fenix L1T 2, Liteflux LF2 (SSC P4), Fenix L0P-SE (SSC mod), Amilite Neo T5, Peak Caribbean, Jetbeam CL-E, Fenix L2P (CR2 mod), JIL CR2.

Re: Jetbeam Jet-I runtime tests (14500, Sanyo 2500)

The 14500 is a Lithium Ion, 3.7v battery and needs Li-on charger like the DSD , or other capable chargers like the Triton. If you are talking about the Energizer NiMh charger, then nope, it won't work 😊

It is classified under AA size, although it might be slightly longer/fatter as reported. Mine works in the Jetbeam, although the springs inside are probably compressed to the max when I tighten my light.

Nano charger edited out; Planterz below is right. So far I have only seen it in 123a size, although those with a little handy skills and equipment should be able to wire a 14500 up externally to the charger. I believe that will work? Pls correct me if I'm wrong.

Re: Jetbeam Jet-I runtime tests (14500, Sanyo 2500)

Maybe there's different sized Nano chargers, but the only one I see regularly is the 123A sized ones (which a 14500 won't fit in). Most people (including myself) go with a DSD charger which you can order with spacers that'll allow the 14500 to fit.

Most lights that are designed for a AA battery won't work with a 14500 because the 14500 is slightly longer (and would fry most of them anyway). It won't fit in a Fenix L1P for example.

 **Re: Jetbeam Jet-I runtime tests (14500, Sanyo 2500)**

Regarding those long 14500s, I did get AW's new longer 14500s to work. I'm not sure exactly how I did it, though. I took some copper strand wire and made a ring out of it to fit in the head end of the JET-I and allow a few extra mm for the AA tube to be able to reach the contact. I started out with 5 strands, which was a little too thick, so I kept taking out strands until I got down to two. This was of negligible thickness, so I tried taking it out, and lo and behold, the light still works. After fooling around with it a little, I found that if I tighten down the switch and install the cell from the head end, it works, but not if I install from the switch end. However, if I install from the switch end then loosen and retighten the head, it works. It seems as though maybe the tolerances in my switch are very close, and I have to tighten the switch down fully *before* I put the 14500 in? In any case, I'll keep those copper rings for awhile in case this stops working.

So far, good to go!

 **Re: Jetbeam Jet-I runtime tests (14500, Sanyo 2500)**

Thanks for the plots - nice work. Does anybody know where to get details on how well the 123 version runs?

 **Re: Jetbeam Jet-I runtime tests (14500, Sanyo 2500)**

if i can get a confirmation that this light on 14500s is as bright as a kl1, and that 2 stages will work, i will seriously look into it.

-David

Based on estimated specs (from Quickbeam's site), the KL1 is only about 30 lumens. I used to own a KL3, which is suppose to be in the same ballpark as KL1, and I got about 34 lumens from my lightbox (Quickbeam's KL3 review gets about 30 lumens).

The Jet-I is definitely brighter than the KL1... it is even brighter than my particular Gladius on max. I'm sure the KL1 and KL3 can be monsters too, but looking at their runtime, you know they were set for low current draws (my KL3 drew about 220ma). The Jet is drawing about 1+ Amps.

The only thing to confirm is whether the 14500 works with the 2-stage clicky 😊

Reviews Features Mods Q&A Links

JETBeam JET-I

Provided for review by the kind folks at:

5 Stars
Excellent

Light Type: Luxeon III LED

Light Class: Outdoor / Rough Use / Etc.

IMPORTANT: This light is no longer available in this form. When you are done reading this review, you will need to read the [JETBeam JET-I Mk-II review](#) to see what updates have been made to this light.

The JETBeam JET-I is a new light from Emilion's Workbench. This little pocket-rocket is the closest thing you'll probably come to a completely custom flashlight, because, well, it is a completely custom flashlight. Designed to include many great features, it is an amazing little personal illumination device.

The JETBeam JET-I uses a single 3 Watt Luxeon sitting behind a sapphire crystal lens with an internal AR coating. The aluminum reflector has been custom designed to help with the tint of the light produced by the LED, resulting in a very white light output. It uses a special boost circuit that helps regulate light levels and has three notches around the body filled with glow powder impregnated epoxy to help you find the light in the dark. Normally running on a single AA (alkaline, lithium, or NiMH) you can purchase a 123A tube or an extension to run the light on 2 AA cells. Even AAA cells can be used if that is all that is available. A number of accessories are included with the light as well.

