Solutions - eDiscovery + Document Review - Services - DocuMatrix® Hosting

Achieve a Faster, More Consistent Document Review

With DocuMatrix®, Epiq's hosted discovery management platform, you're equipped with essential tools to achieve a reliable, quicker review. Scalable and flexible, DocuMatrix stores and manages unlimited volumes of data so even your most complex cases are handled seamlessly.

Smart Early Case Assessment and Analytical Tools

Advanced analytical features — like topic clustering, email threading, near-duplicate analysis, domain analysis and document categorization — triage your data early in the discovery process, identify documents vital to your matter and enable you to rapidly eliminate documents that have no value.

With a smaller, better-focused data set, you can then use Epiq's prioritization technology to identify and prioritize the most responsive documents for review.

Advanced Review Accelerators

DocuMatrix automates workflow and review accelerators further improve efficiency by reducing review time. Increase review speeds by up to three times, dramatically reducing **document review** costs, the most expensive component of discovery.

To minimize review downtime, attorneys can now pull documents instead of waiting for files to be pushed to them. Administrators can monitor reviewers' productivity to keep the review on schedule.
