BEFORE THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of: International Watchman, Inc.	Date: October 26, 2018
Serial No.: 87/270,077	Trademark Law Office: 114
Filed: 12/15/2016	Examiner: Yocheved Bechhofe
Title: NATO) Docket No.: SA-3452
Class: 006)
Goods: Pens, Decals)
)

BRIEF ON APPEAL

1. Background

The present application was Finally Rejected on 03/06/2018 as including subject matter that may falsely suggest a connection with the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization. This determination was, essentially, solely on the basis that the "North Atlantic Treaty Organization" is "is so well-know that consumers would presume a connection".

To support the rejection the Examining Attorney relied what appears to be exclusively the information, references and arguments from an anonymous third party Protester providing an opinion from In re North American Free Trade Association, Serial No. 74/179335 ("North American"), and a number of other references, namely, 16 pages of internet downloads, 7 pages of a single dictionary definition, 24 pages of citations from The New York Times, and 7 from the Los Angeles Times. This was provided along with some miscellaneous Google.com search results.

The Examining Attorney further finally rejected the present Application over the Applicant's overwhelming evidence and precedent leading to a contrary conclusion. It appears that all of the legal precedent and factual evidence that was provided by the Applicant was not previously considered and, in spite of this overwhelming fact and law to the contrary, the Examining Attorney ruled that the applied-for mark falsely suggests a connection with the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization because:

- (1) The NATO mark sought to be registered is the same as, or a close approximation of, the Organisation du Traité de l'Atlantique Nord; and
- (2) The NATO mark sought to be registered would be recognized as such, in that NATO points uniquely and unmistakably to the Organisation du Traité de l'Atlantique Nord; and
- (3) The applicant is not connected with the Organisation du Traité de l'Atlantique Nord in connection with the sale of its goods; and
- (4) The fame or reputation of the Organisation du Traité de l'Atlantique Nord is of such a nature that a connection with the organization would be *presumed* when applicant's mark is used on its goods and/or services. (*Emphasis added*)

In re Pedersen, 109 USPQ2d at 1188-89; In re Jackson Int'l Trading Co., 103 USPQ2d 1417, 1419 (TTAB 2012); TMEP §1203.03(c)(i); see also Univ. of Notre Dame du Lac v. J.C. Gourmet Food Imps. Co., 703 F.2d 1372, 1375-77, 217 USPQ 505, 508-10 (Fed. Cir. 1983) (providing foundational principles for the current four-part test used to determine the existence of a false connection).

2. Summary of Arguments and Conclusions

The Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization does not meet the requirements, as defined by TMEP §1203.03(a), to be a "persons" or "institution" for purposes of any "false connection" or "false association" refusals. In addition to other case law discussed below, according to Article XII of the Treaty, the Organization itself has no capability of being sued, and the individual representatives of its members enjoy a very broad immunity from prosecution. As such, no *false association* determination can nor should be made concerning Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization.

Further and in addition, the facts and law presented overwhelming indicate that

- (1) The NATO mark sought to be registered does not have the same commercial impression as the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization; and
- (2) The NATO mark sought to be does not uniquely and unmistakably point to the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization; and
- (3) The fame or reputation of the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization is not and cannot be presumed when the mark NATO is used on its goods and/or services of this application.

The applicant admits that it is not connected with the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization in connection with the sale of its goods.

3. The NATO mark sought to be registered does not have the same commercial impression as the North American Treaty Organization

a. Overall Commercial Impression

The applicant reiterates from the prosecution below that the present mark lacks similarity of commercial impression as compared with the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization. The Examiner relies also on In re NAFTA and analogizes the use of NAFTA in that case with the Applicant's use of NATO in this application. To contrast the facts of In re NAFTA, that mark at issue was a stylized acronym NAFTA accompanied by a globe logo depicting Canada, the United States, and Mexico. Additionally, the services that were being registered were "promotion of trade and investment among the United States, Canada, Mexico and other countries; providing information an consultation to members regarding the issues and effects of a free trade area on their investments".

In that case, such a description of services was very much closely related to the purpose, function and effect of the North American Free Trade Agreement. In fact, since the <u>In re NAFTA</u> opinion, three separate trademark registrations have been registered before this Office, including:

- i. Visual NAFTA, for Software as a Service (SAAS) in Class 042. See Exhibit108;
- ii. NAFTA Works, for downloadable electronic monthly news letters in Class009. See Exhibit 109;
- iii. NAFTA Navigator, for freight management consulting in Class 035 and software in Class 042. See Exhibit 110.

Therefore, it stands to reason from the <u>In re NAFTA</u> case and the existence of supsequent registrations that the use of the acronym NAFTA, *by itself*, could not be refused under Section 2(a) of the Trademark act on the grounds of "false association" without consideration of the

overall commercial impression (see <u>In re North American Free Trade Association</u>, Serial No. 71/179335, Paper No. 27, page 6, paragraph 1"...this does not avoid the commercial impression that the mark is the same as or a close approximation of the NAFTA treaty.") As such, the difference between the four subsequently issued NAFTA-related registrations and the rejection in <u>In re NAFTA</u> must at least be, in part, based on the relationships of the goods or services as compared to the alleged institution of which a false association is being claimed.

In the present Application, the analogies between NAFTA with NATO are not particularly similar. As such, any precedential value of <u>In re NAFTA</u> simply is not applicable in this present case. Simply put, there is no similarity of commercial impression that can possibly be drawn, because:

- There are no products that can possibly be purchased from the North Atlantic Treaty
 Organization, thus meaning that the Organisation du Traité de l'Atlantique's use of the term
 "NATO" cannot possibly have a *commercial* impression, and
- The Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization is directed toward mutual national defense, and not the sale, manufacture, offer for sale, or transmission of any of the goods listed in the present Application. See Declaration of Joseph Verbovszeky.

As such, it is unreasonable to assume that any consumer could reasonably believe he or she was purchasing, in whatever category, a good or service from a source directly connected to the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization ation. Thus, neither the first nor the second prong of the <u>Pedersen</u> analysis are met, namely that

- the NATO mark sought to be registered does NOT transmit the same overall
 commercial impression of, nor a close approximation with, the Organisation du
 Traité de l'Atlantique Nord (OTAN); and
- The term NATO would NOT be recognized as pointing uniquely and unmistakably to the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization.

b. NATO as an acronym is not inherently distinctive

As background for comparison with the <u>In re NAFTA</u> case, according to www.acronymfinder.com, there are only 7 known acronyms for NAFTA, of which five (5) of them deal with free trade or fair trade among countries: North American Free Trade Agreement North American Free Trade Area; North Atlantic Free Trade Area; North American Foreign Trade Association; and New Zealand-Australia Free Trade Agreement.

There are only two other minor ones, and arguably obscure or unknown by most, for North American Fareston verus Tamoxifen Adjuvant (breast cancer trial) and North American Festival of Traditional Arts. *See* http://www.acronymfinder.com/NAFTA.html, attached as "Exhibit 75".

The present case has a sharp contrast. According to the same source, there are 11 known acronyms of NATO, with only one of the other 10 being remotely related to treaties or defense (i.e. North African Theater of Operations, See Exhibits 18-19, 22-26) and the other nine include:

- i. Night at the Opera
- ii. National Association of Tobacco Outlets (See Exhibits 15, 20, 23, 46-61)
- iii. Newcastle and Tyneside Orienteers

- iv. North American Turbocoupe Organization
- v. Not Another Teen Organization
- vi. National Association of Theatre Owners (See Exhibits 26-37, 39, 42, 45, 62-74)
- vii. National Association of Timeshare Owners
- viii. National Association of Taxicab Owners
- ix. North American Tournament Organization

See http://www.acronymfinder.com/NATO.html, attached as "Exhibit 2." See Also Exhibit 38.

Arguably, tobacco, teens, theatres, timeshares, taxis and gaming tournaments are each individually widely known by millions.

Further, in even greater contrast, according to Exhibit 2, there are fifty-two (52) other definitions for the acronym NATO. Additionally known is also the Norfolk Nato Festival, Inc.¹ (See Exhibits 3-4)

Even further, a cursory search of the Internet, the only real 'evidence' provided by the prior Opposer in this case and relied upon without question by the Examining Attorney. However, further searching found the many, many OTHER acronyms for "NATO" that the Opposer conveniently selectively edited from his or her evidence, and upon which the Examining Attorney appeared to unquestioningly follow (See Exhibit 2). These include:

- a.) NATO / North American Telemark Org. / Skiing... (see Exhibit 17, 24)
- b.) North Atlanta Tactical Organization
- c.) Northern Arts Tactical Offensive
- d.) National Association of Tenant Organization

- e.) National Academy of Television Org.
- f.) North American Tour Organization
- g.) North American Tour Operators
- h.) National Association of Tree Officers
- i) natochess.com / Chess tournaments...

Further still, searches of various other platforms aside from Google, including Amazon, Ebay, Etsy, Walmart, Sears, etc., show a variety of different products items using the brand "NATO aside from 'NATO straps or bands', including, inter alia:

- a.) NATO gas cans
- b.) NATO paint
- c.) NATO skiing
- d.) NATO movies (See Exhibit 27 through 37)
- e.) NATO tobacco (See Exhibit 15)
- f.) NATO knives
- g.) NATO apparel
- h.) NATO Ammo / shells² (See Exhibit 1, 25)
- i.) NATO Beer
- j.) NATO Catering / natocatering.com
- k.) NATO Jumper cables as used by Tesla Industries, see http://

www.teslaind.com/products-slave-cables.php, attached as "Exhibit 76".

1.) NATO Smart Mounts phone holders

¹ See http://listings.findthecompany.com/l/21482910/Norfolk-Nato-Festival-Inc, attached as "Exhibit 3"; http://nonprofits.findthecompany.com/l/550572/Norfolk-Nato-Festival, attached as "Exhibit 4".

- m.) NATO rucksack
- n.) NATO wood (See Exhibit 23)
- o.) NATO guitar

See also Exhibit 1.

Given such a huge variety of meanings to choose from, the term NATO would NOT be recognized as uniquely **pointing and unmistakably** to the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization.

4. The fame or reputation of the North American Treaty is not and cannot be presumed when the mark NATO is used on its goods and/or services of this application.

a. NATO as a word has other non-acronym meanings.

i. Of particular interest should also be the 4,620,000+ hits found on Google.com related to the NATO wood (Nato wood is a collective name for wood from Mora trees) and its use in guitars, including: http://www.harmonycentral.com/forum/forum/guitar/acapella-42/1329163-, attached as "Exhibit 5"; https://www.ultimate-guitar.com/forum/showthread.php?t=1106949, attached as "Exhibit 6"; http://www.tdpri.com/threads/what-kind-of-wood-is-nato.251061/, attached as "Exhibit 7"; https://www.takamine.com/wood, attached as "Exhibit 8"; https://www.revolvy.com/main/index.php?s=Nato%20wood&item_type=topic, attached as "Exhibit 9"; https://www.edroman.com/customshop/wood/main.htm, attached as "Exhibit 10"; https://www.gumaha.com/us/en/article/musical-instruments/guitars-basses/795/6493/, attached as "Exhibit 11"; https:

² Registrant respectfully notes that "NATO" has already been determined to be generic for ammunition, and further that it would

14/ruger-mini-14-5-56-nato-wood-stock.cfm?gun_id=100941323, attached as "Exhibit 12"; https://www.alibaba.com/showroom/nato-mahogany.html, attached as "Exhibit 13"; https://jet.com/product/NATO-Wood/c64ec1b8a7cc45c3bc5a430dd7290ce5, attached as "Exhibit 14". See also Exhibits 21, 23, 25).

ii. Further still, the word "nato" can have an ordinary meaning in other languages, such as Italian or Spanish.³

Given such alternate meanings to choose from, the term NATO would NOT be recognized as uniquely **pointing and unmistakably** to the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization.

b. NATO is a Registered Trademark for various other nonrelated applications.

A search of the international trademark registry at http://www.wipo.int/branddb/en/# indicates that the term "NATO" is used in over 100 separate registrations in more that a dozen different countries. See Exhibits 79 and 80. Consequently, unlike in the North American case, it extremely difficult, if not impossible, to make the claim that NATO has a single "identity" with which one can claim an association.

Given that the term NATO already has OTHER commercial meanings to choose from, the term NATO would NOT be recognized as uniquely **pointing and unmistakably** to the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization.

be difficult to conclude that the same term could be considered generic for multiple different non-related classes of goods.

c. Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization is not statutorily capable of being an "institution" with which a false association can be made.

The TMEP §1203.03(a) defines "persons" or "institutions" for purposes of "false connection" or "false association" refusals. These include:

- a firm, corporation, union, association, or other organization capable of suing and being sued in a court of law.
- the United States, any agency or instrumentality thereof, or any individual, firm, or corporation acting for the United States and with the authorization and consent of the United States.
- any State, any instrumentality of a State, and any officer or employee of a State or instrumentality of a State acting in his or her official capacity.

The Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization is not described by any of these definitions. In fact, according to Article XII of the Treaty, the Organization itself has no capability of being sued, and the individual representatives of its members enjoy a very broad immunity from prosecution. *See* Exhibit 77.⁴ More to the point, in Mazzanti v. H.A.F.S.E. and Ministry of Defense, Tribunal of Florence, Italy (January 2, 1954), it was determined that the member States, through actions of the Security Counsel of the United Nations, conclusively determined that the North Atlantic Treaty Organization is not a ju-

³ Meaning, essentially, 'born', with apologies for lack of foreign language fluency.

⁴ "Every person designated by a Member State as its principal permanent representative to the Organization in the territory of another Member State, and such members of his official staff resident in that territory as may be agreed between the State which has designated them and the Organization and between the Organization and the State in which they will be resident, shall enjoy the immunities and privileges accorded to diplomatic representatives and their official staff of comparable rank."

ridical person in the eyes of international law. *See* International Law Reports, Volume 22 (January 1994), pages 758 through 761; *See also* August Reinisch, Cambridge University Press 0521653266 - International Organizations before National Courts, attached as "Exhibit 78."

Further still, assuming, *arguendo*, that the North Atlantic Treaty Organization were capable of functioning as a juridical person, in order to establish that a proposed mark falsely suggests a connection with a person or an institution, it must be shown that:

- (1) the mark is the same as, or a close approximation of, the name or identity of a person or institution;
- (2) the mark would be recognized as such, in that it points uniquely and unmistakably to that person or institution;
- (3) the person or institution named by the mark is not connected with the activities performed by applicant under the mark; and
- (4) the fame or reputation of the person or institution is such that, when the mark is used with the applicant's goods or services, a connection with the person or institution would be presumed.

<u>In re White</u>, 73 USPQ2d 1713 (TTAB 2004); <u>In re Nuclear Research Corp</u>., 16 USPQ2d 1316, 1317 (TTAB 1990); <u>Buffett v. Chi-Chi's, Inc.</u>, 226 USPQ 428, 429 (TTAB 1985); <u>In re Cotter & Co.</u>, 228 USPQ 202, 204 (TTAB 1985).

Thus, because NATO is not an acronym or term that is solely used to identify the North Atlantic Treaty Organization, it cannot be said that the only 'person' which the name possibly identifies is the North Atlantic Treaty Organization and that the mere use of NATO by another appropriates its identity. See <u>University of Notre Dame du Lac v. J.C. Gourmet Food Imports</u>

Co., Inc., 703 F.2d 1372, 1377, 217 USPQ 505, 509 (Fed. Cir. 1983), affg 213 USPQ 594 (TTAB 1982); In re Sauer, 27 USPQ2d 1073 (TTAB 1993), affd, 26 F.3d 140 (Fed. Cir. 1994).

Further, where a name claimed to be appropriated does not point uniquely and unmistakably to that party's personality or 'persona,' there can be no false suggestion. NASA v. Bully Hill Vineyards, Inc., 3 USPQ2d 1671, 1676 (TTAB 1987)

d. Weak Marks Given Less Weight

It has long been held that non-inherently distinctive marks are not given the breath of exclusivity as coined, fanciful, arbitrary, or suggestive word. As such it would be reasonable to conclude that non-inherently distinctive marks are relatively weak marks. Such weak designations may be entitled to a narrow scope of protection. <u>In re Hunke & Jocheim</u>, 220 USPQ 914 (TTAB 1984).

Given such a variety of uses of the term NATO, along with its dictionary meaning in foreign languages, it could not be considered to be coined or distinct. As such, the Applicant respectfully argues that a narrow scope of protection should be allowed in the present case. The
Applicant's mark is capable of coexisting together on the Principal Register and in the marketplace with other registered uses of "NATO" as well as with the "North Atlantic Treaty Organization" and other uses described herein, without any False Connection of Association being
deemed present.

e. Lack of Statutory Exclusivity.

Pursuant to TMEP § 1205.01 there exists a capacity for the statutory prohibition restricting the use of certain words, names, terms, or the like. Congress has created about 70 such stat-

utes that grant exclusive rights to use certain designations to federally created private corporations and organizations. *See*, for example: 18 U.S.C. §§705 (regarding badges, medals, emblems or other insignia of veterans' organizations); 706 ("Red Cross," "Geneva Cross," and emblem of Greek red cross); 707 (4-H Club); 708 (coat of arms of the Swiss Confederation); 711 ("Smokey Bear"); and 711a ("Woodsy Owl" and slogan, "Give a Hoot, Don't Pollute"). Other statutes provide for civil enforcement, e.g., 36 U.S.C. §§ 153104 (National Society of the Daughters of the American Revolution); 30905 (Boy Scouts); 80305 (Girl Scouts); 130506 (Little League); and 21904 (The American National Theater and Academy, See Exhibit 26).

Applicant feels it is important to note that no such statutory prohibition exists with respect to the North Atlantic Treaty Organization, nor the term NATO.

f. Existence of other "Treaty" Acronyms as Trademarks

In addition to the NAFTA related marks issued as listed above, numerous other acronyms that appear to relate to treaties or alliances. Such trademarks were not associated with the treaties or alliances and matured to registered trademarks. This supports the fact that such trademarks are not associated with the treaties or alliances and avoid a conclusion of false association. These include, *inter alia*:

- EPO (European Patent Org.), which such term also has 41 live issued or pending registrations. *See* Exhibit 81;
- EU (European Union), which such term also has 66 live issued or pending registrations. *See* Exhibits 82 and 83;
- CENTO (Central Treaty Org. 1955), which such term also has 33 live issued or pending registrations. See Exhibit 84; and

METO (Middle East Treaty Org. 1955), which such term also is the subject of at least
 12 live issued or pending registrations. See Exhibit 85.

g. Res Judicata, Collateral Estoppel, and Stare Decisis

A prior adjudication against an applicant may be dispositive of a later application for registration of the same mark on the basis of the same facts and issues, under the doctrine of res judicata, collateral estoppel, or stare decisis. Res judicata, or claim preclusion, protects against relitigation of a previously adjudicated claim between the same parties or their privies based on the same cause of action. In re Bose Corp., 476 F.3d 1331, 81 USPQ2d 1748 (Fed. Cir. 2007) (stating that application for registration of speaker design is barred by Federal Circuit's 1985 decision affirming refusal of registration of the same mark for the same goods on the ground that the proposed mark was functional).

The present Applicant has previously registered Registration Number 4795590 for NATO in Class 013 for "Explosives; airsoft rifles and guns not for recreational use, bb guns; pellet guns; magazines for weapons; loading clips for small arms; fireworks; gun cases; bipods for weapons; holsters." During the course of the examination for that registration, the Examining Attorney initially rejected that application over the same grounds, i.e. Section 2(a), false association. However, that Examining Attorney, provided with some, but not all of the Applicant's support materials filed with this Appeal Brief, still properly reversed this initial determination and ultimately issued that application. Applicant contends that the same result is proper here in this Application.