PLEASE NOTE: This is a "small run" light, which means that it is about as close to a personally-designed custom-crafted light as you can get without having one hand made just for you. It was not designed by a huge manufacturer, but by an individual who wanted to make an exceptional light, and the parts were machined and built by a factory that was commissioned to do much of the work. Some of the work done on the light is "by hand" by the individual who is making and selling the light, before being shipped to the consumer. You may want to consider these to be "pre-production" lights. Like any piece of machinery that is a new release from a custom shop, it may need a little TLC and slight adjustments to make it the best that it can be. Don't get this light unless you are ready to do a few simple little tweaks to make it "perfect". More on this later.

**Body:**

The body of the JETBeam JET-I is aircraft grade aluminum with a high quality HA-III natural (gray) finish in order to give the aluminum a high degree of abrasion resistance. The two ends of the body tube are different. The head will only thread on one end, and the tail will only thread on the other end. They are not reversible. Also, the O-rings on each end of the tube are a different color - red on one end and orange on the other. An easy way to remember which side is which is by using the color of the O-rings: Red is for the Head.

The head of the light is unadorned except for the unit's serial number etched around the base of the head. The body has three flat panels to assist with grip. The tailcap is surrounded by a box pattern in three rings which improves grip. The tailcap also has two holes and an notch. This is for placement of a split ring through one hole which could then fold into the notch for standing the light on it's tail. The tailcap switch is covered with a black textured rubber cap and two spare rubber caps are included - one red and one orange. The switch does protrude slightly beyond the tailcap, making it a little difficult to stand on end. You can adjust the pressure that the inner switch puts on the rubber tailcap cover, retracting it slightly if you are adventurous and want to disassemble the tailcap. However, this may render your light no longer waterproof as there will be no pressure on the rubber cover to keep water out.

2AA extension tube (Attaches to included AA tube to allow one more AA); JET-I in center; 123A tube.

1 AA tube and 123A tube in normal light, with lights out to show glow epoxy on sides

The optional AA extension tube attaches to the end of the light where the tailcap goes. The tailcap is then transferred to the end of the extension tube to create a 2 AA flashlight. The 123A tube replaces the normal AA tube and tailcap and changes the light from a click on-off light to a twist on-off. Since there is no switch on the 123A tube, this results in a very small light.

Only the standard AA tube and the 123A tube have the glow-in-the-dark epoxy on the sides. The glowing compound is harmless and only glows when "activated" by exposure to light. The glow compound rests in three grooves around the body of the light. I found that the AA tube's glow compound had a granular appearance and was not as bright as the compound on the 123A tube.

About those little "tweaks" I mentioned:

You may note that the AA tubes (both included and extension tube) have dual O-rings on them. I found that the tailcap was a real pain to put on and take off of the tubes unless I removed the outermost O-ring on the end where the tailcap attaches. This makes it much easier to assemble and disassemble while still

maintaining a good degree of water resistance. This is really a personal preference issue.

Many users of this light found that there was an advantage to removing the O-rings and scrubbing the threads with an old toothbrush dipped in isopropyl (rubbing) alcohol. There may be a little grit on the threads and this extra step will make it easier to use as well as help the light last much longer. If you choose to clean the threads inside the head and tailcap, do so very carefully and don't allow the alcohol to get inside the electronics. Keep them tipped open side down and use a bit of cloth or Q-Tip to clean the threads. Don't forget to lube the O-rings and threads with silicone grease before re-assembly. Cleaning the threads is completely optional, and is a good idea for any new light you get.

Some folks had a problem where the light would not work upon assembly unless they really screwed the tailcap on very tight. This is a minor bug that the designer needs to work out with the factory before their next manufacturing run. If you do experience this problem, the fix only takes about 2 minutes to do. What appears to be happening is that a thin layer of the Type-III anodize may be coating the exposed aluminum at the end of the tube. This can be fixed by placing the tube upright on a piece of 400 grit sandpaper and sanding the very ends. If you choose to try to do this, it is AT YOUR OWN RISK (I have to say that so you don't blame me if you muck up your battery tube). Rub the tube in circles gently so that the end of the tube is abraded and any anodize is stripped off. It's best to put the sandpaper on a flat hard surface to do this work and carefully rub the flat bottom of the tube in circles on the paper. When the grit turns into an even field of gray, you should be done. This work can be done to both ends of the tube. Be sure to sand just the END of the tube, not the SIDES or the THREADS.

Bezel/Head:

The JETBeam JET-I uses a single 3 Watt Luxeon sitting behind a sapphire crystal lens with an internal AR coating. The aluminum reflector has been custom designed to help with the tint of the light produced by the LED (details are not being given - trade secret), resulting in a very white light output. The reflector is textured to smooth out any imperfections in the beam. The JET-I head also contains a special boost circuit that helps regulate light levels and allows the JET-I to operate on several types of batteries. The circuit is an auto detect Current Regulated Circuit that will attempt to regulate the light output when the source voltage is anything from 4.2 Volts to 0.7 Volts.

