controls to display the ribbon before you can see the Portal Site Connection. Branding guru Randy Drisgill has a great post on how to do this: http://blog.drisgill.com/2010/09/converting-custom-sharepoint-2010.html

It may blank as Publishing sites can't use the Portal Site connection. They use a different set of SiteMapProviders which don't honour the Portal Site Connection.

Enterprise Search Center sites are actually publishing sites, so even if you do change the master page to be more like a team site, you may end up with 'weird' navigation effects.

(You might get away with it, but for typical publishing sites the navigation would certainly be wrong.)

See http://www.novolocus.com/2011/02/10/portal-site-connection-and-publishing-sites-in-sharepoint-2010/

Its like you read my mind! You seem to know a lot about this, like you wrote the book in it or something. I think that you can do with a few pics to drive the message home a bit, but other than that, this is excellent blog. A fantastic read. I'll certainly be back.

The new apps this month are Hue Command Center and Snoozy Alarm Clock . Check them out in the itunes store! Congrats to the makers, @jjapps and @mangoldm!

No connection to Web Portal when DSL modem is set to "router" mode For support look here first

tommcm January 28

I had 8 Hue bulbs working perfectly with Web Portal and 3 iOS devices. I then had to replace my DSL Modem. Everything stopped working then.

I have deleted my original Portal account associated with the original modem at this point, thinking the Web Portal was looking for my old modem. I currently have smooth operation with my iOS Devices but my computer (Mac) will not connect to the web portal. It does "see" the portal but when I run the connect process it times out and does not connect. It also then makes all my IOS devices unable to connect reliably to the bridge. Sometimes they work, sometimes they say "Bridge not Found".

I have, countless times, reset Bridge, deleted Hue App on all devices, reinstalled everything on devices, rebooted router, modem and computer and can basically get my devices working OK but when I eventually try to connect to Web Portal everything craps out.. the Bridge lights flash.. devices all lose bridge connection and I have to delete everything and reinstall to be able to use my lights. I am getting pretty good at re-installing everything and have become quiet the expert at re-doing all my scenes but it is kind of getting old. I can live without the Web Portal but obviously there are some advantages to connecting so if I could, I would.

I did attempt to get support through Philips, was told I would be escalated to higher level but have not gotten a response yet.

Suggestions?

Thanks,
Tom McMillan

EddieZ February 7

You replaced a router/modem and faced difficulties, but you ask Philips (Hue) to resolve the issue. It would make more sense when you would have contacted the dsl modem manufacturer...

Hi @tommcm would you mind sharing what was the problem? Perhaps other readers will be helped that way. Thanks!

Accepted Answer

New DSL modem (modem only, not a DSL Modem/Router) default was set to "Router" mode rather than "Bridge" mode. Changing modem to Bridge mode allowed me to connect again to Web Portal. My setup is NetGear DSL modem using Apple Time Capsule as router.

Part of my troubleshooting included re-attaching my old DSL modem, which had successfully been connected to Web Portal. When my old modem would no longer let my Bridge connect to Web Portal I made the erroneous assumption that the problem was with the Portal.