Slight differences in a mark or in an identification of goods or services will not avoid application of these preclusion doctrines. <u>In re Orion Research Inc.</u>, 669 F.2d 689, 205 USPQ 688 (C.C.P.A. 1980); <u>Miller Brewing Co. v. Coy Int'l Corp.</u>, 230 USPQ 675 (TTAB 1986). See also

MasterCard Int'l Inc. v. Am. Express Co., 14 USPQ2d 1551, 1553 (TTAB 1990) (finding that applicant is barred by collateral estoppel from litigating the issue of descriptiveness or genericness of the proposed mark as used on the services that were the subject of the prior proceeding, but may go forward with respect to use of the mark on other services).

Decisions involving prior registrations are not necessarily controlling (see TMEP § 1216.01). However, they are accorded weight unless such limitations are generally resulting from different facts and evidence of record. The controlling issue, that of Section 2(a) false association of NATO with the North Atlantic Treaty Organization, is identical and the materials considered, while not identical, were functionally identical or substantially equivalent to those presented here. The prescient decision in this prior NATO application should be similarly followed.

h. Other similar and analogous organizations that are NOT falsely associated with registrations.

In a recent opposition <u>U.S. Marine Corps v. Peter J. Healy</u>, Opposition No. 91215087 (April 25, 2017, non-precedential), the U.S. Marine Corps were unable to successfully oppose the mark "MARINE ONE DOWN". While a litany of issues were involved, False Suggestion of a Connection under Section 2(a) was considered in the opinion and such a false connection was not found. The Opposer in this case failed to meet the second or fourth prongs of the Section 2(a) test: there was no evidence that applicant's mark "MARINE ONE DOWN" pointed "uniquely and unmistakably" to the Opposer U.S. Marine Corps , and there was no evidence that Opposer's name, U.S. Marine Corp, or its identity is of sufficient fame or reputation that applicant's goods would presumably evoke a connection with Opposer. <u>U.S. Marine Corps v. Peter J. Healy</u>, Opposition No. 91215087 (non-precedential). While that decision is, admittedly, non-precedential, the reasoning for creating an association certainly was more compelling than in the present ap-

plication, yet the U.S. Marine Corps was still unable to oppose the registration of MARINE ONE DOWN

In another precedential decision, the Trademark Trial and Appeal Board (TTAB) dismissed an opposition brought under Section 2(a) of the Trademark Act alleging a false suggestion of a connection between the opponent and the applied-for mark in <u>Boston Athletic Association v. Velocity, LLC</u>, Opposition No. 91202562 (Oct. 26, 2015) [precedential]. The owner of the mark "BOSTON MARATHON" opposed the application under Section 2(a), alleging that the applied-for mark created a false suggestion of an association with the opponent. Although the opponent did not own a registration for "MARATHON MONDAY", it alleged that it had used the name in association with the BOSTON MARATHON race which has been held on the third Monday in April for 117 years. However, the TTAB failed to find a false suggestion of a connection under Section 2(a) due to the absence of evidence showing that "the opposed mark would be recognized as pointing *uniquely and unmistakably* to the opponent" (emphasis added) since nothing in the record proved that consumers associated the applied for mark so closely with the opponent that they recognize it as the opponent's name (or nickname), identity, or persona.

Given that many different names for which NATO is an acronym, as well as to very many national and international registrations including the same (as well as dictionary foreign language meaning in at least 2 different countries), the sheer number of potential options prevent a consumer from being able to immediately recognize any one particular nickname, identity, or persona. Further, and most importantly, the North Atlantic Treaty Organization does not sell, manufacture, offer or sale, or otherwise transmit or distribute any goods whatsoever, and certainly none of the goods listed in the present application. See Declaration of Joseph Verbovszeky.

The equivalent situation exists in a countless number of other instances, including, inter alia:

- CIA, in which there are 58 live issued or pending registrations in the US containing the acronym. *See* Exhibits 86 and 87;
- FBI, in which there are 19 live issued or pending registrations in the US containing the acronym, including one in International Class 014. *See* Exhibit 88;
- Senate, in which there are 23 live issued or pending registrations in the US containing the word. *See* Exhibit 89;
- Parliament, in which there are 50 live issued or pending registrations in the US containing the word. See Exhibit 90;
- ATF, in which there are 30 live issued or pending registrations in the US containing the acronym. See Exhibit 91;
- MOD (Ministry of Defense) in which there are over a thousand live issued or pending registrations in the US containing the acronym, including US Serial Number 87653640. See Exhibit 92;
- Secret Service, in which there are 13 live issued or pending registrations in the US containing the term. See Exhibit 93;
- USAF, in which there are 2 live issued or pending registrations in the US containing the acronym. *See* Exhibit 94;
- Kremlin, in which there are 9 live issued or pending registrations in the US containing the word. See Exhibit 95;
- Foreign Legion, in which there are 4 live issued or pending registrations in the US containing the word. See Exhibit 96;

- Federales (Mexican National Police), in which trademark registrations exist for beer and cigars. See Exhibit 97; and,
- Scotland Yard, in which there are 3 issued registrations in the US containing the term.
 See Exhibit 98.

Numerous other Acronyms that appear to relate to government entities or agencies also exist as registered trademarks, even though not associated with the government entity or agency. Each of these avoids a conclusion of false association. These include, inter alia:

- Fort Knox, in which there are 12 live issued or pending registrations. See Exhibit 99;
- Area 51, in which there are 27 live issued or pending registrations. See Exhibit 100;
- CDC, in which there are 45 live issued or pending registrations. See Exhibit 101;
- FCC, in which there are 22 live issued or pending registrations. See Exhibit 102;
- FTC, in which there are 28 live issued or pending registrations. See Exhibit 103;
- NSA, in which there are 18 live issued or pending registrations. See Exhibit 104;
- DEA, in which there are 48 live issued or pending registrations. See Exhibit 105;
- KGB, in which there are 14 live issued or pending registrations. See Exhibit 106;
- WIPO, in which there are 21 live issued or pending registrations. See Exhibit 107.

All of these many, many examples further indicate that to deny a registration as Falsely Suggesting a Connection under Section 2(a) of the Trademark Act, 15 U.S.C. §1052(a) is improper. This analysis is distinctly different from §2(d), 15 U.S.C. §1052(d), for which the relevant test is likelihood of confusion. <u>In Univ. of Notre Dame du Lac v. J.C. Gourmet Food Imps.</u>

<u>Co.</u>, the Court of Appeals for the Federal Circuit noted the name or designation must be unmis-

takably associated with, and point uniquely to, a certain party's personality or "persona." 703 F.2d 1372, 1375-76, 217 USPQ 505, 508-09 (Fed. Cir. 1983), aff'g 213 USPQ 594 (TTAB 1982). Section 2(a) protection is intended to prevent such unauthorized use of this unmistakable persona of an institution and not to protect the public. In re MC MC S.r.l., 88 USPQ2d 1378, 1380 (TTAB 2008) (quoting Bridgestone/Firestone Research Inc. v. Auto. Club De L'Quest De La France, 245 F.3d 1359, 58 USPQ2d 1460 (Fed. Cir. 2001)).

Thus, the fourth prong of the <u>Pedersen</u> analysis, namely that "[t]he fame or reputation of the named person or institution is of such a nature that a connection with such person or institution would be presumed when applicant's mark is used on its goods and/or services", has not been satisfied because the wide ranging and popular uses of the acronym "NATO," in various different fields, sufficiently "dilutes" the acronym of "NATO" with respect to the North Atlantic Treaty Organization in the mind of the likely consumer base such that likely consumers (and the public at large) would not make a connection between the North Atlantic Treaty Organization and the Applicant's listed goods.

5 Conclusion.

To establish that an applied-for mark falsely suggests a connection with a person or an institution, the person or institution must be

As an initial prerequisite, Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization is not a juridic entity to which false association can attach *by law*.

Further, to establish that an applied-for mark falsely suggests a connection with a person or an institution, the following is required:

- (1) The mark sought to be registered is the same as, or a close approximation of, the name or identity previously used by another person or institution;
- (2) The mark would be recognized as such, in that it points uniquely and unmistakably to that person or institution;
- (3) The person or institution identified in the mark is not connected with the goods sold or services performed by applicant under the mark; and
- (4) The fame or reputation of the named person or institution is of such a nature that a connection with such person or institution would be presumed when applicant's mark is used on its goods and/or services.

The applicant admits the third prong, i.e. that it is not connected with Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization in connection with the sale of its goods.

Further, the facts and law presented herein *overwhelmingly indicates* that the other three prongs are NOT met.

(1) The NATO mark sought to be registered does not have the same commercial impression as the Organisation du Traité de l'Atlantique Nord (OTAN) aka North Atlantic Treaty Organization. Organisation du Traité de l'Atlantique Nord has no commercial impression at all in that it is not in commerce and sells no products or services. Organisation du Traité de l'Atlantique Nord does not sell, manufacture, offer for sale, or otherwise transmit or distribute any goods whatsoever, including those listed in the present application, See, *inter alia*, Declaration of Joseph Verbovszky. The acronym NATO has a large number of other meanings and is not inherently distinctive with Organisation du Traité de l'Atlantique Nord. Further, the term "nato" has

ordinary meaning in other languages, and further still the term NATO is a Registered Trademark on hundreds of registrations in this and in other countries. As such, the term is necessarily a "weak" mark incapable of being immediately and unmistakably associated with any specific institution.

(2) The NATO mark sought to be does not uniquely and unmistakably point to the North American Treaty Organization. The acronym NATO has a large number of other meanings and is not inherently distinctive with Organisation du Traité de l'Atlantique Nord. Further, the term "nato" has ordinary meaning in other languages, and further still the term NATO is a Registered Trademark on hundreds of registrations in this and in other countries. As such, the term is necessarily a "weak" mark incapable of being immediately and unmistakably associated with any specific institution.

And,

(3) The fame or reputation of the North American Treaty is not and cannot be presumed when the mark NATO is used on its goods and/or services of this application. The acronym NATO has a large number of other meanings and is not inherently distinctive with Organisation du Traité de l'Atlantique Nord. Further, the term "nato" has ordinary meaning in other languages, and further still the term NATO is a Registered Trademark on hundreds of registrations in this and in other countries. As such, the term is necessarily a "weak" mark incapable of being immediately and unmistakably associated with any specific institution.

While the Applicant admits that it is not connected with the North American Treaty Organization in connection with the sale of its goods, given the overwhelming legal and factual ev-

idence and precedent cited above, it is incorrect to make a determination that the present trademark for NATO for the goods listed in the present Application.

Due to this overwhelming evidence that the present application does not cause a false association, the Applicant respectfully requests that the Board of Trademark Appeals reverse the Examining Attorney's final Rejection and allow this application for registration.

5.56×**45**mm NATO

The **5.56×45mm NATO** (official <u>NATO</u> nomenclature **5.56 NATO**) is a <u>rimless</u> bottlenecked <u>intermediate cartridge</u> family developed in Belgium by <u>FN Herstal</u>. [4] It consists of the SS109, SS110, and SS111 cartridges. Under <u>STANAG</u> 4172, it is a standard cartridge for NATO forces as well as many non-NATO countries. [5] It is derived from, but is not identical to, the <u>.223</u> Remington cartridge.

History

The 7.62×51mm NATO and 5.56×45mm NATO cartridges compared to a AA battery.

In 1954, the 7.62×51 mm NATO rifle cartridge ^[6] was selected as the first standard NATO rifle cartridge. At the time of selection

there had been criticism that the recoil power of the 7.62×51mm NATO, when fired from a hand-held lightweight modern service rifle, did not allow a sufficient automatic rate of fire for modern combat.^[7]

The British had extensive evidence with their own experimentation with intermediate cartridges since 1945 and were on the point of adopting a .280 inch (7 mm) cartridge when the selection of the 7.62×51mm NATO was made. The FN company had also been involved in the development of the .280 round, including developing a version of the FN FAL in .280.^[8] The concerns about recoil and effectiveness were effectively overruled by the US within NATO, and the other NATO nations accepted that standardization was more important at the time than selection of the ideal cartridge.^[4]

Rim thickness	1.14 mm (0.045 in)
Case length	44.70 mm (1.760 in)
Overall length	57.40 mm (2.260 in)
Case capacity	1.85 cm ³ (28.5 gr H ₂ O)
Rifling twist	178 mm or 229 mm (1 in 7 in)
Primer type	Small rifle
Maximum pressure (EPVAT)	430.00 MPa (62,366 psi)
Maximum pressure (SCATP 5.56)	380.00 MPa (55,114 psi)

Ballistic performance

SAAMI, C.I.P.[1][2][3]

The development of the cartridge that eventually became the .223 Remington (from which 5.56mm NATO would eventually be developed) would be intrinsically linked to the development of a new lightweight combat rifle. The cartridge and rifle were developed as one unit by Fairchild Industries, Remington Arms, and several engineers working toward a goal developed by U.S. Continental Army Command (CONARC). Early development work began in 1957. A project to create a small-calibre, high-velocity (SCHV) firearm was created. Eugene Stoner of Armalite was invited to scale down the AR-10 (7.62mm) design. Winchester was also invited to participate. [9][4] The parameters that were requested by CONARC were:

- .22 Caliber
- Bullet exceeding supersonic speed at 500 yards^{[9][4]}
- Rifle weight of 6 lb
- Magazine capacity of 20 rounds
- Select fire for both semi-automatic and fully automatic use
- Penetration of US steel helmet through one side at 500 yards
- Penetration of .135-inch steel plate at 500 yards
- Accuracy and ballistics equal to M2 ball ammunition (.30-06 Garand)
- Wounding ability equal to M1 Carbine [4]

Service rifle cartridge cases: (Left to right) 7.62×54mmR, 7.62×51mm NATO, 7.62×39mm, 5.56×45mm NATO, 5.45×39mm.

<u>Springfield Armory</u>'s <u>Earle Harvey</u> lengthened the <u>.222 Remington</u> cartridge case to meet the requirements. It was then known as the .224 Springfield. Concurrently with the SCHV project, Springfield Armory was developing a 7.62mm rifle. Harvey was ordered to cease all work on the SCHV to avoid any competition of resources.

Eugene Stoner of Armalite (a division of Fairchild Industries) had been advised to produce a scaled-down version of the 7.62mm AR-10 design. In May 1957 Stoner gave a live-fire demonstration of the prototype of the AR-15 for General Willard Wyman, Commander-in-Chief of CONARC. As a result, CONARC ordered rifles to test. Stoner and Sierra Bullet's Frank Snow began work on the .222 Remington cartridge. Using a ballistic calculator, they determined that a 55-grain bullet would have to be fired at 3300 fps to achieve the 500-yard performance necessary. [4]

Robert Hutton (technical editor of *Guns & Ammo* magazine) started development of a powder load to reach the 3300 fps goal. He used DuPont IMR4198, IMR3031, and an Olin Powder to work up loads. Testing was done with a Remington 722 rifle with a 22-inch Apex barrel. During a public demonstration the round successfully penetrated the U.S. steel helmet as required. But testing showed chamber pressures to be excessively high.^{[9][4]}

Stoner contacted both Winchester and Remington about increasing the case capacity. Remington created a larger cartridge called the .222 Special, which was loaded with DuPont IMR4475 powder.^[4]

During parallel testing of the T44E4 (future M14) and the AR-15 in 1958, the T44E4 experienced 16 failures per 1000 rounds fired compared to 6.1 for the AR-15. [4]

Due to several different .222 caliber cartridges being developed for the SCHV project, the 222 Special was renamed .223 Remington in 1959. In May of that year, a report was produced stating that 5 to 7-man squads armed with AR-15 rifles had a higher hit probability than 11-man squads armed with M-14 rifles. At a 4th of July picnic, Air Force General Curtis LeMay fired the AR-15 and was very impressed with it. He ordered a number of them to replace M2 carbines that were in use by the Air Force. By November, testing at Aberdeen Proving Ground showed that the AR-15 failure rate had declined to 2.5 failures per 1000 rounds, resulting in the AR-15 being approved for Air Force Trials. [4]

1961 witnessed marksmanship testing comparing the AR-15 to the M-14. 43% of AR-15 shooters achieved Expert while only 22% of M-14 shooters did. General LeMay subsequently ordered 80,000 rifles.^[4]

In the spring of 1962, Remington submitted the specifications of the .223 Remington to the Sporting Arms and Ammunition Manufacturers' Institute (SAAMI). In July, operational testing ended with a recommendation for adoption of the AR-15 rifle chambered in .223 Remington.^[4]

In September 1963, the .223 Remington cartridge is officially accepted and named "Cartridge, 5.56mm Ball, M193." The specification includes a Remington-designed bullet and the use of IMR4475 Powder which resulted in a muzzle velocity of 3250 feet per second and a chamber pressure of 52,000 psi. [4]

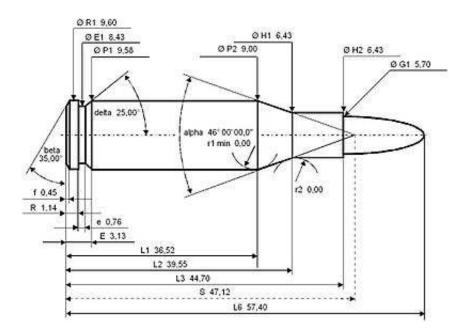

In 1977, NATO members signed an agreement to select a second, smaller caliber cartridge to replace the 7.62×51mm NATO cartridge. [10] Of the cartridges tendered, the .223 Remington (M193) was the basis for a new design created by FN Herstal. The FN-created cartridge was named 5.56×45mm NATO with a military designation of SS109 in NATO and M855 in the U.S. [11] These new SS109 ball cartridges required a 228 mm (1-in-9") twist rate while adequately stabilizing the longer L110 tracer projectile required an even faster 178 mm (1-in-7") twist rate. [4]

The Belgian 62 gr SS109 round was chosen for standardization as the second NATO standard rifle cartridge which led to the 1980 STANAG 4172. The SS109 used a 62 gr full metal jacket bullet with a seven grain steel core for better penetration against lightly armored targets, specifically to meet a requirement that the bullet be able to penetrate through one side of a WWII U.S. M1 helmet at 800 meters (which was also the requirement for the 7.62mm). It had a slightly lower muzzle velocity but better long-range performance due to higher sectional density and a superior drag coefficient. This requirement made the SS109 (M855) round less capable of fragmentation than the M193 and was considered more humane. [12]

The .223 Remington cartridge inspired an international tendency toward relatively small-sized, lightweight, high-velocity military service cartridges that allow a soldier to carry more ammunition for the same weight compared to their larger and heavier predecessor cartridges, have favourable maximum point-blank range or "battle zero" characteristics, and produce relatively low bolt thrust and free recoil impulse, favouring lightweight arms design and automatic fire accuracy. [8][13][14] Similar intermediate cartridges were developed and adopted by the Soviet Union in 1974 (5.45×39mm)^[15] and by the People's Republic of China in 1987 (5.8×42mm).

Cartridge dimensions

The 5.56×45mm NATO has 1.85 ml (28.5 grains H₂O) cartridge case capacity.

5.56×45mm NATO maximum NATO cartridge dimensions. All sizes in millimeters (mm).[16][17]

According to the official NATO proofing guidelines the 5.56×45mm NATO case can handle up to 430.0 MPa (62,366 psi) piezo service pressure. In NATO regulated organizations every rifle cartridge combo has to be <u>proofed</u> at 125% of this maximum pressure 537.5 MPa (77,958 psi) to certify for service issue.

