Thanks for your reply. By the way, I have reinstall SSL VPN client for tunnel mode, unfortunately, it's not working and the problem still persist. Do you have other suggestion?

Can you connect just using the standalone SSL VPN client? Start there, to see if you can connect.

Also what web browser are you using to connect to the SSL VPN web portal?

HI Cazi,

Apologize late reply,. For your question, i cant using the standalone SSL VPN Client too. my website browser is IE.

For your information, i can use the SSL VPN user ID on other PC, it working fine on other PC too. Only one PC cant start the connect SSL VPN. i suspect is PC certain software problem or else cause it . But i still cant found which part cause it.

Check the Windows firewall. We use the Forticlient AV and Forticlient SSL VPN client and found that the Windows firewall must be disabled.

hi all,

apologize late reply. i have try all of your method, the problem still persist. Even though i have reinstall the Forticlient. I think if the problem still can be solve, i only can try reformat the PC.

Programming a Web Portal for Microsoft Dynamics CRM

1

I'm working on a web portal for customers that will connect to Microsoft Dynamics. I don't want to make Dynamics CRM directly a internet facing deployment (IFD), so I'd like to use a separate database that the web interface interacts with and then use web services to move the data between the web portal database and Dynamics CRM. I'm just looking for thoughts on whether this is the best way to proceed and whether there are any good code examples, etc. that I can look at for implementing this? I saw Microsoft has a Customer Portal but it looks like it requires (at a cursory glance) an IFD deployment - which I don't want.

First, after creating your ASP.NET project (WebForms or MVC 3), add the following references:

1. Microsoft.crm.sdk.proxy.
2. Microsoft.xrm.sdk.
3. System.Runtime. Serialization.
4. System.ServiceModel.

In your code-behind Create a class then add the following code:

```
private IOrganizationService GetCrmService(string userName, string
password, string domain, Uri serviceUri)
{
```