4.2v - 3.7v - Direct drive from cells (Drives LED at something around 4 Watts).

3.7v - 2.2v - Drives LED at 3 Watts

2.2v - 1.0v - Drives LED at 1 Watt.

< 0.7 v - The circuit will continue to draw any current it can to light the LED

Output: The white light produced by the LED is exactly that, white. No tint is detectable. Whatever they did to the reflector to make it help with the light tint, it must be working. The beam has a bright central spot with a tapering corona and wide spillbeam. I put the runtimes to 50% in the chart below for convenience. Note that the runtimes on two cells is often shorter than the runtime on one cell.

Battery Type	Throw	Overall Output	Time to 50% output
1 AA Alkaline	688 (26.23)	2200 (22.00)	1 hr 18 min
2 AA Alkaline	1200 (34.64)	4200 (42.00)	1 hr 00 min
1 AA Lithium L91	748 (27.35)	2500 (25.00)	3 hr 08 min
2 AA Lithium L91	1350 (36.74)	4800 (48.00)	2 hr 45 min
1 AA NiMH	616 (24.82)	2070 (20.70)	2 hr 02 min
2 AA NiMH	1135 (33.69)	4000 (40.00)	1 hr 32 min
1 123A Lithium	1145 (33.48)	3430 (34.30)	1 hr 08 min

All throw readings are in [Lux](#) at one meter. The numbers in parenthesis are for comparison in the [Comparison Charts](#).

Beam at one meter at target center.

Runtime Plot:

This time I decided to do the runtimes a little differently. Here they all are on the same graph, with the graphs adjusted for initial starting output. Runtimes completed with alkaline AA, lithium AA, NiMH, and 123A cells:

Alkaline Runtime completed with Rayovac brand batteries.
 Lithium AA Runtime completed with Energizer brand L91 AA batteries.
 NiMH Runtime completed with Energizer brand 2300 mAh batteries.
 123A Runtime completed with "Titanium" brand batteries.
 More information on runtime plots is available [HERE](#).

Switch:

The switch is covered by a textured rubber pad and is considered to be a "reverse clickie". Press until it clicks for on, press gently after "on" to blink. Press again until it clicks for off. Nothing else really to report here...

**Seals / Water Resistance:**

Single or double O-ring seals protect most of the light and the head is sealed. It should be considered "dunkable" but is not intended for diving (although some third parties have reported taking it for a swim in the pool without any problems.)

If it gets wet inside, just disassemble as much a possible without tools and let it dry before using again.

Ergonomics:

The triangular profile of the body tube makes it feel a little weird, but it's hardly worth mentioning. Some folks using this light have found that the switch is hard to press, but I did not have any issues with it. You may need to press in on the switch cap with the tip of your thumb instead of the pad of the thumb in order to activate it.

Keep in mind that in use this light will get hot during use. If you keep your hand wrapped around it, the heat should not get to the point where it is uncomfortable since your body's own circulatory system will act as a heat-pump and move the heat away from the light. If left in open air for a while and you grab it, it may scald your hand. Use caution!

1 AA configuration (standard) compared to a common 2AA aluminum light

2AA configuration (optional) compared to a common 2AA aluminum light

123A configuration (optional) compared to a common 2AA aluminum light

Batteries:

Utilizing the various battery tubes it can use the following battery options:

- 1 AA alkaline (AA tube)
- 1 AA NiMH (AA tube)
- 1 AA L91 Lithium (AA tube)
- 1 AAA alkaline (fits in AA tube)
- 1 AAA NiMH (fits in AA tube)
- 1 AAA L92 Lithium (fits in AA tube)
- 2 AA alkaline (AA tube + AA extension)
- 2 AA NiMH (AA tube + AA extension)
- 2 AA L91 Lithium (AA tube + AA extension)
- 1 14500 Li-Ion rechargeable (AA tube)
- 123A Lithium (123A tube)
- 123A Protected Rechargeable Li-Ion (123A tube)
- 123A Unprotected Rechargeable Li-Ion (123A tube)

If using the optional 123A battery tube, I would recommend [Titanium](#) brand cells for \$1.00 each ([here's a review](#)) or [BatteryStation](#) or [Surefire](#) brand cells for less than \$2 each. I would not recommend purchasing these cells at retail stores since they cost \$10 a pair or more in most retail stores!