The US <u>SAAMI</u> lists Maximum Average Pressure (MAP) for the .223 Remington cartridge as 55,000 psi (379.2 MPa) piezo pressure with deviation of up to 58,000 psi (399.9 MPa). The chambering for military 5.56×45mm NATO has a longer throat prior to the bullet contacting the rifling which results in lower pressures when firing 5.56×45mm NATO ammunition. If 5.56×45mm NATO is used in rifles chambered for .223 Remington the bullet will be engraving the rifling when chambered which can dramatically increase pressure past the proof test level. [11]

The <u>C.I.P.</u> rulings for the C.I.P. civilian .223 Remington chambering are much closer to the military 5.56×45mm NATO chambering.^[20]

Rifle barrel configurations

When 5.56×45mm NATO was adopted as standard in 1980, NATO chose a 178 mm (1-in-7") rifling twist rate for the 5.56×45mm NATO chambering to adequately stabilize the relatively long NATO L110/M856 5.56×45mm NATO tracer projectile. [4][21] The US at that time converted all rifles in inventory by replacing the barrels and all new US military rifles since have been manufactured with this ratio. [22]

In the US builders of AR type rifles can specify barrels with either .223 Remington, .223 Wylde, 223 Noveske, or 5.56×45mm NATO chambers in lengths from pistol (7.5") to long rifle (24"). These barrels are also available with rifling ranging from 356 mm (1-in-14") to 178 mm (1-in-7"). US makers are moving toward 5.56×45mm NATO and 178 mm (1-in-7"), which will ensure the least liability. Bolt action rifles have few options in this regard. Those chambered for .223 Remington may not have a fast enough rifling to stabilize the longer 5.56×45mm NATO bullets which range up to 77 gr. Some hunting loads of .223 Remington go to 90 grains. [22][24]

Performance

The 5.56×45mm NATO SS109/M855 cartridge (NATO: SS109; U.S.: M855) with standard 62 gr. lead core bullets with steel penetrator will penetrate approximately 38 to 51 cm (15 to 20 in) into soft tissue in ideal circumstances. As with all spitzer shaped projectiles it is prone to yaw in soft tissue. However, at impact velocities above roughly 762 m/s (2,500 ft/s), it may yaw and then fragment at the cannelure (the crimping groove around the cylinder of the bullet).^[25] These fragments can disperse through flesh and bone, inflicting additional internal injuries.^[26]

Fragmentation, if and when it occurs, imparts much greater damage to human tissue than bullet dimensions and velocities would suggest. This fragmentation effect is highly dependent on velocity, and therefore barrel length: short-barreled carbines generate less muzzle velocity and therefore lose wounding effectiveness at much shorter ranges than longer-barreled rifles.[27]

Proponents of the hydrostatic shock theory contend that the shockwave from a high-velocity bullet results in wounding effects beyond the tissue directly crushed and torn by the bullet and fragments.^{[28][29][30]} However, others argue that tissue damage from hydrostatic shock is a myth. Critics argue that sonic pressure waves do not cause tissue disruption and that temporary cavity formation is the actual cause of tissue disruption mistakenly attributed to sonic pressure waves.^[31]

other cartridges

STANAG magazine.

SS109/M855 NATO ball can penetrate up to 3 mm (0.12 in) of steel at 600 meters.^[32] According to Nammo, a Finnish-Norwegian ammunition

producer, the 5.56×45mm NATO M995 armour piercing cartridge can penetrate up to 12 mm (0.47 in) of RHA steel at 100 meters.[33]

The US Army's Ballistic Research Laboratory measured a ballistic coefficient (G7 BC) of 0.151 and form factor (G7 i) of 1.172 for the SS109/M855 ball projectile.^[34]

The Swedish military has measured the bullet velocities of SS109/M855 military cartridges at 4 m (13.1 ft) from the muzzle fired from differing barrel lengths: [35] {dead link}

5.56×45mm NATO cartridges in a

Barrel length	SS109/M855 V ₄ bullet velocity	V ₄ velocity loss
210 mm (8.3 in)	723 m/s (2,372 ft/s)	41 m/s (135 ft/s)
240 mm (9.4 in)	764 m/s (2,507 ft/s)	32 m/s (105 ft/s)
270 mm (10.6 in)	796 m/s (2,612 ft/s)	29 m/s (95 ft/s)
300 mm (11.8 in)	825 m/s (2,707 ft/s)	18 m/s (59 ft/s)
330 mm (13.0 in)	843 m/s (2,766 ft/s)	23 m/s (75 ft/s)
360 mm (14.2 in)	866 m/s (2,841 ft/s)	12 m/s (39 ft/s)
390 mm (15.4 in)	878 m/s (2,881 ft/s)	14 m/s (46 ft/s)

450 mm (17.7 in)	906 m/s (2,972 ft/s)	9 m/s (30 ft/s)
480 mm (18.9 in)	915 m/s (3,002 ft/s)	7 m/s (23 ft/s)
508 mm (20.0 in)	922 m/s (3,025 ft/s)	-

Criticism

There has been much debate of the allegedly poor performance of the bullet on target in regards to stopping power, lethality, and range. Some of this criticism has been used to advocate an intermediate-sized cartridge between the 5.56 and 7.62 NATO sizes^[36] while criticisms of lead contamination, poor barrier penetration, and accuracy have been used to support the M855A1 EPR round.^[37] Arguably, the criticisms about range, accuracy and lethality are related to the change in barrel length and twist between the M16 and M4. The earlier 5.56 rounds (M855/SS109 and the original M193) were optimized for a 20-inch (51 cm) barrel with a 1:12 twist. The shorter 14.5-inch (37 cm) barrel of the M4 carbine (with a 1:7 twist) generates lower muzzle velocity, reducing the likelihood that the bullet will upset (yaw, fragment, or expand) in the target and resulting in less significant wounds.

Combat operations the past few months have again highlighted terminal performance deficiencies with 5.56×45mm 62 gr. M855 FMJ. These problems have primarily been manifested as inadequate incapacitation of enemy forces despite them being hit multiple times by M855 bullets. These failures appear to be associated with the bullets exiting the body of the enemy soldier without yawing and fragmenting. This fragmentation does not occur because the design conforms to international peace treaties such as the Hague convention, which outlaws the use of ammunition that is designed to expand in the body. The ammunition is designed to "yaw" meaning it moves side to side on impact, causing more damage, but it does not always do so, such as when it is fired from a shorter barrel. With normal ammunition with soft lead, hollow, or ballistic tips there will be significant expansion of the bullet on impact that significantly improves its wounding capacity. Some bullets can expand as much as twice their size, but the M855 ball ammunition will only expand a few hundredths of an inch; not enough to effect its performance. This lack

of expansion does however help with penetration of light cover such as walls, since the round does not expand it does not experience as much drag and can pass through more wood, thin metal, and other objects than most civilian ammo would be likely to do.

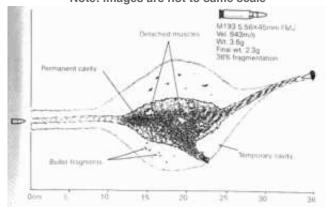

Although all SS109/M855 types must be 62 gr. FMJ bullets constructed with a steel penetrator in the nose, the composition, thickness, and relative weights of the jackets, penetrators, and cores are quite variable, as are the types and position of the cannelures. Because of the significant differences in construction between bullets within the SS109/M855 category, terminal performance is quite variable – with differences noted in yaw, fragmentation, and penetration depths. Luke Haag's papers in the AFTE Journal (33(1):11–28, Winter 2001) also describes this problem.

__[38]

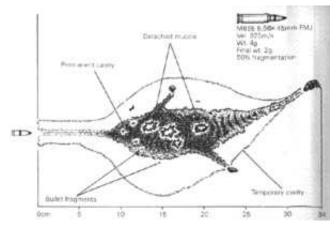

If 5.56 mm bullets fail to upset (yaw, fragment, or deform) within tissue, the results are less significant wounds that may not cause adequate blood loss or damage to immediately stop the target's attack or advances. This is true for all 5.56×45mm bullets, including both military FMJ and OTM (open tip match) and civilian JHP/JSP designs used in law enforcement. As expected, with decreased wounding effects, rapid incapacitation is unlikely: enemy soldiers may continue to pose a threat to friendly forces and violent suspects can remain a danger to law enforcement personnel and the public.

This failure of 5.56×45mm NATO bullets to yaw can be caused by reduced impact velocities as when fired from short-barreled weapons or when the range to the target increases. Failure to yaw and fragment can also occur when the bullets pass through only minimal tissue, such as a limb or the chest of a thin, small statured individual, as the bullet may exit the body before it has a chance to yaw and fragment. Two other yaw issues: Angle-of-Attack (AOA) variations between different projectiles, even within the same lot of ammo, as well as Fleet Yaw variations between different rifles, elucidated in 2006 by the Joint Service Wound

Wound profiles in ballistic gelatin Note: images are not to same scale

M16 M193 5.56×45mm

M16A2 SS109/M855 5.56×45mm NATO

Ballistic Integrated Product Team (JSWB-IPT), which included experts from the military law enforcement user community, trauma surgeons, aero ballisticians, weapon and munitions engineers, and other scientific specialists. These yaw issues were most noticeable at close ranges and were more prevalent with certain calibers and bullet styles—the most susceptible being 5.56×45mm NATO FMJ ammunition like SS109/M855 and M193.

- Dr. Martin Fackler^[39]

The 5.56×45mm NATO standard SS109/M855 cartridge was designed for maximum performance when fired from a 508 mm (20.0 in) long barrel, as was the original 5.56 mm M193 cartridge. Experiments with longer length barrels up to 610 mm (24.0 in) resulted in no improvement or a decrease in muzzle velocities for the SS109/M855 cartridge. Shorter barrels produce a greater flash and noise signature, and the addition of a suppressor to a short barreled AR family rifle can make it unreliable, as the reduced time for the propellant to burn in the barrel and higher muzzle pressure levels at the suppressor entrance can cause faster cycling and feeding issues. Unless the gas port can be regulated or adjusted for higher pressures, suppressors for short barreled 5.56×45mm NATO firearms must be larger and heavier than models for standard length rifles to function reliably. SS109/M855 cartridges fired from barrels under about 254 mm (10.0 in) in length do not have enough muzzle velocity energy to cause extreme damage that occurs only at terminal velocities of over 750 m/s (2,500 ft/s) on impact, reducing the wounding capacity. [40][41]

Compared to larger calibers, proponents of the 5.56×45mm NATO round contend that animal studies of the wounding effects of the 5.56×45mm NATO round versus the 7.62×39mm have found that the 5.56×45mm NATO round is more damaging, due to the post-impact behavior of the 5.56 mm projectile resulting in greater cavitation of soft tissues. [42] The US Army contended in 2003 that the lack of close range lethality of the 5.56×45mm NATO was more a matter of perception than fact. With controlled pairs and good shot placement to the head and chest, the target was usually defeated without issue. The majority of failures were the result of hitting the target in non-vital areas such as extremities. However, a minority of failures occurred in spite of multiple hits to the chest. [43]

Some have contended that shot placement is the most important parameter in determining the lethality of a bullet. Difficulty with the 5.56×45mm NATO at long ranges has been attributed to training ^[44]; Swedish <u>ISAF</u> units relied on <u>.50</u> <u>BMG</u> heavy machine guns for long-range shooting due to resilience to factors such as range and wind drift. Underperformance is thus attributed to errors in range and wind estimation, target lead, firing position, and stress under fire, factors that can be resolved through training. ^{[35][45]}

Improvements

Advances have been made in 5.56 mm ammunition. The U.S. military had adopted for limited issue a 77-grain (5.0 g) "Match" bullet, type classified as the Mk 262. The heavy, lightly constructed bullet fragments more violently at short range and also has a longer fragmentation range. [46] Originally designed for use in the Mk 12 SPR, the ammunition has found favor with special forces [47] units who were seeking a more effective cartridge to fire from their M4A1 carbines. Commercially available loadings using these heavier (and longer) bullets can be prohibitively expensive and cost much more than military surplus ammunition. Additionally, these heavy-for-caliber loadings sacrifice some penetrative ability compared to the M855 round (which has a steel penetrator tip). Performance of 5.56×45mm military ammunition can generally be categorized as almost entirely dependent upon velocity in order to wound effectively. Heavy OTM bullets enhance soft tissue wounding ability at the expense of hard-target/barrier penetration.

<u>U.S. Special Forces</u> had sought to create a round that had increased power out of carbine M4 barrels and compact <u>SCAR-L</u> barrels, while increasing hard target performance. Developmental efforts led to the creation of the Mk318. The bullet uses an open-tip design to inflict damage on soft tissue, and has a brass rear to penetrate hard targets. The tip and lead core fragments consistently even when using short barrels, while the rear moves through once the front impacts. It has more consistent performance because it is not yaw-dependent like the M855; the nose fragments upon impact and solid rear penetrator continues to move relatively straight. This makes the Mk318 effective against personnel with or without body armor. The round also increases accuracy, from 3–5 <u>minute of angle</u> (MOA) with the M855 from an M4A1 barrel to 1.71 MOA at 300 yards and 1.67 MOA at 600 yards from a 14 in (360 mm) SCAR-L barrel. [49]

For general issue, the U.S. Army adopted the M855A1 round in 2010 to replace the M855. The primary reason was pressure to use non-lead bullets. The lead slug is replaced by a copper alloy slug in a reverse-drawn jacket, with a hardened steel penetrator extending beyond the jacket, reducing lead contamination to the environment. The M855A1 offers several improvements other than being lead-free. It is slightly more accurate, has better consistency of effect in regards to wounding ability, and has an increased penetrating capability. The round can better penetrate steel, brick, concrete, and masonry walls, as well as body armor and sheet metal. It penetrates $\frac{3}{8}$ in (9.5 mm) of mild steel at 350 meters, which the M855 can only do at 160 meters. The propellant burns faster, which decreases the muzzle flash and gives a higher muzzle velocity, an important feature when fired from a short barreled M4 carbine. Though the M855A1 is more expensive to produce, its performance is considered to compensate. One possible danger is that it generates much greater pressure in the chamber when fired, decreasing service life of parts and increasing the risk of catastrophic failure of the weapon (though this has yet to occur). [50][51]

The <u>U.S. Marines</u> adopted the Mk318 in early 2010 due to delays with the M855A1. This was a temporary measure until the M855A1 was available for them, which occurred in mid-2010 when the Army began to receive the rounds. Both the Mk318 and M855A1 weigh the same and have similar performance, and both have better performance than the M855 against all targets. SOCOM spent less money developing the Mk318 and it is marginally better than the M855A1 in some situations, but costs more per round. The Army spent more developing the M855A1 which performs as well or nearly as well as the Mk318, but is cheaper per round and has the advantage of being lead-free. While SOCOM constantly looks for better equipment, the Army and Marines have far more troops to supply and buy more ammunition than SOCOM. [52]

Alternatives

If the 5.56 mm bullet is moving too slowly to reliably yaw, expand, or fragment on impact, the wound size and potential to incapacitate a person is greatly reduced. There have been numerous attempts to create an intermediate cartridge that addresses the complaints of 5.56 NATO's lack of stopping power along with lack of controllability seen in rifles firing 7.62 NATO in full auto. Some alternative cartridges like the .270 caliber 6.8mm Remington SPC (6.8×43mm) focused on superior short-range performance by sacrificing long-distance performance due to the relatively short engagement distances typically observed in urban warfare. Others, like the 6.5mm Grendel (6.5×39mm), are attempts at engineering an all purpose cartridge that could replace both the 5.56 and 7.62 NATO rounds. The 300 AAC Blackout (7.62×35mm) round was designed to have the power of the 7.62×39mm for use in an M4 using standard M4 magazines, and to easily interchange between subsonic ammunition for suppressed firing and supersonic rounds. All these cartridges have certain advantages over the 5.56×45mm NATO, but they have their own individual tradeoffs to include lower muzzle velocity and less range. Additionally, when using a round not based on the case of the 5.56 there can be decreased magazine capacity, and different internal parts. None of these cartridges have gained any significant traction beyond sport shooting communities.

By late 2004, the 6.8mm Remington SPC was in limited use with U.S. Special Operators.^[53] However, it was not adopted for widespread use due to resistance from officials on changing calibers.^[54] In 2007, both the <u>U.S. SOCOM</u> and the <u>U.S. Marine Corps</u> decided not to field weapons chambered in 6.8×43mm due to logistical and cost issues.^[55] An unnamed LWRC representative said in January 2014 that the US military is once again taking a look at the 6.8 SPCII after all the commercial development in the last 10 years.^[56]

5.56mm NATO versus .223 Remington

The exterior dimensions of the 5.56mm NATO and .223 Remington cartridges are identical.^{[11][57]} While the cartridges are identical other than powder load, the chamber leade, i.e. the area where the rifling begins, is cut to a sharper angle on some .223 commercial chambers. Because of this, a cartridge loaded to generate 5.56mm pressures in a 5.56mm chamber may develop pressures that exceed SAAMI limits when fired from a short-leade .223 Remington chamber.

Brass case

The dimensional specifications of 5.56 NATO and .223 commercial brass cases are identical. The cases tend to have similar case capacity when measured, with variations chiefly due to brand, not 5.56 vs .223 designation. The result of this is that there is no such thing as "5.56 brass" or ".223 brass", the differences in the cartridges lie in pressure ratings and in chamber leade length, not in the shape or thickness of the brass.^{[58][59]}

In July 2012, the Army solicited a request for vendors to supply alternative cartridge cases to reduce the weight of an M855A1 5.56 mm round by at least 10 percent, as well as for the 7.62 NATO and .50 BMG rounds. The cartridge cases must maintain all performance requirements when fully assembled, be able to be used by the Lake City Army Ammunition Plant, must be manufactured in quantities totaling approximately 45 million per year. Polymer-cased ammunition is expected as a likely lightweight case technology. A hybrid polymer/metal version of a conventional cartridge case would be thicker than regular cases and reduce the amount of space for the propellant, although certain polymers could be thermodynamically more efficient and not lose energy to the case or chamber when fired. [62]

Pressure

<u>C.I.P.</u> defines the maximum service and proof test pressures of the .223 Remington cartridge equal to the 5.56mm NATO, at 430 MPa (62,366 psi). This differs from the <u>SAAMI</u> maximum pressure specification for .223 Remington of 380 MPa (55,114 psi), due to CIP test protocols measuring pressure using a drilled case, rather than an intact case with a conformal piston, along with other differences. NATO uses <u>NATO EPVAT</u> pressure test protocols for their small arms ammunition specifications.

Because of these differences in methodology, the CIP pressure of 430 MPa (62,366 psi) is the same as a SAAMI pressure of 380 MPa (55,114 psi), which is reflected in US Military specifications for 5.56mm NATO, which call for a mean maximum pressure of 55,000 PSI (when measured using a protocol similar to SAAMI).^[64]

These pressures are generated and measured using a chamber cut to 5.56 NATO specifications, including the longer leade. Firing 5.56mm NATO from a chamber with a shorter .223 Remington leade can generate pressures in excess of SAAMI maximums.

Chamber

The 5.56mm NATO chambering, known as a NATO or mil-spec chamber, has a longer leade, which is the distance between the mouth of the cartridge and the point at which the rifling engages the bullet. The .223 Remington chambering, known as SAAMI chamber, is allowed to have a shorter leade, and is only required to be proof tested to the lower SAAMI chamber pressure. To address these issues, various proprietary chambers exist, such as the Wylde chamber (Rock River Arms)^[65] or the ArmaLite chamber, which are designed to handle both 5.56×45mm NATO and .223 Remington equally well. The leade of the .223 Remington minimum C.I.P. chamber also differs from the 5.56mm NATO chamber specification. The casings and chambers .223 Remington and 5.56×45mm NATO are virtually the same dimensions, but due to the fact that .223 Remington is designed to handle much lower pressures than the 5.56×45mm NATO the rounds are not completely interchangeable. Firing a 5.56×45mm NATO round out of a rifle chambered in .223 Remington could be injurious or fatal to the user as well as the gun, however .223 Remington ammunition can be fired safely from almost any rifle chambered in 5.56×45mm NATO as the NATO specified rifles can handle much more chamber pressures than the .223 Remington is capable of producing.

Using commercial .223 Remington cartridges in a 5.56mm NATO chambered rifle should work reliably, but until recently, it was believed this was less accurate than when fired from a .223 Remington chambered gun due to the longer leade. Although that may have been true in the early 1960s when the two rounds were developed, recent testing has shown that with today's ammunition, rifles chambered in 5.56×45mm NATO can also fire .223 ammunition every bit as accurately as rifles chambered in .223 Remington, and the 5.56×45mm NATO chamber has the additional advantage of being able to safely fire both calibers. Using 5.56×45mm NATO mil-spec cartridges (such as the M855) in a .223 Remington chambered rifle can lead to excessive wear and stress on the rifle and even be unsafe, and SAAMI recommends against the practice. Some commercial rifles marked as ".223 Remington" are in fact suited for 5.56×45mm NATO, such as many commercial AR-15 variants and the Ruger Mini-14 (marked ".223 cal", except the Mini-14 "Target" model, which

only fires .223), but the manufacturer should always be consulted to verify that this is acceptable before attempting it, and signs of excessive pressure (such as flattening or gas staining of the primers) should be looked for in the initial testing with $5.56 \times 45 \text{mm}$ NATO ammunition.^[70]

The upper receiver (to which the barrel with its chamber are attached) and the lower receiver are entirely separate parts in AR-15 style rifles. If the lower receiver has either .223 or 5.56 stamped on it, it does not guarantee the upper assembly is rated for the same caliber, because the upper and the lower receiver in the same rifle can, and frequently do, come from different manufacturers – particularly with rifles sold to civilians or second-hand rifles that have been repaired with spare parts. Since all parts are interchangeable, a shooter MUST take great caution to check for markings of 5.56×45mm on the barrel before attempting to fire 5.56×45mm NATO ammunition out of it.

In more practical terms, as of 2010 most AR-15 parts suppliers engineer their complete upper assemblies (not to be confused with stripped uppers where the barrel is not included) to support both calibers in order to satisfy market demand and prevent any potential problems.

Ammunition capacity for weight comparison

The <u>Vietnam War</u> showed the <u>M14 rifle</u> and its 7.62×51mm NATO ammunition had a few disadvantages. The rifle's overall length was not well suited for jungle warfare. Also, the weight of 7.62×51mm NATO cartridges limited the total amount of ammunition that could be carried in comparison with the <u>7.62×39mm</u> cartridge of the <u>Type 56</u> and <u>AK-47</u> rifles, which the <u>Vietcong</u> and <u>North Vietnamese Army</u> (NVA) soldiers were equipped with. In addition, the originally issued wooden stocked versions of the M14 were susceptible to warping from moisture in tropical environments, producing "wandering zeroes" and other accuracy problems, which caused the adoption of fiberglass stocks. Tests showed the .223 Remington cartridge fired from the AR-15 allowed an 8-soldier unit to outgun an 11-soldier unit armed with M14s at ranges closer than 300 meters. U.S. troops were able to carry more than twice as much .223 Remington ammunition as 7.62×51mm NATO for the same weight, which allowed them an advantage against a typical NVA unit armed with Type 56-1s. The .223 Remington cartridge, along with the M16 rifle, were initially adopted in 1962 by U.S. infantry forces as interim solutions to address the weight and control issues experienced with the 7.62×51mm round and M14 rifle. [8][4]

Here is a table comparing rifles based on a maximum ammunition load in box magazines of 10 kg (22 lb).

Rifle	Cartridge	Cartridge weight	Weight of loaded magazine	Max. 10 kilogram ammo. load
M14 (1959)	7.62×51mm NATO	393 gr (25.5 g)	20 rd mag @ 750 g (1.65 lb)	13 mags @ 9.75 kg (21.5 lb) for 280 rds ^[71]
M16 (1962)	.223 Remington	183 gr (11.9 g)	20 rd mag @ 320 g (0.71 lb)	31 mags @ 9.92 kg (21.9 lb) for 620 rds ^[71]
M16A2 (1972)	5.56×45mm NATO	190 gr (12.3g)	30 rd mag @ 490 g (1.08 lb)	20 mags @ 9.80 kg (21.6 lb) for 600 rds ^[71]
AK-47 (1949)	7.62×39mm	252 gr (16.3 g)	30 rd mag @ 819 g (1.806 lb) ^{[72][73]}	12 mags @ 9.83 kg (21.7 lb) for 360 rds ^[71]
AK-74 (1974)	5.45×39mm	162 gr (10.5 g)	30 rd mag @ 545 g (1.202 lb) ^{[73][74]}	18 mags @ 9.81 kg (21.6 lb) for 540 rds ^[71]

5.56mm NATO versus 7.62mm NATO

Comparison of 7.62mm NATO, 5.56mm NATO and 9mm Parabellum.

Cartridge	Model	Cartridge size	Cartridge weight	Bullet weight	Velocity	Energy
5.56mm NATO	M855 ^[75]	5.56×45mm	12.31 g (190 gr)	4.02 g (62 gr)	922 m/s (3,025 ft/s) ^[75]	1,709 J ^[76]
7.62mm NATO	M80 ^[77]	7.62×51mm	25.40 g (392 gr)	9.33 g (144 gr)	838 m/s (2,749 ft/s) ^[77]	3,275 J

Hit probability refers to the ability of a soldier to concentrate on firing in spite of their weapon's recoil and noise, which is noticeably different between the two cartridges. The 7.62 NATO has twice the impact energy of the 5.56 NATO, preferable if a target is protected by higher level armor, especially at "medium" range. If not, both rounds normally penetrate satisfactorily through enemies up to 600 meters, approximately. A 5.56 NATO round fired from a 20 in (510 mm) barrel has a flatter trajectory than a 7.62 NATO round fired from a barrel of equal length, while the 5.56 NATO fired from a 14.5 in (370 mm) barrel has the same trajectory as the 7.62 NATO from a 20 in barrel, as well as the same time of flight. A 7.62 NATO round reaches 50 percent of its velocity within 80 mm (3.1 in) of the barrel when fired, so decreasing the barrel length for close quarters combat results in increased muzzle pressure and greater noise and muzzle flash. [35][45]

Military cartridges

Australia

- Cartridge, Ball, F1: 5.56×45mm FN SS109 equivalent produced by Thales Australia, formerly Australian Defence Industries (ADI).
- Cartridge, Ball, F1A1 [Green tip]: 5.56×45mm with optimized projectile having a modified boat tail length and meplat diameter, redesigned case thickness, new primer cup design, and AR2210V01 propellant. [78][79]
- Cartridge, Blank, F3 [Crimped tip]: 5.56×45mm Blank cartridge produced by Thales Australia, formerly Australian Defence Industries (ADI).

Images of U.S. 5.56×45mm NATO ammunition

Belgium

Cartridge, Ball, SS109: 5.56×45mm 61-grain [3.95 g]^[80] Semi-Armor-Piercing cartridge w/. steel penetrator produced by <u>Fabrique Nationale</u>. Adopted in 1979 as the NATO standard.^[81]

Canada

- Cartridge, Ball, C77: 5.56×45mm FN SS109 equivalent used in the <u>C7</u>, C8 and <u>C9</u> type weapons. Made by General Dynamics Canada.
- Cartridge, Blank, C79 [Crimped tip]: 5.56×45mm blank cartridge used in the C7, C8 and C9 type weapons. Also made by General Dynamics Canada.

Germany

- Cartridge, Ball, DM11 [Green tip]: 5.56×45mm 4.1 g dual core ball cartridge w/steel core, produced by RUAG Ammotec.
- Cartridge, Tracer, DM21 [Orange tip]: 5.56×45mm tracer compliment to DM11, also produced by RUAG Ammotec.

South Africa

Cartridge, 5.56×45mm, Ball, M1A3 (South Africa): 55-grain FMJ Ball round based on the M193 cartridge. It is used with the R4/5/6 series assault rifles.

Switzerland

■ **5,6mm Gw Pat 90**: The 63-grain 5.56×45mm *Gewehrpatrone 90 / 5,6mm GP 90* ("5.6-mm Rifle Cartridge 90") is the Swiss Army's standard 5.56mm Ball round. It is optimized for use with the <u>Sturmgewehr 90</u> service rifle, both which were adopted in 1987. Originally the cartridge had a cupro-nickel jacketed bullet and Berdan primer, but it now has a tombac jacketed bullet and lead-free Boxer primer. Since 1997 most components of the round are made in Switzerland.

United Kingdom

- Cartridge, Ball, L2A1: 5.56×45mm M193 equivalent produced by Radway Green. [82]
- Round, Ball, L2A2: 5.56×45mm FN SS109 equivalent produced by Radway Green.
- Round, Tracer, L1A1 [Red tip]: 5.56×45mm tracer compliment to L2A1, produced by Radway Green.
- Round, Tracer, L1A2 [Red tip]: 5.56×45mm tracer compliment to L2A2, produced by Radway Green.
- Round, Blank, L1A1 & L1A2 [crimped tip]: 5.56×45mm blank training round, produced by Radway Green.
- Round, Drill, L1A1 [chromed body]: 5.56×45mm inert training round, produced by Radway Green.

United States

US Army

- Cartridge, Caliber 5.56 mm, Ball, M193: 5.56×45mm 55-grain [3.56 g] ball cartridge. This was type-standardized and designated by the US Army in September, 1963.
- Cartridge, Caliber 5.56 mm, Grenade, M195 [Crimped tip with Red lacquer seal]: 5.56×45mm high-pressure grenade-launching blank.
- Cartridge, Caliber 5.56 mm, Tracer, M196 [Red or Orange tip]:
 5.56×45mm 54-grain [3.43 g] tracer cartridge.
- Cartridge, Caliber 5.56 mm, High Pressure Test (HPT), M197
 [stannic-stained or nickel-plated case]: High-pressure Testing cartridge used when proofing weapons during manufacture, test, or repair.
- Cartridge, Caliber 5.56 mm, Dummy, M199 [No primer, Fluted case]: 5.56×45mm inert cartridge with fluted indentations in the case. Used for loading and unloading drills during basic training.

M855 and M856 cartridges in an ammunition belt using M27 disintegrating links.

- Cartridge, Caliber 5.56 mm, Blank, M200 [Crimped tip with Violet lacquer seal]: 5.56×45mm training blank cartridge.
- Cartridge, Caliber 5.56 mm, Ball, M202: 5.56x45mm 58-grain FN SSX822 cartridge.
- Cartridge, Caliber 5.56 mm, Dummy, M232 [No primer, Black-anodized case and bullet]: 5.56×45mm inert cartridge. Used for testing rifle mechanisms.
- Cartridge, Caliber 5.56 mm, Ball, XM287: 5.56×45mm 68-grain ball cartridge produced by Industries Valcartier, Inc. An Improved version was also produced designated XM779.
- Cartridge, Caliber 5.56 mm, Tracer, XM288: 5.56×45mm 68-grain tracer cartridge produced by Industries Valcartier,
 Inc. An Improved version was also produced designated XM780.

Cartridge, Caliber 5.56 mm, Grenade, M755 [Crimped tip with Yellow lacquer seal]: 5.56×45mm grenade launching blank specifically for the 64mm M234 launcher. The original white lacquer seal was discontinued due to excessive bore fouling.

- Cartridge, Caliber 5.56 mm, Ball, XM777: 5.56×45mm ball cartridge. An attempt to create a 55-grain SS109-style Semi-Armor-Piercing round that weighed the same as the M193 and could use the same US-standard 1-in-12-inch rifling. It replaced the 6×45mm SAW round as the baseline cartridge for the Squad Automatic Weapon trials in the late 1970s and early 1980s.
- Cartridge, Caliber 5.56 mm, Tracer, XM778: 5.56×45mm tracer cartridge mated with the XM777 Semi-Armor-Piercing cartridge.
- Cartridge, Caliber 5.56 mm, Ball, M855 [Green tip]: 5.56×45mm 62-grain FN SS109-equivalent ball cartridge with a steel penetrator tip over a lead core in a full copper jacket.
- Cartridge, Caliber 5.56 mm, Ball, M855LF Lead Free [Green tip]: 62-grain bullet with a steel penetrator tip over a tungsten-composite core in a full copper jacket. Primarily used during training in countries with strict lead disposal laws.^[83]
- Cartridge, Caliber 5.56 mm, Ball, M855A1 Enhanced Performance Round [unpainted steel penetrator tip]
 (2010–Present): 62-grain bullet w/ a 19-grain steel penetrator tip over a copper alloy core in a partial copper
 jacket. [84]
- Cartridge, Caliber 5.56 mm, Tracer, M856 [Orange tip]: 5.56×45mm 63.7-grain FN L110 tracer cartridge. Provides red visible light and lacks a steel penetrator. [83]
- Cartridge, Caliber 5.56 mm, Tracer, M856A1 [Red tip]: 5.56×45mm 56-grain Lead Free slug (LF) Tracer with similar ballistic performance to the M855A1 and improved trace to range consistency. [85]
- Cartridge, Caliber 5.56 mm, Plastic, Practice, M862 [Brass primer, Aluminum case and Blue plastic projectile]: Short Range Training Ammo (SRTA) has a smaller charge than standard ball, reducing its aimed range to 250 meters, and fires a plastic bullet. The M2 training bolt must be used in the M16 Rifle / M4 Carbine when using SRTA for the weapon to cycle properly due to its lower power. It is used during training on shooting ranges near built-up or populated areas.
- Cartridge, Caliber 5.56 mm, Armor Piercing, M995 [Black tip]: 5.56×45mm 52-grain AP cartridge with a tungsten core
- Cartridge, Caliber 5.56 mm, Tracer, XM996 [Crimson tip]: So-called "Dim Tracer" with reduced effect primarily for use with night vision devices.

US Air Force

■ Cartridge, Caliber 5.64 mm, Ball, MLU-26/P (National Stock Number:1305-968-5892): [86] Munition, Live, Unit #26 / Personnel use. Early USAF designation for a 55-grain 5.56×45mm FMJ Boat-Tailed ball cartridge produced by Remington-Union Metallic Cartridge Company (headstamp RA 63 or REM-UMC 63) in January, 1963. It was their designation for the commercial 55-grain .223 Remington M.C. ("Metallic-Cased", or Full Metal Jacketed) cartridge, which the Air Force initially designated "5.64 mm" rather than 5.56 mm. The order consisted of 8.5 million rounds and was procured for testing, training and unconventional warfare use with the XM16 rifle. The cartridges came packed unclipped in white 20-round commercial ammunition boxes.

US Navy & US Marine Corps

- Cartridge, Caliber 5.56 mm, Frangible, MK 255 Mod 0 [White Tip]: 5.56×45mm 62-grain Reduced Ricochet Limited Penetration (RRLP) round with copper/polymer composite core for training and operational use. [87]
- Cartridge, Caliber 5.56 mm, Special Ball, Long Range, Mk 262 Mod 0/1: 5.56×45mm 77-grain Open-Tipped Match/Hollow-Point Boat-Tail cartridge. Mod 0 features Sierra Matchking bullet, while Mod 1 features either Nosler or Sierra bullet.
- Cartridge, 5.56×45mm, semi-jacketed Frangible, MK 311 Mod 0: Reduced Ricochet Limited Penetration (R2LP) round, 50-grain frangible bullet intended for training. Produced by Western Cartridge Company (headstamp: WCC).

Cartridge, Caliber 5.56 mm Ball, Enhanced 5.56 mm Carbine, MK318 MOD 0: 5.56×45mm 62-grain Open-Tipped Match Boat-Tail cartridge. Optimized for use with 14-inch barreled weapons like the M4A1 Carbine and MK16 SCAR and designed to penetrate light barriers like windshields or car doors with no loss of accuracy or damage. [88][89] Now designated as Caliber 5.56 mm Ball, Carbine, Barrier.

SS109/M855

In 1970, NATO decided to standardize a second rifle caliber. Tests were conducted from 1977 to 1980 using U.S. XM777 5.56 mm, Belgian SS109 5.56 mm, British 4.85×49mm, and German 4.7×33mm caseless. No weapon could be agreed upon, as many were prototypes, but the SS109 was found to be the best round and standardized on October 28, 1980. The SS109 was developed in the 1970s for the FN FNC rifle and the FN Minimi machine gun. To increase the range of the Minimi, the round was created to penetrate 3.5 mm of steel at 600 meters. The SS109 had a steel tip and lead rear and was not required to penetrate body armor. Barrels required at least a 1:9 in rifle twist, but needed a 1:7 in rifle twist to fire tracer ammunition. [35][45][49] The U.S. designated the SS109 cartridge the M855 and first used it in the M16A2 rifle. The 62-grain round was heavier than the previous 55-grain M193. While the M855 had better armor penetrating ability, it is less likely to fragment after hitting a soft target. This lessens kinetic energy transfer to the target and reduces wounding capability.^[90] The M855 is yaw dependent, meaning it depends on the angle upon which it hits the target. If at a good angle, the round turns as it enters soft tissue, breaking apart and transferring its energy to what it hits. If impacting at a bad angle, it could pass through and fail to transfer its full energy. [51] The SS109 was made to pierce steel helmets at long range from the Minimi, not improve terminal performance on soft tissue from rifles or carbines. [39] In Iraq, troops that engaged insurgents at less than 150 yards found that M855 rounds did not provide enough stopping power. In addition to not causing lethal effects with two or more rounds, they did not effectively penetrate vehicle windshields, even with many rounds fired at extremely close range.^[91] In Afghanistan, troops found that M855 rounds also suffered at long ranges. Although 5.56 mm rifles have an effective range of 450-600 meters, the M855 bullet's performance falls off sharply beyond 300 meters. The ranges are even shorter for short-barreled carbines. Half of small-arms attacks were launched from 300-900 meter ranges.^[92] An M855 fired from an M4 Carbine has severely degraded performance beyond 150 meters.[39]

The maximum effective point target range of an M4 carbine with M855 rounds is 500 m (547 yd), with a maximum effective area target range of 600 m (656 yd). These mark the greatest distances the rounds can be expected to accurately hit the target, not the ranges that they have terminal effectiveness against them. Because the M855 is yaw dependent it requires instability in flight to deform upon hitting the target. It is the most stable in flight between 150–350 m (164–383 yd), potentially lessening its effectiveness if it strikes an enemy between those distances. In addition to this, tests have shown that 5.56 mm bullets fragment most reliably when traveling faster than 2,500 ft/s (760 m/s). From full-length 20 in (508 mm) rifle and machine gun barrels, rounds exhibit velocities above 2,500 ft/s (760 m/s) out to 200 m (219 yd). An M855 fired from a shorter barreled M4 carbine exhibits a bullet velocity of 2,522 ft/s (769 m/s) at 150 m (164 yd) range. Even if it impacts at optimum speeds, 70 percent of 5.56 mm bullets will not begin to yaw until 4.7 in (120 mm) of tissue penetration. 15 percent more begin to yaw after that distance, so up to 85 percent of rounds that hit do not start to fragment until nearly 5 in of penetration. Against small statured or thin combatants, the M855 has little chance of yawing before passing through cleanly and leaving a wound cavity no bigger than the bullet itself. The factors of impact angle and velocity, instability distance, and penetration before yaw reduce the round's predictable effectiveness considerably in combat situations. [93]

M855A1

Development

In mid-2005, a meeting was held at the <u>Lake City Army Ammunition Plant</u> as part of Phase II of the U.S. Army's Green Ammunition replacement program and attended by representatives from several military sectors and contractors. The objective was to create an environmentally friendly small arms training round after the Army had been required, in part by stronger state regulations, to remove lead from their bullets to reduce lead accumulation at stateside training ranges. Initially, Phase I efforts created the M855 "green tip" 5.56 mm round that replaced the lead core with one made of <u>tungsten</u>, but it was found that the round would become unstable in flight and fly sideways through a target; furthermore, research was suggesting that

M855A1 Enhanced Performance Round and its environmentally friendly projectile.

tungsten was not environmentally better than lead. Phase II efforts focused on creating an alternative round that did not contain either metal. As the <u>Iraq War</u> was happening at the same time, participants decided to use the opportunity to redirect their efforts from just making a "green" training round to creating an entirely new general-purpose rifle round to address complaints encountered in the field.^[94]

Complaints had surfaced about the poor lethality of standard M855 rounds against soft targets, although while some units claimed they had virtually no effect others said they were having no problems. The problem was "yaw sensitivity," where rounds experiencing swing in flight have varying effects when they hit a target based on the degree of yaw, resulting in unpredictable lethality effects. The makeup and design of the bullet affected accuracy. The copper jacket is formed first at the point, then a steel penetrator is inserted into the jacket and the projectile is crimped shut. Error in the penetrator placement can change flight performance and affect dispersion, and the rearward-drawn jacket can create an uneven boat tail leading to uneven airflow and more affected dispersion. It also was not optimized for use in short-barreled rifles. The M855 was originally made to burn and accelerate from the 20 in (510 mm) barrel of the M249 SAW; then it was repurposed to the M16A2 for ammunition compatibility. When fired from a short-barreled M4, lower muzzle velocity led to decreased terminal effectiveness, and unburned propellant fired from the end of the barrel created a brighter muzzle flash and caused more combustion debris to be pushed back in the gas tube, dirtying the weapon. [94]