To change out the batteries: unscrew the tube, drop out the old cells, place in new cells observing proper polarity. Reattach the tube and you're ready to go.

Accessories:

Included with the light is a belt pouch for the 1 AA configuration, a lanyard and two switch covers - one red and one orange (the red doesn't look that good in the picture below, but it is very "red").

What I Liked: Water resistant, Tough HA-III finish, Impact resistant, Regulated, Good battery life, Bright, Easy battery change, Lightweight, Lots of battery options.

What I Didn't Like: Nothing.

Picky Little Things: I had to remove one O-ring from the tailcap end to make installation of the tailcap easier. Threads needed a good cleaning.

Conclusions: Overall the JETBeam JET-I an excellent light. Well designed, very bright, and very versatile. I consider the JET-I to be a premium, essentially custom, light, and in my opinion it is a bargain at the offered price. You may need to do make some very slight adjustments on this first run of the JET-I, but I'm still giving it 5 Stars.

Quick Facts Table:

Item Reviewed	JETBeam JET-I
Review Date	June 2006
Case Material	Type III anodized aluminum
Case Features	Glow in the dark panels, lanyard attachment point, colored switch covers
Case Access Type	Unscrew head or tailcap
Switch Type	"Reverse" clickie
Reflector Type	Textured aluminum
Lens Type	AR coated sapphire window
Bulb Type	Luxeon III LED
Beam Type	Spot
Beam Characteristics	Smooth; visible spot, corona, and spillbeam
Throw (Lux) (click for description)	See chart above
Overall Output (click for description)	See chart above
Battery / Power Type	See options above under "Batteries"
Battery Life (advertised)	1 AA: 80 minutes; 1 AA or 123A: 60 minutes
Battery Life (test results)	See charts above
Environmental Protection	Single and double O-ring seals, rubber switch cap, dunkable
Weight (oz.) with batteries	

1AA: 2.3; 2AA: 3.7; 123A: 1.6

Special Items of Note

Lanyard, sheath, switch caps included. Optional 2AA and 123A tubes.

Warranty

Product Description

The EYE30 was Niteye's first flashlight. World-wide it is the best seller. Very few flashlights on the market can produce 2000 lumens, not to mention 2000 lumens from such a small unit. The EYE30 has unique features which makes it stand out from its competitors, such as: Three separate reflectors, battery level indicator, removable grip handle, many different battery configurations and direct charge from a 12V car adapter.

The EYE30 comes with: 4 x 2600 mAh Li-ion batteries, built in charger, 12V car adapter and 100 – 240 V home charger.

Light source: **3 x Cree XM-L U2 LEDs**

Material and finish: **Aircraft grade aluminium and HA III anodizing**

Rated max lumen: **2000**

Beam distance: **380m**

Modes and runtimes: **2000lm – 2h / 1000lm – 3h / 300lm – 12h / 60lm – 55h**

Battery: **4 x 18650 2600 mAh Li-ion (included) or 8 x CR123 cells**

Water resistance: **IPX 8 at 2m**

Features:

- **Magnetic control ring**
- **Constant current regulation**
- **Stainless steel bezels**
- **Battery level indicator**
- **3mm AR coated lenses**
- **12V Direct charge**
- **Removable grip handle**

Dimensions: **Length: 145mm / width: 66mm / depth: 66mm**

Weight: **396g** (excluding batteries)

1 review for Niteye® EYE30 Flashlight

Andre Solomon – October 18, 2013:

I have the Desert edition of the EYE30. It is basic exactly the same, just powder coated in a sand colour. The quality of this light is extraordinary. The handle really improves its usability. The stainless steel bezel rings are placed at all the vulnerable places and does not only protect but also looks great. Every last detail is sought after, even the metal battery cage. The EYE30 weighs quite a bit, but considering 2000 lumens out of three LED's, there's going to be a lot of heat and to compensate for that they upped the aluminium thickness in the head. Using the magnetic control ring is intuitive and one hand operation is easy. There are eight modes to choose from and I have found that even the lowest mode of 60 lumens, has ample of light. We went camping next to the Orange River and had to set up camp in pitch darkness. I made the flashlight stand whilst aimed at the setup site and the light was sufficient. And knowing that we had 55 hours of low mode was very reassuring, and knowing that there is 1940 lumen still on tap, that's nice. The beam pattern is beautiful. I had no need for a zoom function between focus and flood because the beam pattern combines both, flooding with light the area in front of you while still reaching 380 m afar. You won't be caught off guard with flat batteries if you keep an eye on the battery level indicator. I had to replace my first o-ring, but fortunately a spare one was provided. Using the EYE30 is a blast and I can recommend it to anyone.