Alternative 5.56 mm rounds in use were considered, like the Mk 262 open-tipped match cartridge. The Mk 262 was more accurate and had better soft target performance, and both Army and Marine units were using large quantities in Iraq deployments for designated marksman rifles. However, the Mk 262 was not adequate as a general-purpose round and cost four times more than the M855, so it could not be produced at the volumes required for 5.56 mm ammunition (up to 1 billion rounds annually). It was also found that performance suffered when fired from standard barrels, so match grade barrels would be needed for optimum performance. The M995 armor-piercing round had high accuracy and target penetration, but was eight times more expensive than the M855. Commercial alternatives were found to have the same yaw sensitivity issues as the M855. [94]

A number of objectives were desired for the new round, including more lethal, or at least more consistent, soft target effects and less shot dispersion. It must not be specialized for any one task to have general-purpose performance, and if improvement in any one area resulted that would be considered a secondary benefit. As the services were purchasing large numbers of optics, it could not require a different reticle pattern, but re-zeroing sights would be acceptable. Optimization for short-barreled rifles was needed, as the Army and Special Forces' main weapon was the M4 carbine; a flash-suppressed propellant was also required. Optimizing the round to perform within the pressure limits for short barrels would cause performance loss in longer barrels (causing complaints from the Marine Corps), but analysis showed that a short barrel-optimized round would have less performance loss fired from a long barrel than vice versa. The round also had to be cost-competitive and meet environmental standards.^[94]

The initial M855A1 design began testing in late 2007. Its alloy core had no toxic metals and could be cheaply produced. Materials and production methods, like a reverse-drawn jacket for a clean boat tail, led to yaw insensitivity, improved soft target performance, and consistent dispersion. The steel penetrator was retained and, through greater velocity and better composition and placement, substantially improved hard target performance. It met short-barrel optimization, ballistic similarity, and producibility requirements; it cost slightly more than the M855, but far less than the Mk 262. Production prove-out testing would take time, as over a million rounds had to be test-fired to ensure instances of failure would not occur at the 1 billion rounds per year scale. As information began to be made public, the original program objective to create a "green round" led to confusion and criticism that the Army was focusing more on environmental safety than on performance. Just as testing was being completed and the first production lots were being prepared in 2009, the rounds were found to fail at high temperatures. This caused a one-year delay to replace the bullet core, which solved the temperature problem and also improved cost and producibility. [94]

Deployment

On June 24, 2010, the United States Army announced it began shipping its new 5.56 mm cartridge, the M855A1 Enhanced Performance Round (EPR), to active combat zones. During testing, the M855A1 performed better than M80 7.62×51mm NATO ball ammunition against certain types of targets (particularly hardened steel). However, this was due to the addition of the steel penetrator to the M855A1 projectile compared to the standard lead-alloy core of the M80 projectile and is not an accurate comparison between the two cartridges. The US Army Picatinny Arsenal stated that the new M855A1 offers improved hard target capability, more consistent performance at all distances, enhanced dependability, improved accuracy, reduced muzzle flash, and higher velocity compared to the SS109/M855 round. Further, the Army stated the new M855A1 ammunition is tailored for use in M4 carbines, but should also give enhanced performance in M16 rifles and M249 light machine guns. The new 62-grain (4 g) projectile used in the M855A1 round has a copper core with a 19-grain (1.2 g) steel "stacked-cone" penetrating tip. The M855A1 cartridge is sometimes referred to as "green ammo" because it fires a lead free projectile. [84][85][95][96][97][98] It is not necessarily more lethal than the SS109/M855, but performs more consistently every time it hits a soft target and retains its performance at longer distances. The EPR can penetrate a 3/8 in (9.5 mm) thick mild steel barrier from an M4 at 350 m (380 yd) and from an M16 at 400 m (440 yd). Compared to the SS109/M855 the M855A1 muzzle velocities are somewhat increased to 3,150 ft/s (960 m/s) (+37 ft/s (11 m/s)) for the M16 and 2,970 ft/s (910 m/s) (+54 ft/s (16 m/s)) for the M4 carbine. [99] Ballistics for both rounds are similar and don't require weapons to be re-zeroed, but if they are the EPR can be slightly more accurate. The steel-tip penetrator of the M855A1 is noticeably separated from the jacket of the bullet and can spin, but this is part of

the design and does not affect performance. The M855A1 costs only 5 cents more per round than the M855.^[100] The M855A1 bullet has a ½ in (3.2 mm) greater length than the SS109/M855.^[101] Because steel and copper are less dense than lead, the bullet is lengthened inside the case to achieve the same weight as its predecessor.^[8] The longer bullet and reverse-drawn jacket make it more stable and accurate in-flight. Its steel tip is exposed from the jacket and bronzed for corrosion resistance. The tip is serrated and larger than the M855's steel tip. The M855A1's bullet composition, better aerodynamics, and higher proof pressures give it an extended effective range for penetration and terminal performance.^[102] While effectiveness at different ranges is increased, the M855A1 does not increase the effective ranges at which weapons are expected to hit their targets. The Enhanced Performance Round was made to nearly match the trajectory of the M855 to aid in training consistency - the SS109/M855 ballistic coefficient (G7 BC) of 0.151 was improved to 0.152 for the M855A1^[103] - but the ranges to get desired effects are greatly extended.^[104]

The M855A1 was put on hold in August 2009 due to the experimental <u>bismuth-tin</u> alloy core exhibiting undependable ballistics at high temperatures. The US Army has since replaced the bismuth-tin alloy core with one of solid copper eliminating the heat issue. The <u>United States Marine Corps</u> purchased 1.8 million rounds in 2010, with plans to adopt the round to replace the interim MK318 SOST rounds used in Afghanistan when the M855A1 project was delayed. [105] The Marine Corps plans to adopt the M855A1 round in 2018; although testing revealed it caused "some durability issues" with the Marines' M27 Infantry Automatic Rifle, the weapon is still "operationally suitable" when firing the round. [106]

On a media day at <u>Aberdeen Proving Ground</u> on May 4, 2011, reports were given about the M855A1's performance in the field since it was issued 11 months earlier. One primary advantage given by the round is its consistent performance against soft targets. While the older SS109/M855 was yaw-dependant, which means its effectiveness depends on its yaw angle when it hits a target, the M855A1 delivers the same effectiveness in a soft target no matter its yaw angle. The new SMP-842 propellant in the round burns quicker in the shorter <u>M4 carbine</u> barrel, ensuring less muzzle flash and greater muzzle velocity. The M855A1 was able to penetrate ³/₈ inch (9.5 mm) of mild steel plate at 300 m (330 yd). The round even penetrated concrete masonry units, similar to cinder blocks, at 75 m (82 yd) from an <u>M16</u> and at 50 m (55 yd) from an M4, which the M855 could not do at those ranges. Its accuracy is maintained and sometimes increased, as it was able to shoot a 2-inch group at 600 m (660 yd). February 2011 was the first time the M855A1 was used more than the M855, and approximately 30 million M855A1 rounds have been fielded from June 2010 to May 2011. [107][108]

The M855A1 was put to the test at the 2012 National Rifle Association's National High-Power Rifle Championship at Camp Perry, Ohio in August 2012. The shooter for the Army was Rob Harbison, a contractor supporting small caliber ammunition capability development at Fort Benning Georgia. This was a special event for the Project Manager for Maneuver Ammunition Systems and the Army's Maneuver Center of Excellence as it was an opportunity to showcase the capabilities of the Enhanced Performance Round. With an M16 loaded with M855A1 ammo, Harbison fired a perfect 200 points in the Coast Guard Trophy Match, which is 20 shots fired from the sitting position at 200 yards, finishing 17th out of 365 competitors. He also scored a perfect 100 on the final string of ten shots during the Air Force Cup Trophy Match, fired at 600 yards from the prone position, which is 10 shots in a row within the 12-inch, 10-point ring at 600 yards with combat ammunition. Harbison was happy with the performance of the EPR, with his scores showing that the Army's newest general purpose round is accurate enough to go toe-to-toe in the competition with the best ammo that can be bought or hand-loaded. Harbison even said, "I don't think I could have scored any higher if I was using match-grade

competition ammunition."^[109] The M855A1 was not fired from 1:7 in rifled barrels used in standard Army rifles, but special Army Marksmanship Unit (AMU) match-grade 1:8 in rifled barrels, which produce more accurate results when firing 62-grain rounds.^[101]

From fielding in June 2010 to September 2012, <u>Alliant Techsystems</u> delivered over 350 million M855A1 Enhanced Performance Rounds.^[110]

Since its introduction, the M855A1 has been criticized for its St. Mark's SMP842 propellant causing increased fouling of the gun barrel. Post-combat surveys have reported no issues with the EPR in combat. A series of tests found no significant difference in fouling between the old M855 and the M855A1. However, manufacturers have reported "severe degradation" to barrels of their rifles using the M855A1 in tests. [111] The Army attributes pressure and wear issues with the M855A1 to problems with the primer, which they claim to have addressed with a newly designed primer. [112] It uses a modified four-pronged primer anvil for more reliable powder ignition, [102] with a stab crimp rather than a circumferential crimp to better withstand the new load's higher chamber pressure, [101] increased from 55,000 psi (379.2 MPa) to 62,000 psi (427.5 MPa). [61] During Army carbine testing, the round caused "accelerated bolt wear" from higher chamber pressure and increased bore temperatures. Special Operator testing saw cracks appear on locking lugs and bolts at cam pin holes on average at 6,000 rounds, but sometimes as few as 3,000 rounds during intense automatic firing. Firing several thousand rounds with such high chamber pressures can lead to degraded accuracy over time as parts wear out; these effects can be mitigated through a round counter to keep track of part service life. Weapons with barrel lengths shorter than the M4 firing the M855A1 also experience 50 percent higher pressures than a full-length M16 rifle barrel, which can cause port erosion that can boost the automatic fire rate, increasing the likelihood of jams. [101]

From June 2010 to June 2013, issuing of the M855A1 Enhanced Performance Round removed 1,994 metric tons of lead from the waste stream. 2.1 grams (32 gr) of lead are eliminated from each M855A1 projectile. [113]

Mk 262

The **Mk 262** is a match-quality round manufactured by <u>Black Hills Ammunition</u> made originally for the <u>Special Purpose</u> <u>Rifle (SPR)</u>. It uses a 77-grain (5.0 g) Sierra MatchKing bullet that is more effective at longer ranges than the standard issue M855 round.

In 1999, SOCOM requested Black Hills Ammunition to develop ammunition for the Mk 12 SPR that SOCOM was designing. For the rifle to be accurate out to 600 yards, Black Hills "militarized" a cartridge that used the Sierra 77 grain OTM (Open Tip Match) projectile; it switched from a .223 Remington to 5.56 mm case, increased pressure loading, crimped and sealed the primer, and added a flash retardant to the powder. The Mk 262 Mod o was adopted in 2002. Issues came up in development including reliability problems in different temperatures and when the weapon got dirty, and cycling issues in cold weather due to the slightly shorter barrel of the SPR compared to the full-length M16A2 barrel. The problems were addressed with a slower burning powder with a different pressure for use in the barrel, creating the Mk 262 Mod 1 in 2003. During the product improvement stage, the new propellant was found to be more sensitive to heat in weapon chambers during rapid firings, resulting in increased pressures and failure to extract. This was addressed with another powder blend with higher heat tolerance and improved brass. Also during the stage, Black Hills wanted the bullet to be given a cannelure, which had been previously rejected for fear it would affect accuracy. It was eventually added for

effective crimping to ensure that the projectile would not move back into the case and cause a malfunction during autoload feeding. Although the temperature sensitive powder and new bullet changed specifications, the designation remained as the Mod 1.^[114]

According to US DoD sources, the Mk 262 round is capable of making kills at 700 meters. Ballistics tests found that the round caused "consistent initial yaw in soft tissue" between 3 and 4 in at ranges from 15 feet to 300 meters. Apparently it is superior to the standard M855 round when fired from an M4 or M16 rifle, increasing accuracy from 3–5 minutes of angle to 2 minute of angle. It possesses superior stopping power, and can allow for engagements to be extended to up to 700 meters when fired from an 18-inch barrel. It appears that this round can drastically improve the performance of any AR-15 weapon chambered to .223/5.56 mm. Superior accuracy, wounding capacity, stopping power and range have made this the preferred round of many special forces operators, and highly desirable as a replacement for the older, Belgian-designed 5.56×45mm SS109/M855 NATO round. In one engagement, a two-man special forces team reported 75 kills with 77 rounds. [115][116] The Mk 262 has a higher ballistic coefficient than the M855 of (G7) 0.181, meaning it loses less velocity at long-range. [103]

Mk318

Following early engagements in Afghanistan and Iraq, <u>U.S. Special Operations Forces</u> reported that M855 ammunition used in <u>M4A1</u> rifles was ineffective. In 2005, <u>the Pentagon</u> issued a formal request to the ammunition industry for "enhanced" ammunition. The only business that responded was the <u>Federal Cartridge Company</u>, owned by <u>Alliant Techsystems</u>. Working with the <u>Naval Surface Warfare Center Crane Division</u>, the team created performance objectives for the new ammo: increased consistency from shot to shot regardless of temperature changes, accuracy out of an M4A1 better than 2 <u>minute of angle</u> (2 inches at 100 yards, 3.9 inches at 300 yards), increased stopping power after passing through "intermediate barriers" like walls and car windshields, increased performance and decreased muzzle flash out of shorter barrel <u>FN SCAR</u> rifles, and costs close to the M855. The first prototypes were delivered to the government in August 2007. Increased velocity and decreased muzzle flash were accomplished by the type of powder used. The design of the bullet was called the Open Tip Match Rear Penetrator (OTMRP). The front of it is an open tip backed up by a lead core, while the rear half is solid brass. When the bullet hits a hard barrier, the front half of the bullet crushes against the barrier, breaking it so the penetrating half of the bullet can go through and hit the target. With the lead section penetrating the target and the brass section following, it was referred to as a "barrier blind" bullet. [48][117]

Officially designated the **Mk318 Mod o "Cartridge, Caliber 5.56mm Ball, Carbine, Barrier"**, and called SOST (*Special Operations Science and Technology*) ammunition, the 62-grain bullet fragments consistently, even out of a 10.5 in barrel. The lead portion fragments in the first few inches of soft tissue, then the solid copper rear penetrates 18 in of tissue (shown though <u>ballistic gelatin</u>) while tumbling. Out of a 14" in barrel, the Mk318 has a muzzle velocity of 2,925 ft/s (892 m/s). [48][117]

In February 2010, the <u>U.S. Marine Corps</u> adopted the Mk318 for use by infantry. To be fielded by an entire branch of the military, the round is classified as having an "open-tip" bullet, similar to the <u>M118LR 7.62 NATO</u> round. The SOST bullet uses a "reverse drawn" forming process. The base of the bullet is made first, the lead core is placed on top of it, and then the jacketing is pulled up around the lead core from bottom to tip. Conventional, and cheaper, bullets are made with the method of the jacket drawn from the nose to an exposed lead base. The reverse drawn technique leaves an open tip as a

byproduct of the manufacturing process, and is not specifically designed for expansion or to affect terminal ballistics. The Pentagon legally cleared the rounds for Marine use in late January. The Marines fielded the Mk318 gradually and in small numbers. Initial studies showed that insurgents hit by it suffered larger exit wounds, although information was limited. SOST rounds were used alongside M855 rounds in situations where the SOST would be more effective. [48][117][118] In July 2010, the Marines purchased 1.8 million M855A1 Enhanced Performance Rounds, in addition to millions of Mk318 rounds in service, as part of its effort to replace its M855 ammo. [119] As of May 2015, Marine combat units still deployed with a mixture of both SOST and M855 rounds. [120]

As the issue of environmentally friendly ammo grew, the Marines looked to see if the Mk318's lead could be replaced while still meeting specifications. They found that by replacing the lead with copper and slightly stretching the jacket around to crimp the nose even more, the bullet's ballistic coefficient increased. To avoid visual confusion with the Mk 262 round, the bullet was entirely nickel-plated for a silver color; the enhanced silver-colored copper jacketed, open tip match, 62-grain projectile was named the **Mk318 Mod 1**.^[121]

5.6mm Gewehr Patrone 90

The **5.6mm** *Gewehr Patrone* **90** or **GP 90** (5.6 mm Rifle Cartridge 90), is the standard round used by the <u>Swiss military</u> in its rifle, the <u>SIG SG 550</u>. The cartridge is also known as the **Cart 5,6mm 90 F** (French > *Cartouche pour Fusil* / Italian > *Cartuccia per Fucile*) to the French- and Italian-speaking Swiss militiamen. The Swiss refer to the round as the 5.6 mm Gw Pat 90, although it is interchangeable with the 5.56×45mm NATO and <u>.223</u> Remington round. The Gw Pat 90 round firing a 4.1 g (63 gr) FMJ bullet is optimized for use in 5.56 mm (.223 in) caliber barrels with a 254 mm (1:10 in) twist rate.

The Gw Pat 90 was designed for the SIG SG 550 when it came into production in 1987, replacing the SIG SG 510. Previous experience of a change in standard rifle had proved that changing the distance of fire for the training ranges was more expensive than the design of a new ammunition; this prompted the design of a cartridge nominally capable at 300 meters. The cartridge was also designed to reduce pollution by controlling lead emissions. The bullet was originally clad with a nickel alloy jacket, however, this was found to cause excessive barrel wear, so in 1998 the nickel jackets were replaced with tombac jackets. In addition, in 1999 a copper plug was added to the base of the bullet to address environmental concerns. [122]

The ammunition is currently (2009) produced by <u>RUAG Ammotec</u>, a <u>subsidiary</u> of the <u>RUAG group</u>.^[123] The ammunition is manufactured in three variations: the standard FMJ round, the tracer round, and a blank round.

Swiss Army 50-round Gw Pat 90 ammunition box.

Swiss Army Gw Lsp Pat 90 tracer rounds.

The FMJ cartridge has a Copper-Zinc alloy case and uses a double base propellant. The bullet is a 4.1 g (63 gr) tombac jacketed FMJ projectile with a G1 ballistic coefficient of 0.331 (ICAO) / 0.337 (Army Metro). The projectile contains approximately 95% Pb, 2% Sb, 3% Cu, and was designed for terminal ballistic instability. The required accuracy for Gw Pat 90 ammunition out of factory test barrels is 63 mm (0.72 MOA) for 10 rounds (100% radius measurement method) out to 300 m. The Gw Pat 90 cartridge dimensions are in accordance with the civilian C.I.P. standards for the .223 Remington C.I.P. chambering.^[124]

The Gw Pat 90 is used both in the Swiss military and in sport shooting. The very high level of individual training in the Swiss militia (every single soldier bearing a weapon has to shoot for qualification once a year; see <u>Gun laws in Switzerland</u>) and the overall use of the Gw Pat 90 by the many Swiss citizens who shoot in competitions and for amusement has resulted in significant input on its usage. Over 1 billion cartridges had been produced as of 2005.

IRS Information

Norfolk Nato Festival is a registered tax-

- exempt organization with the IRS.
- The organization was required to file a Form 990 or 990EZ with the IRS for the most recent tax year.

Income & Expenses

Share

Income

In 2014, this organization filed a Form 990 with the IRS, reporting \$232,068 USD in income. See below for more information on the organization's funding sources.

Income Breakdown Over Time

- Total Contributions
- Program Service Revenue
- ☐ Fundraising Income
- Investment Income
- Unclassified Revenue

Income Decline Driven by Decrease in Contributions

In 2014, Norfolk Nato Festival reported \$232 k in income, down 28% from the previous year. This drop can primarily be attributed to a \$78.3 k decline in contributions. However, not all funding sources experienced a drop; program revenue saw a 370% increase over the same time period.

Funded Primarily by Contributions

Like most Cultural Awareness Organizations in its peer group, Norfolk Nato Festival is funded primarily through contributions. The organization is highly dependent on this type of funding, as it accounts for 87% of total income

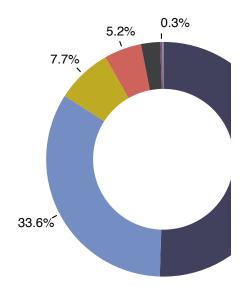

See Other Organizations Funded Mainly by

Contributions >

Expenses

In 2014, this organization filed a Form 990 with the IRS, reporting \$256,744 USD in total expenses. See below for more information on expense breakdown.

- Unclassified Expenses
- Total Personnel Costs
- Professional Fees
- Advertising and Promotion
- Insurance
- Conferences, Conventions, Meetings
- ☐ Depreciation, Depletion, Amortization

Expenses Breakdown

- In 2014, Norfolk Nato Festival cut costs by 18%. Income, however, also saw a 28% decline
- The organization's primary cost driver is unclassified expenses, which accounted for 50% of total expenses in 2014. This is not out of line - the largest expense for other organizations in this peer group is typically unclassified expenses.
- The organization did not report any grant expenses to the IRS in 2014. This indicates that the organization provides help through direct services rather than grants.

See Organizations With Similar Expenses >

Personnel Cost Breakdown

Compensation

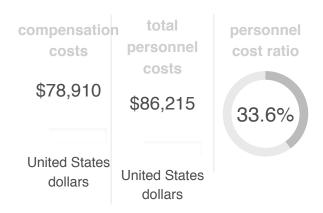

Compensation costs include salaries of officers, directors, and employees from this organization's Form 990 filed in 2014. Personnel costs include compensation costs plus pension plan contributions and other employee benefits.

Personnel Cost Ratio

Cost Breakdown

Median Personnel Cost Ratio

Norfolk Nato Festival spent 33.6% of its expenses on personnel costs in 2014. This is:

- In line with other nonprofits in Norfolk,
 Virginia (where the typical organization spends 39.4% of its total expenses on personnel)
- In line with similarly sized Cultural
 Awareness Organizations nationwide
 (where the typical organization spends
 33.9% of its total expenses on personnel)

Financial Health

Financial health metrics are calculated using financial data from this organization's Form 990.

Asset Breakdown

Analysis of asset mix can help to identify the resources available to deliver future services.

2014 Asset Breakdown

Liquidity

Liquidity refers to the ability of a nonprofit to pay its obligations on time.

	Organization	Peer Group Median	% Difference
Current Ratio	5.36	8.04	-33.33%
Days Cash on Hand	93	179	-48.04%

- Current Ratio: Norfolk Nato Festival has a current ratio of 5.36. A ratio above 1 suggests that the organization would be able to pay off its obligations if they became due immediately.
- Days Cash on Hand: If they were to stop receiving revenue, the organization could continue to pay the bills for around 3 months. Generally at least three months of cash on hand is desirable.

Leverage

Leverage measures how much of a nonprofit's assets are funded by other people's money. It is calculated by dividing liabilities by assets.

Peer Organization Group **Difference** Median Leverage 18.75% Profitability & Moneymaking Activities Share Functional Revenues vs. **Profitability Expenses** With a \$24.7 k loss and a -10.6% profit margin in 2014, Norfolk Nato Festival was not profitable. While nonprofit performance is not measured by profitability, as it is in the private sector, a low margin could indicate financial distress or total total profit profit functional functional margin revenue expenses -\$24,676 \$232,068 \$256,744 -10.6% **United States** United States United States dollars dollars dollars Trend Analysis Share Contributions Program Service Revenue Income **Expenses** Compensation **Income Over Time**

Hello

I don't know. Some people say this wood does that and that wood does this. I'm one of those heretics that think it doesn't really matter.

I think we're all too lay'd back here to notice a difference. Now Hog v. Rosewood yea. But Nato v. Hog? Prolly not much if any.

There's another popular board (nameless \bigcirc) that has lot's of purists, they might know?

In Internet slang, a **troll** (/troul, trol/) is a person who sows discord on the Internet by starting quarrels or upsetting people, by posting inflammatory, extraneous, or off topic messages in an online community (such as a newsgroup, forum, chat room or blog) with the intent of provoking readers into an emotional response or of otherwise disrupting normal, on-topic discussion, often for the troll's amusement.

There's no reasoning with a tRump supporter. If there

I'm even more of a heretic. I think the back and sides can be overwhelmed by other factors in term of sound to the point that it becomes irrelevant.

I can definitely hear the difference between rosewood and nato/hog, but can't really distinguish (by ear, or even sight in many cases) between nato and hog. That includes laminate back/side guitars too.

From my understanding,Nato is a Mahogany type of wood.Some say it is a type of Mahogany,a less cheaper version.You'd have to have a lot better hearing than me to tell the difference.

believe it is impossible to know what the "nature" of the sound of the back and sides of a guitar are. To begin to get an idea you would have to do some scientific listening tests and I don't believe anybody has ever done that. I've done all kinds of scientifically valid listening tests but I wouldn't know where to begin with guitars. Comparing two different guitars at different times is meaningless.

I can out-heretic all of you. I

get a valid sample you would have to test many, many guitars at the same time in the same room with exactly the same performance with a panel of listeners in a bias controlled environment. If it would be possible to make two guitars EXACTLY the same but with different back and side materials, you might

convince me that it would represent a valid comparison

but I'm not sure that's

Completely meaningless. To

http://www.harmonycentral.com/forum/forum/guitar/acapella-42/1329163-

possible. I think you would need to do it with a statistically appropriate sample of instruments and listeners. It's a really difficult thing to do.

I'm not suggesting all guitars sound the same. They don't. But I doubt seriously that the composition of the back and sides has much or anything to do with it. I firmly believe nobody has done tests that I would consider scientifically valid to find out either.

So to all you heretics I can only say that I agree with you and go one step further to say that you can't even know the difference if there is one. You can think you do but, until you do it right, you would never convince someone experienced at bias controlled listening tests.

Fred

I'm gonna challenge that....With no disrespect....a good song is a good song just like a good sounding guitar isn't always an expensive one...the ear likes what the ear likes...the intro to Led Zeppelin"s "Babe I'm leaving you" was played on a Yamaha acoustic, the solo to "Stairway to Heaven" was played on you'll never guess, a Danalectro quitar. Go back and listen to that solo and in my estimation, that's the last guitar I would pick but

amazing sound on that solo and everything else. Sound is everything, it doesn't matter how you get it, you just get it (aka...the 70's) unfortunately or fortunately we have amazing computers and recording programs and now you don't have to do nearly half the work, I think it takes away some of the natural creativity people have in their own being, but everybody's gonna have to embrace this and keep trying to make great music in spite of this so called progress. Ability? (YES!) Progress? (Not necessarily convinced) I actually believe it's fundamental to learn how to play things you want to play and do things you want to do, it helps you in life to know you accomplished something you set out to do with some real effort towards your goal.

I think a Mahogany Martin D15 smells fantastic. Mahogany seems to have less dark striations in the grain therefore a more uniform color as opposed to Nato I have seen. I think that Mahogany also tends to have a boomy-ness to it in acoustics guitars. All of these points are merely personal observations from owning two Mahogany guitars.

I can out-heretic all of you. I believe it is impossible to know what the "nature" of the sound of the back and sides of a guitar are. To begin to get an idea you would have to do some scientific listening tests and I don't believe anybody has ever done that. I've done all kinds of scientifically valid listening tests but I wouldn't know where to begin with guitars. Comparing two different guitars at different times is meaningless. Completely meaningless. To get a valid sample you would have to test many, many guitars at the same time in the same room with exactly the same performance with a panel of listeners in a bias controlled environment. If it would be possible to make

two guitars EXACTLY the same but with different back and side materials, you might convince me that it would represent a valid comparison but I'm not sure that's possible. I think you would need to do it with a statistically appropriate sample of instruments and listeners. It's a really difficult thing to do.

I'm not suggesting all guitars sound the same. They don't. But I doubt seriously that the composition of the back and sides has much or anything to do with it. I firmly believe nobody has done tests that I would consider scientifically valid to find out either.

So to all you heretics I can only say that I agree with you and go one step further to say that you can't even know the difference if there is one. You can think you do but, until you do it right, you would never convince someone experienced at bias controlled listening tests.

I feel sorry for all of those crash test dummies who suffer testing tonewoods on our behalf.

IF IT AINT BROKE, DON'T FIX IT.

What you're talking about is perfection and life outside the lab isn't like that.

I know what I've heard in my time, in all sorts of live situations and on my workbench. I can tell the difference in sound between rosewood and mahogany or laminate vs solid in most cases.

If Nato is the Mahogany I know as Vietnamese Mahogany, (local to SE Asia), I don't think it sounds very good.

The Maple guitars here sound fantastic. VN Rosewood & IR can be great but are more hit & miss.

The Hog guitars I've heard here have a very dark tone. Good for warm, fat harmonic notes, but not much else.

I received the Nato guitar in the mail, and compared to my Martin D15LE, it has less depth in the bass-mids and has a predominant sharp treble. Mahogany seems to have a greater warmth across the board. In the scheme of things, the top is the most important part of the guitar; the sides effect the timbre (color).

I'm not an expert, but i'd have thought so. Generally speaking, if it's mid-priced and made in Korea or China, personally I just assume it's phillipine mahogany/nato/luan/whatever you want to call it. There's some info on wiki... that's where i get a lot of my info from...

most of the guys using quality mahogany will spec it as so (i.e. they'll specify where it's from)... african (not "real" mahogany, but closely related and a good tonewood), or brazilian, honduran, south american, something like that.

I'm an idiot and I accidentally clicked the "Remove all subscriptions" button. If it seems like I'm ignoring you, I'm not, I'm just no longer subscribed to the thread. If you quote me or do the @user thing at me, hopefully it'll notify me through my notifications and I'll get back to you.

Quote by K33nbl4d3

I'll have to put the Classic T models on my to-try list. Shame the finish options there are Anachronism Gold, Nuclear Waste and Aged Clown, because in principle the plaintop is right up mv allev.

Quote by K33nbl4d3

Presumably because the CCF (Combined Corksniffing Forces) of MLP and Gibson forums would rise up against them, plunging the land into war.

Mahogany is a generic term that refers to several spices of dark colored wood. Nato mahogany is not #12

laminated, laminated nato mahogany is. Mahogany that is used in older guitars was from Cuba. Now the "mahogany" used is from Asia. Bottom line is a well built guitar using a decent wood is going to sound good. If laminates are used well then the guitar will be easier to take care of and not as susceptible to

atmospheric conditions. However, when talking about the soundboard that's another subject for another

Nato is horrible, I have a BC rich made from it and it's so trebley and high mids based - nothing like

What kind of wood is NATO?

Discussion in 'Acoustic Heaven' started by miurasv, Dec 10, 2010.

84

Nov 23, 2010

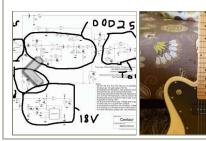

APX700 yesterday and it had a solid top and NATO back and sides. What kind of wood is this? Is it solid or a laminate? Thanks in advance.

I was looking at a very nice Yamaha

the money. I love most of the Yamaha acoustics.

Personally I don't mind nato. Its not great, but a guitar with a good top can still sound good with nato back and sides. Guitar companies like to call it "Eastern Mahogany"....I think just to make the name seem better, as I don't think its really related to Mahogany. Nato wood actually comes from the Mora genus of trees...which originates in the Caribbean and South America. Coincidentally, the rain forests in those regions are disappearing. Take that for what its worth.

I just googled it and found info on wikipedia. It must be a solid wood from the info therein although I'm probably misunderstanding the information. Link below.

I always remember reading "nato mahogany" in certain guitar's specs (I think I once owned a nato Alvarez, fine guitar) when a company wanted to market a guitar that was not actually mahogany, but nato, which looks like mahogany and may sound like it...Whether it is laminate or solid depends upon the build

They can make necks out of which seem to behave just like mahogany; so, maybe it's a fair description to say it is mahogany-*like* even if it isn't technically accurate.

(/welcome) ARTISTS (/ARTIST-LANDING)

WOOD TYPES

Bubinga

This wood is full and responsive. Though not having the depth of Rosewood, it offers a much broader tonal response than mahogany.

Cedar

This is frequently used as an acoustic guitar soundboard - especially on nylong string guitars - and has a warm, soft, open sound with beautiful overtones.

Cocobolo

Cocobolo is a beautifully figured wood. It's visual spectrum ranges from the most brilliant reds, all the way through to the purest black.

c a f

а

Τ

http://www.takamine.com/wood

Used for: Back/sides

Used for: Soundboard

It is dense and hard, giving notes an immediate attack with long sustain. The sound is deep, with beautiful bell like overtones.

f

 ϵ

E

Used for: Back/sides

Koa

Koa is a very dense wood with solid, pronounced mid tones with beautiful lows and well defined, but not sparkling, highs. This wood repsonds very well to firmer playing.

Used for: Soundboards. Back/sides

Mahogany

Physically lighter than rosewood, maple or koa, mahogany is no less popular as a tonewood. The response of mahogany is often described as 'quick' meaning that it is extremely dynamic, while the tone is very warm and rounded with an emphasis on the mid range.

Maple

Clear upper mid range and high frequencies along with a tight, focussed output and long sustain make this a very popular choice among some acoustic guitarists.

The Flame characteristic is found in some maple and running through the wood perpendicular to the grain.

refers to a beautiful pattern

Page 2 of 5

C

а

r

1

t

le

C

ι

The top end is clear, but does not 'sparkle'.

Used for: Back/sides

Used for: Back/sides

Ovangkol

This wood is native to West Africa and has a beautiful appearance featuring colourful stripes ranging from golden browns through to greys and blacks.

Tonally, it features a deep, warm low and mid range similar to rosewood, but has a much punchier high end which is much more like the tones obtained from Maple.

Used for: Back/sides

Quilt Maple

Like standard maple, this variation is loud and tightly focussed with an emphasis on the upper mids and high end registers.

The term 'quilt' refers to the very distinctive patterning on the wood itself.

Used for: Back/sides

Rosewood

Offering full bass, defined but warm mids, and punchy highs, rosewood is very highly regarded as a tone wood for building acoustic guitars.

Visually, it is also beatiful. Rich colours varying from red through to black make rosewood a very popular choice.

Used for: Back/sides

l

Takamine Guitars | Wood Types 3/9/18, 2:06 PM

Sapele

This dense tonewood has a look similar to mahogany, but with a very distinctive striped grain.

Being relatively dense, the sound of sapele is crisp, clear and bright while retaining a good level of warmth in the lower ends and lower mids.

Used for: Back/sides

Spruce

Spruce is the most commonly used wood for the soundboard or 'top' of the guitar. It's stiff, yet light characteristics give it a bright, clear tone.

Used for: Soundboards

Bearclaw Spruce

Spruce is the most commonly used wood for the soundboard or 'top' of the guitar. It's stiff, yet light characteristics give it a bright, clear tone.

'Bear Claw' is a variant whereby the pattern on the wood resembles the clawing of a bear.

Used for: Soundboards

Nato wood 3/9/18, 2:07 PM

Revolvy (/main) (/quizzes/all)

≔(/series)

(/main/index.php?pagetype=trending)

Nato wood

Nato wood

Nato wood is a Save collective name for wood from Mora (/mairi/index.php?s=Mora+ (plant)&item_type=topic) trees (the best-known species are Mora excelsa (Mora) and Mora gonggrijpii (Morabukea). This should not be confused with Nyatoh (/mairi/index.php? s=Nyatoh&item_type=topic) (an Asian hardwood from the Sapotaceae

(/main/index.php?s=Sapotaceae&item_type=topic) family with a very similar look and characteristic to Honduras Mahogany (/main/index.php? s=Honduras+Mahogany&item_type=topic), though totally unrelated).

Mora may vary in appearance, with reddish brown being the dominant color, but with varying shades and often with darker or lighter streaks. It has a similar appearance to mahogany (/rnain/index.php? s=Mahogany&item_type=topic), and as such it is often referred to as "eastern mahogany". Despite this, the two are unrelated. The heartwood (/main/index.php?s=Heartwood&item_type=topic) is light to medium reddish brown. Wide pale yellow-brown sapwood is clearly demarcated from heartwood. It has a straight to interlocked grain, with a medium to coarse texture and good natural luster. [1] The wood is dense and it is not particularly easy to dry or to work, although it finishes well. Mora wood

species are not listed in the citeS Appendices^[2] or on the IUCN Red List of

will be knocked out!

Medallion Grade Quilted Maple

In the past 20 years I have sold beautiful tone woods to many guitar manufacturers when they wanted something extremely nice for a special customer.

I specialize in many different rare specimens. The wood list above will give you an idea as to what I have in stock. I generally have a selection of almost everything on the list.

I am always looking for new and strange examples of different species.

Recently I have been experimenting with Redwood & Giant Sequoia, I have found the wood both beautiful & extremely resonant sounding.

I generally hand-pick every single piece of wood that I buy. I select each piece for tone and beauty and I spare no expense to buy the absolute finest wood I can find.

I make several trips a year to the Pacific Northwest and I actually visit the sawmills. Sometimes I only buy one or two pieces in a day, and as you can imagine this drives the price up. If you get to see the woods I have stockpiled in my wood room though, you

Maple is a strong and extremely dense, heavy wood. It is excellent for guitar necks and bodies because it can handle an inordinate amount of string tension. Maple has a bright and crisp tone and is used on flamenco guitars as well as some electrics. It has a wide variety of exotic grains that show up quite well when finished. Flamed maple is a very popular and brilliant looking exotic type of maple. "Flamed" refers to the rippling, or curls of the grain of wood that run across the body. Flamed maple is generally "book matched," which means that the body is made of two half pieces of a single cut piece of maple. This gives the guitar even weight, look and tone throughout the body.

We would sell this stock for under 2,000 at any quality Gun Shop Maybe I'm In The Wrong Business!!

We No Longer Build Custom Gunstocks.

Gibson's Retopped in our shop
Left 5A Burley Maple --- Middle 4A Flamed Maple --- Right 4A Quilt/Flame Maple

Assorted Blank Fingerboards

I have Solid Brazilian Rosewood Neck Blanks for \$400.00 just like PRS used on their \$9,000.00 Rosewood Ltd. Model (I buy them from the same supplier that PRS buys from) I also have solid Ebony & African Rosewood necks available.

If you would like to make an appointment to get together to pick out a special piece of wood for an electric guitar please call me. *Ed Roman* (702) 597-0147

Building A Better Guitar

By Ed Roman

When I set out to build a better traditional type guitar, I had several problems. These problems were John Suhr, Tom Anderson, Gerard Melancon, Don Grosh, Gary Levinson.

These people were already building guitars that were heads and tails better than anything any large corporation ever did. I couldn't just

build it a little better. I had to build it much better than the luthiers listed in the above paragraph.

I had to use better wood, better pickups, better hardware, I had to make tighter neck joints, get a higher reach, get even closer tolerances, offer more options and do better setups, and because I was the new kid on the block I had to do it for less money.

Click Here For the Whole Article.

Wood is one of the largest determining factors of a guitar's sound and longevity. Specific woods used to build guitars, acoustic and electric, are called Tone woods. Tone woods have resonant properties that other woods do not. For example, oak is a beautiful and strong wood, but it has no resonant properties, which would not be best for guitar building.

Pearlcaster Area In Our Shop

Raw Chunk of Koa Wood

Standard Woods In Use By Most Companies

Mahogany

Mahogany is a moderately dense and very durable wood. It is commonly used for the backs, sides and necks of acoustic guitars. It is sometimes used on electric guitar bodies and necks. Because it is very sonorous and durable, mahogany is also used in banjos, resonators, ukuleles and acoustic guitar soundboards. It is lighter than maple and specifically provides acoustic guitars with great sustain. Mahogany also provides great weight balance between the neck and the body of an acoustic. It is reddish-brown in color and is incredibly strong and resonant, giving the guitar big, beautiful tones.

We don't use to much mahogany at Ed Roman's simply because we are known as an exotic builder. People generally expect something a little more exotic from us.

Koa Wood

Koa is a gorgeous wood with well defined curly and flamed grain patterns as found in instrument quality Maple. It falls in the middle of the tonal spectrum, giving the instrument a brightness of tone without sacrificing warmth. It is slightly less round in tone than the rosewoods. We have been building custom Koa guitars for close to 20 years.

Alder

We find that alder has the richest tone, characterized by lots of fat low-end, well defined mid ranges and a lot of sustain. Alder is a light wood, which makes it more comfortable for lengthy gigs. It is one of the original woods used for solid body guitars. Although other manufacturers use woods like poplar and basswood, they are considered alder substitutes. We don't use to much Alder at Ed Roman's simply because we are known as an exotic builder. People generally expect something a little more exotic from us

Solid Alder

Solid Alder is a fairly light and incredibly resilient wood that is a favorite amongst electric guitar makers. It is a close-grained wood with a naturally light tan color. Alder is mostly used for electric guitar bodybuilding because of its full sound, great sustain and density. It is a porous wood that takes quite well to a variety of finishes. This gives the guitar a richer sound because the solid wood soundboard can vibrate more freely & thoroughly.

Spruce

Spruce is the most commonly used wood on acoustic guitar soundboards. The soundboards on acoustics are generally made of tightly grained spruce. Naturally yellow in color, spruce is a lightwood that has a very high degree of resonance, so it is a perfect match for acoustic guitars.

Solid Spruce

Solid spruce refers less to a difference in the wood than to how it is actually cut for the guitar. Laminate spruce soundboards are built as layers of cross-grained wood glued to each other. Solid spruce soundboards consist of one piece of wood running all the way through. This gives the guitar a richer sound because the solid wood soundboard can vibrate more freely and thoroughly.

Canadian Sitka Spruce

is a harder to find, more expensive variety of spruce. It has a light yellow color and is also used for acoustic guitar soundboards. It gives guitars a bigger more resonant sound, flush with crisp highs. It also improves with age more than other types of spruce.

German Spruce

This increasingly rare wood has a higher weight to strength ratio than Sitka and correspondingly complements the brightness and clarity of the guitars.

Maple

Maple is a strong and extremely dense, heavy wood. It is excellent for guitar necks and bodies because it can handle an inordinate amount of string tension. Maple has a bright and crisp tone and is used on flamenco guitars as well as some electrics. It has a wide variety of exotic

grains that show up quite well when finished. Flamed maple is a very popular and brilliant looking exotic type of maple. "Flamed" refers to the rippling, or curls of the grain of wood that run across the body. Flamed maple in generally "book matched," which means that the body is made of two half pieces of a single cut piece of maple. This gives the guitar even weight, look and tone throughout the body.

Cedar

Many companies use Cedar or some type of redwood specifically for finger style instruments as it responds quickly and with good volume to a light attack. It is also very well suited to open or lowered tension tunings as they require the same qualities for good separation and definition. Cedar does lose tonal integrity when over driven, making it a poor choice for versatility but an excellent top wood for showcasing finger styles.

Brazilian Rosewood

Highly sought after by generations of luthiers and players for its unmatched beauty. Brazilian helps to impart warmth and darkness to the tone of the guitar. Tonal differences between Brazilian and Indian Rosewoods are subtle and consideration should be based on aesthetics, rarity, future value, and collectibility.

East Indian Rosewood

Like Brazilian, Indian Rosewood keeps the guitar at the warm dark end of the tonal spectrum. While not as visually striking as Brazilian, Indian Rosewood has an elegant appearance and should not be considered inferior to Brazilian on any account. Just the same we never ever use it For fingerboards we use ebony, pau ferro or at very least Madagascar rosewood which is much more stunning than the plain old Indian rosewood.

Nato

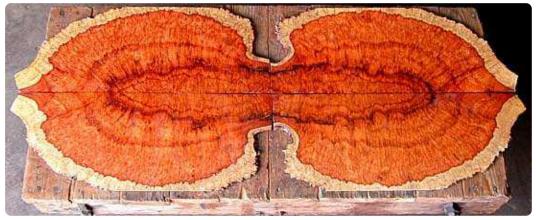

Nato wood, also known as Eastern Mahogany, is a reliable, strong wood used on low cost guitar necks. It is a value-priced wood used more for beginner instruments. However, it still embodies some of the properties of more commonly used mahogany. While we would never use this wood on one of our custom guitars, We do carry several low end \$100.00 & \$200.00 guitars that are made from it.

JET Guitars are not cheap they usually run from \$4,500.00 to \$9,000.00 But They Are Worth Every Penny

A piece of wood like above can cost well over \$4,000.00

These Photos From The PRS Factory

You are looking at a CNC machine Computer Numerically Controlled

All of the delicate cutting operations are done by \$85,000.00 machine. All of the shaping, sanding, binding & fitting is robotically accomplished. There are no human hands, no human eyes to line up the wood perfectly so that imperfections in the wood fall into locations that won't be seen later.

There is nothing illegal about building a guitar with a machine. I feel, it's totally unethical and immoral to charge the extremely high hand made prices. just because you made your original reputation by building handmade guitars.

Most every large company is guilty of this, I can think of very few large companies who still actually handbuild their guitars.

BC Rich USA, Jackson Custom Shop, & maybe the PRS private stock guitars are semi hand built. These are all I can think of, off the top of my head. I repeat, There is nothing wrong with CNC made guitars except that they are usually overpriced and under built. They generally lack a certain vibe, soul or character that can only be achieved from a hand built guitar. Not everyone can necessarily benefit from these detailed characteristics, So that's why a custom made hand built guitar isn't for everyone. I always recommend a mid priced machine made Fender, Jackson, Dean, OLP, Hamer, or Ibanez for a beginner or for the working musician who needs a good low cost guitar. A custom made guitar is not for everyone. When and if, you finally decide to get a custom made instrument, you cross the threshold between good & great. Today a machine made guitar is considered a tool and a handmade one is potentially an heirloom or an investment guitar.

The worst offenders that I can think of is ESP, Lakland, Gibson & Taylor. Many people assume that these companies are hand building. The ESP guitars are totally machine made in Asia and priced incredibly high. The Lakland guitars offer a USA made and an Asian made model, Both are so unbelievably overpriced that It should be a crime. Gibson guitars are well known for being overpriced by everyone, I feel that their machine made guitars are overpriced so much that even if they were handmade they are still incredibly overpriced. In the case of Taylor, they are also machine made and if you pay attention to their ridiculous image based advertising campaign you might think they were handmade.

PRS on the other hand has publicly stated that they are %100 machine made. (Kudos For Honesty) Up until a couple of years ago they actually used to be proud of it, They even boasted about it. Today the consumer isn't as stupid as they used to be, thanks to people who print these little expos�'s on their websites. Today PRS doesn't call too much attention to it and in their last catalog they show numerous photos of craftsmen actually carving guitars. I presume those guitars are their private stock models, I know they are not the models you will see when you walk into a big box store or corporate superstore.

Tom Anderson says he builds three guitars a day, that may be %100 true. Or is this just a clever way to possibly make the consumer think they are handmade. Because Tom has CNC machinery and if he wanted to he could produce many more guitars a day.

This whole article was prompted by a customer who attempted to trade in a plain black blah looking Sadowsky NYC Bass earlier today.

I offered the customer what I considered to be a very generous trade in, I actually offered him way too much by my standard, \$2,000.00 because I had heard that these basses were pretty good.

When he told me he wanted \$3,500.00 for the bass I was appalled. This instrument is made from parts & constructed almost exactly like a Fender. The customer went on to tell me that the electronics were amazing. I played the bass, I had to agree the electronics were great. However I know that once an electronic circuit is designed you can copy it exactly for less than \$10.00 each. I also like the way the bass played & felt. I just could not wrap myself around the price.

I did about 15 minutes of research and I was able to determine who builds the bodies, necks, bridge, tuners & pickups. My own production made machine made low end "Lowrider" model bass can be bought brand new for about \$2,700.00 cheaper. Coincidentally the components are all exactly the same. (With exception of his proprietary electronic circuit)

Now I'm not claiming my bass is better, I'm not claiming anything. I'm just trying to make a point about overpricing... (You No Longer Get What You Pay For !!! & That's A Cold Hard Fact)

We have in our inventory at least 2 Fender Basses with Sadowsky's \$250.00 electronics built in should we charge \$250.00 more or should we charge \$2,500.00 more (Think about it)

Ed Roman

More Deprogramming From Ed Roman

Please read what I have written below with an open mind

There Are 2 Major Clichi; 1/2's That Are No Longer True In The Guitar Business

1. You Get What You Pay For!!!!

It's painfully obvious to me or to anyone who is not intellectually challenged that today many large corporations use this tired old clich� to their financial advantage. They are constantly pricing guitars at extremely high prices, so that consumers will think they are actually handmade well built instruments.

I first learned this fact back in 1991, I was employed by Gibson Guitars. The president of Gibson, Henry Juszkiewicz made this statement to me. "The higher the price the better the guitar" "or at least that will be the customers perception".

This may have backfired a little on him, due to the fact that this artificial perception, that a production made guitar has to be so expensive, has made it possible for custom builders like, Myself, JET, Gledura, Jaros, Benedetto, McPherson, Dingwall, & Alembic to flourish. Simply because most intelligent people, would rather have a custom guitar. Especially if they could buy it for the same price or less than a machine made production instrument.

2. It's Just Too Good To Be True!!!!

That's another Bulls&%t Clich�, The Man & all the large corporations want to instill in your mind. (Don't you believe that for even one second !!!!!!!!)

A tribe isn't a tribe unless it has one Chief & many Indians.

The Chief is nothing without Indians!!

The question you must ask yourself your whole life is "Am I A Chief, Or Am I An Indian"

The Indian will believe the old "It's too good to be true" adage and go back to smoking his peace pipe. The Chief will just go for it. *There lies the inherent difference*.

Some people play *original music*, They are known as *innovators*, Some people play only *cover tunes*, In Vegas they are known as *Lounge Bands*.

Now that doesn't make these people bad people, But it doesn't make them Chief's either !!!! Hell. I like to play cover music myself. I do it for fun !!!

Ed Roman

06/17/05

Monkey See Monkey Do

The monkey will play the same guitar as all the other monkeys will !!!!

Many exotic tone woods are subject to ultra small & microscopic cracks in the wood. We cannot guarantee against this happening because we use so many varied species It is usually entirely unnecessary to repair anyway & almost invisible to the human eye.

What is Nato wood?

Nato is an abundantly available tree and is considered to be an economical alternative to Mahogany. It is commonly referred to as 'Eastern Mahogany' or 'Industrial Mahogany' because it shares tonal and hardness/build properties with Mahogany.

State Legislative Bill Actions (/news/100)

February 21, 2018

State tobacco-related legislative bills that have been acted on by a state legislative committee or state legislature are listed below alphabetically by state:

Colorado: Senate Bill 126, which modifies the definitions for "traditional large and premium cigars" to ensure that all traditional large and premium cigars are subject to the tobacco products excise tax of 40% of the manufacturer's list price, was referred to the House Business Affairs and Labor Committee on February 14, 2018.

Florida: House Bill 1029/Senate Bill 1288 raises the legal purchase age for tobacco and vapor products to 21, on Senate Rules Committee agenda for February 14, 2018.

Hawaii: House Bill 1636, which, increases the annual license fee for tobacco retailers

State Legislative Bill Introductions (/news/99)

February 21, 2018

State tobacco-related legislative bills that have been introduced in the past week are listed below alphabetically by state:

California: Assembly Bill 2308 prohibits the sale of filtered cigarettes.

Connecticut: House Bill 5095 increases the cigarette tax by \$1.00 per pack.

Iowa: House Bill 2339 increases the taxes on cigarettes from \$1.36 to \$2.86 per pack and on other tobacco products from 50% of the wholesale price to 67% of the wholesale price, imposes the latter tax on vaping products, and removes the \$0.50 cap on taxes on cigars.

Kentucky: House Bill 339 imposes a surtax on cigarettes of \$1.00 per 20-pack; on snuff of \$.51 per 1.5 ounces; on chewing tobacco of \$.51 per single unit/\$1.08 per half pound/\$1.75 per pound; on OTP (including e-cigarettes) of 40% of distributor sales price; provides for a floor tax.

New York: Assembly Bill 9790 requires a retailer to obtain a permit to sell vapor products.

West Virginia: House Bill 4537 raises the tax on cigarettes by \$.35 per pack and increases the tax on other tobacco products by 3.5%.

Wyoming: House Bill 0043, which increases the tax on cigarettes by \$1.00 per pack, increases the tax on OTP from 20% to 53.3% of the wholesale price, and increases the tax on moist snuff by \$1.00 per ounce, died to the failure to meet an action deadline.

State tobacco-related legislative bills that have been acted on by a state legislative committee or state legislature are listed below alphabetically by state:

Alaska: Senate Bill 63, which prohibits smoking and electronic cigarette use in enclosed areas of public places, passed the House Judiciary Committee on January 26, 2018.

Hawaii: House Bill 1636, which increases the annual license fee for tobacco retailers from \$2.50 to \$500.00, the tobacco tax on cigarettes and little cigars from \$3.20 per pack to \$4.50 per pack and the tax on other tobacco products (not including large cigars) from 70% to 80% of the wholesale price, passed the Health and Human Services Committee on January 24, 2018. House Bill 1907, which prohibits sales of tobacco products by the Internet or mail order, passed the House Committee on Health and Human Services with an amendment on January 30, 2018.

Indiana: House Bill 1380, which included a cigarette tax increase of \$2.00 per pack and an increase in the purchase age to 21, was amended to remove the...

State Legislative Bill Introductions (/news/97)

February 15, 2018

State tobacco-related legislative bills that have been introduced in the past week are listed below alphabetically by state:

Colorado: Senate Bill 126 defines "traditional large and premium cigars" to mean the following: any roll of tobacco that is (a) wrapped in 100% leaf tobacco; (b) is bunched with 100% tobacco filler; (c) does not contain a filter, tip, or nontobacco mouthpiece; (d) weighs at least six pounds per thousand; and (e) has 100% leaf tobacco binder and is hand rolled. Currently cigars are taxed under the tobacco products excise tax. This bill would ensure that all traditional large and premium cigars are subject to the tobacco products excise tax of 40% of the manufacturer's list price. Senate Bill 139 requires any retailer who sells cigarettes, tobacco products or vapor products to obtain a license and a retailer with more than one location would need to obtain a license for each location.

Hawaii: House Bill 2737 prohibits shipments of tobacco products to anyone other than a licensee and increases the annual tobacco retail permit fee from \$20 to \$50.

Idaho: Senate Bill 1255 increases the legal age to purchase tobacco and vapor products from 18 to 21 years of age. SB1255 also prohibits...

NATO Industry Outlook Seminar: Education at its Best (/news/93)

February 6, 2018

The NATO Industry Outlook Seminar held last week in Las Vegas in conjunction with the Tobacco Plus Expo Trade Show was attended by more than 160 retailers, wholesalers and manufacturers who were provided a Wall Street industry update by Nik Modi of RBC Capital Markets, a tobacco market trend analysis by Don Burke of Management Science Associates, and a local and state legislative update and FDA regulatory overview by NATO Deputy Executive Director Brian Carr and NATO Executive Director Tom Briant. A special thank you to Platinum Sponsor Altria Group Distribution Company, Gold Sponsor Swisher International, and a note of appreciation to Kretek International and the Tobacco Plus Expo Trade Show for all of the support to conduct the NATO Industry Outlook Seminar.

Kerri Donaghue, left, and Jack Hennessy relax in recliner seats at AMC Movie Theater in Braintree, Mass. (Boston Globe / Boston Globe via Getty Images)

The average price of a movie ticket rose to \$8.17 in 2014, the highest yearly average on record, according to The National Assn. of Theatre Owners.

The price was up less than half a percent from the \$8.13 average in 2013, NATO reported on Tuesday. However, the fourth quarter of 2014 saw a jump in price to \$8.30. The third quarter was also higher than usual, reflecting the box office success of surprise hit "Guardians of the Galaxy."

The average reflects a national average of theaters in big cities and small towns, and includes lower-priced matinees and children's prices. For example, the cost of an adult movie ticket for an evening showing at AMC Century City is \$14.49. By comparison, at AMC Oakview Plaza in Omaha, the cost of an adult movie ticket for an evening showing is \$6.73.

The increase comes on the heels off a box office slump. After a <u>shaky summer</u> and a fickle fall, the box office <u>reached an estimated</u> \$10.3 billion in 2014, down about 5.2% from 2013's record of \$10.9 billion.

V

The exhibition industry has struggled to lure in moviegoers with growing competition from home entertainment options such as Netflix, video-on-demand and video games. To counter the stagnation in attendance, theaters have added premium services such as extra-large screens, improved sound systems and in-theater dining.

But many analysts and others in the industry predict that 2015 could be a record year at the box office with a robust film slate.

Some highly anticipated films include
Universal Pictures' "Fifty Shades of Grey," an
adaptation of the popular romance novel by
E.L. James that will debut in February;
Marvel's superhero film "Avengers: Age of
Ultron," which comes out in May; and "Star
Wars: Episode VII — The Force Awakens,"
due out in December.

Already, Warner Bros.' "American Sniper" shattered box office records for January. The Oscar-nominated Clint Eastwood film has pulled in more than \$108 million since its limited Christmas Day release.

Chris Aronson, head of domestic distribution for 20th Century Fox, told The Times before the new year that he is "looking forward to having the industry reverse the declining attendance curve and have attendance actually go up in the domestic market."

nato wood - Google Search 3/9/18, 2:18 PM

Nato wood is a collective name for wood from Mora trees (the best-known species are Mora excelsa (Mora) and Mora gonggrijpii (Morabukea). This should not be confused with Nyatoh (an Asian hardwood from the Sapotaceae family with a very similar look and characteristic to Honduras Mahogany, though totally unrelated).

National Association of Theatre Owners

The **National Association of Theatre Owners (NATO)** is a trade organization based in the <u>United States</u> whose members are the owners of <u>movie theaters</u>. Most major theater <u>chains</u> are members, as are many independent theater operators; collectively, they account for the operation of over 32,000 motion picture screens in all 50 U.S. states and 81 other countries.

NATO was founded in 1965 by the merger of the largest movie theater trade organizations, the Theater Owners of America and the Allied States Association of Motion Picture Exhibitors.^[1]

The long-running official magazine of NATO is Boxoffice; between 2001 and 2007, they also published In Focus. [2]

History

As the motion picture industry became larger, movie production companies began consolidating and controlling distribution. The largest producer, Famous Players-Lasky, joined and later merged with the largest distributor, Paramount (eventually becoming Paramount Pictures), and together they began block-booking in 1917, forcing theaters to buy mediocre films to get the good ones. Theaters banded together to bargain for better pricing, with 26 of the largest combining into First National Exhibitors Circuit—which went on to become a producer and distributor in its own right, before being bought by Warner Bros. By 1921, Paramount already owned 300 theaters, and other producers were catching up. Studios soon contracted with each other to keep first-runs inside the affiliated network, using this access to coerce independents into selling out.

In 1921, the first predecessor of NATO was founded, the largely affiliated Motion Picture Theater Owners of America (MPTOA), soon followed by the independent Allied States Association of Motion Picture Exhibitors (Allied), Unaffiliated Independent Motion Picture Exhibitors of America, National Independent Theatre Exhibitors, and more, to demand better pricing and access to first-runs. Unlike the others, the MPTOA embraced affiliated theaters, and soon became the largest organization.

During World War II, many theaters joined the new War Activities Committee, after the war becoming the Theatre Activities Committee and soon American Theatre Association (ATA), which strongly supported the antitrust case against the Big Five. A plan to merge with MPTOA, which strongly supported the studios, ran into friction, with many affiliated theaters leaving the ATA over its stance; conversely Allied, the largest purely-independent group, refused to join over the presence of affiliates. The merger went ahead in 1947, minus affiliates of Loews, RKO, and Warner Bros., and they became the Theater Owners of America (TOA) with about 10,000 theaters. [3]

After divestiture in the fallout of the 1948 *Paramount* decision, many formerly-affiliated theaters ended up joining either TOA or Allied. During the post-war period, theater revenue collapsed as television became widespread, even as film rental became more expensive, and thousands of theaters closed, particularly in city centers hard hit by <u>suburban flight</u>.^[4] Finally, in 1966 TOA and Allied merged into the National Association of Theatre Owners, largely based on TOA's structure but headed by Marshall Fine, former Allied chairman.

The 1970s were difficult for NATO; although the blockbuster The Godfather revitalized theater-going and revenue, in 1975 a new National Independent Theatre Exhibitors (NITE) came together to challenge NATO, [5][6] eventually numbering almost a thousand theaters, and governance reforms were pushed by members as well. When the reforms stalled, the entire California and Illinois chapters pulled out in 1977, along with many small chains around the nation. After 1980, many of the requested reforms were finally implemented, including a full-time president and a full-time lobbyist in Washington, as well as moving its headquarters from New York to Los Angeles; by the end of the decade, NITE had folded back into NATO, leaving only one dominant organization. [5]

The 1980s saw a relaxation of antitrust regulation and subsequent purchasing of many chains by distributors and large conglomerates, including 120 theaters by Paramount and Warner;^[7] by the end of the decade, consolidation left the top 10 owners in control of 55 percent of the industry. In the 1990s, theater growth exploded, and by 1999, movie screens peaked at 36,448, the vast majority of which were affiliated with NATO.^[4]

Events

CinemaCon (formerly ShoWest)

As ShoWest, the convention was formerly one of four major worldwide annual events owned by the Film Group unit of <u>Nielsen Business Media</u> before being sold in 2011 to e5 Global Media and operated exclusively by NATO.

In now-renamed CinemaCon in 2011, the convention is NATO's only official convention of theater owners controlled by the organization itself. The first gathering took place March 2011 at <u>Caesars Palace</u> in <u>Las Vegas</u>, <u>Nevada</u>, with the second held April 23–26, 2012, at the same venue.^[8]

CinemaCon is now a standalone <u>movie theater</u> industry <u>trade show</u> or exposition originally established by NATO in <u>1975</u>, usually held in Las Vegas in March.^[9]

Other Conventions

The remaining Nielsen Media event properties include <u>CineEurope</u> held in <u>Barcelona</u>, Spain in June, CineAsia held in early December in varying locations throughout Southeast Asia, and ShowEast, held in late October or early November in the Southeastern United States, usually somewhere in the Miami-Dade area.

Apart from CinemaCon, as presented on the website for the Nielsen Media Film Group, hosted by <u>Nielsen Business</u> Media,

The Nielsen Film Group events — CineEurope, ShowEast and CineAsia — are the only <u>conventions</u> and <u>tradeshows</u> dedicated to the needs of the movie theatre industry worldwide. Our events bring together the key decision makers from every major, regional and independent theatre circuit with the major International Film Distributors, as well as the manufacturers of products, services and technologies for the movie theatre industry. All of our events include screenings of upcoming films, product reel presentations, educational seminars, special events and awards galas.^[9]

According to Rick Lyman, of <u>The New York Times</u>, all four events are "the largest and most important gathering of theatre operators" in the world, at which "the theatrical distribution business takes stock of its problems, which have been legion, and assesses its future, always through the rosiest glasses available."^[10]

American Movie Awards

In 1980, NATO initiated the American Movie Awards, held at the Wilshire Theater, Beverly Hills, California, and broadcast on NBC, with the winners selected based on voting by theater patrons. [11] Various legal difficulties prevented the awards from being presented in 1981, and the event was discontinued after the 1982 awards due to competition from other awards shows.

Telemark skiing - Wikipedia 3/9/18, 2:20 PM

WikipediA

Telemark skiing

Telemark skiing is a skiing technique that combines elements of Alpine and Nordic skiing. Telemark skiing is named after the Telemark region of Norway, where the discipline originated. Sondre Norheim is often credited for first demonstrating the turn in ski races, which included cross country, slalom and jumping, in Norway around 1868. Sondre Norheim also experimented with ski and binding design, introducing side cuts to skis and heel bindings (like a cable).

Telemark skiing was reborn in 1971 in the United States. Doug Buzzell, Craig Hall, Greg Dalbey, Jack Marcial and Rick Borcovec are credited with reintroducing the style after reading the book *Come Ski With Me* by <u>Stein Eriksen</u>. Telemark skiing gained popularity during the 1970s and 1980s. The appeal of Telemark skiing lies in access - long pieces of synthetic fabric,

Telemark ski racer executing Telemark's unique lunging or "free heel" turn.

known as skins, can be attached to the bottom of the skis to allow travel uphill. With the invention of light weight <u>alpine</u> touring (A.T.) skis however, telemark skiing has decreased in popularity.

Telemark skiing uses a specialized type of equipment. Generally, Telemark skiers use flexible Alpine skis with specially designed bindings that fix only the toe of the <u>ski boot</u> to the ski, thereby creating the "free heel". Oftentimes the heel is attached to the front of the binding by a hinged cable, which holds the ski boot firmly in the binding. These bindings are often non-releasable.^[1]

Telemark racing

Originally made popular as a mode of backcountry transportation, Telemark skiing is now a world cup sport focused on <u>carving</u>. At its core, the Telemark discipline combines elements of Alpine racing, Nordic skate skiing, and <u>ski jumping</u>. World Cup Telemark is offered in a number of race formats, including Classic, Sprint Classic, and Parallel Sprint. A typical Classic Telemark race involves a jump that must be landed in a lunged position, a series of gates, a skate section, and a 360 degree banking turn known as the reipeløkke.^[2]

Telemark Racing was governed by the *International Telemark Federation* (ITF) until 1995, when Telemark skiing was officially recognized by the *Federation International de Ski Telemark committee* (FIS). The first FIS Telemark World Championships were held at Hafjell, in Lillehammer, Norway.

Today, Telemark Racing is organized by FIS and by national sport committees such as the <u>United States Telemark Ski</u> Association (http://www.ustsa.org), and the British Telemark Ski Team (http://www.gbtelemark.co.uk).

Never mind the concerns about movie theaters suffering from declining appeal to Millennials, a shift of interest to home video, growing technology costs, or even the Justice Department's investigation of exclusive local clearance deals. The industry is doing fine, National Association of Theater Owners VP Patrick Corcoran told investors this morning at the Gabelli & Co. annual Movie & Entertainment Conference.

Statistics showing diminishing movie attendance by young adults often are skiewed because they depend on surveys conducted via landline phones. The mobile generation is "incredibly hard to reach."

Other research shows that Millennial attendance has been "growing by double digits for the last five years, and into the first quarter of this year," Corcoran says. What's more, "the movies they go to are the premium, higher ticket price movies."

The NATO representative also rejects the idea that theaters are too dependent on a handful of blockbusters.

"We had a lot of people who hadn't been to the movie theaters for a long time come back for *Star Wars*," he says. Many were surprised to see how much has changed — for example with digital projection and more sophisticated concessions. That will pay off because "moviegoing begets moviegoing."

Corcoran defended theaters' struggle to maintain their ability to exclusively offer new releases.

Netflix — which is producing films it simultaneously releases on its platform — "does the same thing," he says. When new episodes of its series *House of Cards* debut they are "not available on Hulu, DVD or pay TV."

Regarding the recent debate over a premium VOD service, The Screening Room, Corcoran says that it "got a lot of attention in the press but not a lot of traction in the industry itself." Supporters said that adding a home market for new films would encourage studios to produce more high quality films, and that would benefit theaters.

But Corcoran says that "the press to get to the home market is for the home market, not to save theatrical." As the DVD business declined, the home video business offers studios far less than theaters do when you take streaming services such as Netflix, straight-to-video releases, and TV series out of the equasion.

Even so, exhibition and studio execs are engaging in "face to face talks" to consider opportunities to open home video opportunities without encroaching on theaters.

The conversations are important because theater owners need to weigh the potential pay off of investments in new projection and audio technology. "We're head and shoulders ahead of the home and we want to keep that technological edge.," Corcoran says.

For now, theaters are focusing their investments in their premium, often large screen, venues. "You can test it out to see if the audience notices...Theater companies are going to continue to experiment."

To avoid violating antitrust laws, NATO can't become directly involved in the debate over efforts by large theater chains to negotiate clearance deals with studios — terms that would give an exhibitor exclusive access to major releases in a community. Small and independent theaters say that makes it too hard for them to compete.

Yet Corcoran says that DOJ's interest in the movie business "far outweighs the size of our industry. He adds that he trusts "it will go away very soon."

Humorous to me how the industry is so quick to look at a decline in theater attendance as a sign that the medium is fading and not, you know, that the movies they're churning out these days are getting crappier and crappier.

NATO of Calif./Nevada announces \$330,000 in scholarship awards

Aug 20, 2012

News

The National Association of Theatre Owners of California/Nevada announced the 2012 winners of its annual scholarship programs, with awards totaling \$330,000.

In support of graduate film students, the Association awarded \$40,000 each to the film schools at UCLA and USC to be divided among six deserving students at The UCLA School of Theater Film and Television, and five deserving students at the USC School of Cinema and Television.

"We take great pleasure in helping to encourage and support the next generation of filmmakers," stated Milton Moritz, president and CEO, NATO of California/Nevada. "They are our lifeblood and partners in our future, and we congratulate them all."

At UCLA, Fellowships in Film are being awarded to Brynach Day and Richard Parkin in Production/Directing; Dana Gills, Producers Program; Ben Kopit and Amy Michalik, Screenwriting; and Emezie Okorafor, Animation.

At USC, through the Fund for Student Support, awards are being presented to Joshua Berman in the Peter Stark Producing Program; Joseph Yeh in the John C. Hench Division of Animation and Digital Arts; Jeremy Masys in the Division of Writing for Screen and Television; and Emily Ferenbach and Victoria Rose in Film and Television Production.

The Association is also awarding 25 individual \$10,000 college scholarships through an annual contest open to field-level employees of member theatres. All entrants must have maintained a minimum 3.0 grade-point average, submitted an essay to be judged, and satisfied other eligibility requirements. The competition is also open to spouses and dependent children of management-level employees and home-office staff.

The scholarship recipients are:

Christina Cortese, Cinemark's Century Redwood 20 Downtown

Jaime Dao, Regal Holiday 6 Theatre

Anna Edwards, Tristone Cinemas' Terra Vista 6 Theatre

Candice Evenson, Cinema West, Livermore 13 Cinemas

Zachary Ficke, REG Edwards Aliso Viejo 20 + IMAX

Jose Gallegos, Landmark's The Landmark

Rachel Hastert, Sierra Cinemas' Sutton Cinemas

Cassandra Havens Rave Brentwood 14 Theatre, dependent

Matthew Hulley, REG Edwards Aliso Viejo 20 + IMAX

Katarina Lovric, Cinemark's Century 25 Union Landing

Jeff Carl Luerman, UltraStar's Galaxy 6 Theatre

Travis Marker, Fallon Theatres

Vivian Martin, AMC Orange 30 Theatre
Emilio Merino, Muvico 14 Thousand Oaks
Kevin Monson, REG Edwards San Marcos 18 Theatre
Parisa Movahedi, REG Edwards Calabasas Stadium 6
Crystal Powell, Fallon Theatres
Claudia Reyes, Landmark's The Landmark
Rene Rusconi, Regal Laguna Village 12 Theatre
Felipe Sepulveda, REG Edwards Garden Grove Stadium 16
Cyrena Shirley, Regal's Palms Springs 9 Theatre
Nicholas Stalder, Coming Attractions Mt. Shasta Cinema
Jonathan Tavasti, Pacific's Lakewood Center 16 Theatre
Kathleen Thornber, Ultrastar Mission Valley
Jessica Wong, Syufy Enterprises Corporate, dependent

"We're very pleased that we are able to help ease the financial burden for all of these students, some of whom may have felt that college might otherwise have been beyond their reach," added Moritz.

PRESS RELEASE

The National Association of Theatre Owners of California/Nevada has awarded \$250,000 in scholarships to 26 employees of the Association's member theatres to be used for post-secondary education or vocational school; it was announced by president and CEO Milton Moritz. With the awarding of this year's scholarships, the Association will have presented a total of \$2,670,000 to 409 recipients over the 21 years since the program began.

"We are very proud of the Association's Scholarship Program, and the opportunities it has afforded so many deserving young men and women," remarked Mr. Moritz. "The value of continuing education cannot be overstated. That we are able to lend encouragement and give a leg up to those willing to work hard and seeking to better themselves is extremely satisfying for all of our members."

The scholarship program is one of the many benefits that are provided to employees of companies that are a member of NATO of California/Nevada and work in a California or Nevada theatre. The merit based scholarship program is available to eligible theatre level employees, general managers and dependent children,

Mamma Mia: Here We Go Again! (/movie/31765/mamma-mia-here- we-go-again!)	17,677

See Complete Chart (/twitter/today)

winning selections is based on academic standing, a personal statement about themselves, their community service, goals and an essay.

The winners of this year's scholarship competition are:

Ramin Afshari	AMC Theatres
Demi Arnold	ArcLight Cinemas
Michele Bagshaw	Cinemark USA
Nicole Barbeau	Krikorian Premiere Theatres
Cassidy Clark	Regal Entertainment Group
Jack Gerstein	Cinema West
Daisy Gutierrez	AMC Theatres
Kyndra Holloway	Galaxy Theatres
Ethan Jones	Paradise Cinemas
Daryn Link	IMAX Corporation
Cooper McAnelly	Cinelux Theatres
Morgan Meyer	Cinemark
Joanna Mrsich	AMC Theatres
Jessenia Oertel	Regal Entertainment Group
Deana Plascencia	AMC Theatres
Byron Rackow	ArcLight Cinemas
Felipe Ramirez	Maya Cinemas
Leandre Ravatt	Galaxy Theatres
Andrea Rivas Iraheta	Cinemark
Stephanie Schlagel	Regal Entertainment Group
Rebecca Shults	Regal Entertainment Group
Suzanne Smith	Reading International
Tamir Weinstein	Cinelux Theatres
Kyara Williams	Cinemark
Omar Yamak	Regal Entertainnment Group
Jacob Young	Krikorian Premiere Theatres

In addition to the Scholarship Program for the Association's member theatres' employees, \$50,000 in grants are also awarded annually to film students at both the UCLA School of Theater, Film and Television, and the USC School of Cinematic Arts.

Converse Students Earn Top Awards at International Model NATO

THURSDAY, MARCH 2, 2017

Warning: Information you find on this page may be outdated or incorrect.

At International Model NATO, held in Washington, DC, Converse competes with top American universities from across the nation, and nine European and Canadian universities.

Garnering top awards in every committee and in most cases by both Converse delegations, Converse compiled one of its more impressive performances at the 2017 Model.

Converse's France delegation was named Outstanding Delegation and the College's Slovenia delegation earned honors as Distinguished Delegation. Award winners for France were Natalie Southgate in the North Atlantic Council (NAC); and the teams of Danielle Fandre and Tinsley Burris-Henry in the Political Committee; Melissa Brock and Rachel Hopp in the Military Committee; Laura Gill and Verity Grupe (both freshmen) in the Partnership and Cooperative Security Committee; and Kathleen Langbehn and Tiffani Hagan in the Security Concerns Committee. On the Slovenia delegation, awards went to Grace Frazor in the North Atlantic Council; and the teams of Abigail Hill and Jamie Means in the Military Committee; Claudia Coffin and Sabrina Greene in the Partnership and Cooperative Security Committee; Melissa Rickenbaker and Jacqueline Torres in the Nuclear Committee; and Alexis Turner and Errin Baylis in the Security Concerns Committee.

"Two achievements are particularly notable," commented Model NATO advisor Dr. Joe P. Dunn. "Both Converse delegates winning in the NAC is remarkable because all schools put their single best delegates on this committee, and it is always a challenging feat to win an award there; this year we registered two. Also while all the other committee awards are

voted by their peers, the faculty choses one person (sometimes a second one) in each committee whom they believe provided the best leadership to the success of the committee. This often goes to a lower profile delegate who works behind the scenes. Besides being voted as the Outstanding Delegation in the Political Committee by their peers for their high profile performance, the faculty chose both Danielle Fandre and Tinsley Burris-Henry for the Leadership Award."

Converse provides students each year to serve as the Secretariat, which runs the entire Model. Sidney Jones served as Secretary General and Carson McCallum served as Assistant Secretary General and Chair of NAC. Emily Holbert and Jessica Morgan served as chairs and the faculty selected Jayda Means as the Outstanding Chair. "Catherine Parler '16, who had served as Chief of Staff for three years for the Model, is living in Washington and was recruited to return to perform this invaluable role. Replacing her experience and expertise will be one of our largest challenges next year," said Dunn.

Theaters Are Fighting With Disney Over 'Avengers: Age of Ultron'

Other

Posted on Tuesday, May 5th, 2015 by Angie Han

Avengers: Age of **Ultron** is littered with epic fight scenes, but some of the biggest battles involving the all-star superheroes are taking place offscreen. Theater owners are reportedly furious about the new conditions being imposed by Disney on cinemas showing the new Marvel feature. If the studio has its way, the theaters complain, ticket prices could go up for all moviegoers.

Learn all about the Avengers 2 theater dispute after the jump.

According to the <u>Wall Street Journal</u>, the National Association of Theater Owners (NATO) has written to Disney about the "avalanche of complaints, concerns and fears" it has received from members over the new policies required by the studio.

Among other things, Disney demanded theaters stop matinee screenings of *Avengers: Age of Ultron* at 5 PM. It also wants to set the national average ticket price as the minimum on which it'll split box office revenue — meaning that cinemas won't make as much money off of *Avengers: Age of Ultron* if they don't meet the national average ticket price.

Disney has the leverage to make such demands because its films are phenomenally successful. *Avengers: Age of Ultron*'s \$188 million domestic opening is the second highest in history, behind only the first *Avengers* movie (\$207 million). Besides the Marvel movies, Disney also distributes the *Star Wars* and Pixar movies, as well as animated features like *Frozen* and live-action fairy tales like *Cinderella*.

NATO complained that using the national average ticket price as a minimum standard raise prices for audiences in lower-income or lower-priced areas. Moreover, it argued such a move would begin "a cycle of price increases [that] may constitute illegal vertical price fixing under state and federal antitrust laws."

NATO's pushback is proving somewhat successful. In response to the outcry, the studio has softened its approach. Disney has backed down on the matinee cutoff, and is "willing to be flexible" about the minimum ticket price for theaters in markets where the average admission is below the national average.

Even so, NATO worries others might follow Disney's example. Studios tend to get the best terms on their biggest films. For example, Disney will get about 60% of the domestic box office revenue for *Avengers: Age of Ultron*, compared to the industry average of 50%. You may recall that that number was settled upon after a bitter fight

NATO White Helmets Denounced by Swedish Doctors

Editor / April 22, 2017

#WhiteHelmets denounced by Swedish doctors for medical malpractice and misuse of children as props for propaganda. The first elected board of SWEDHR was composed by Leif Elinder, Marcello Ferrada de Noli (Chairman), Martin Gelin, Alberto Gutierrez, Ove B. Johansson, Lena Oske, Armando Popa, Anders Romelsjö (Vice-Chairman), Marita Troye-Blomberg, and Luz Varela. In 2015 Ferrada de Noli founded with a group of European academics and publishers the magazine online The Indicter, being elected editor-in-chief. Swedish Professors & Doctors For Human Rights (SWEDHR) is an independent, non-profit, non-partisan, non-governmental organization engaged in the research and reporting on the effects of war-crimes, torture and human-rights transgressions on civilian populations or on individuals.

Petition · Ole von Uexkull: Retract the Award Given to the NATO White Helmets · Change.org	3/9/18, 2:30 PM
Retract the Award Given to NATO's White Helmets	3/9/16, 2:30 FM
This petition had 821 supporters	

<u>Syria Solidarity Movement - International</u> started this petition to <u>Executive Director Right Livelihood</u> <u>Foundation Ole von Uexkull</u> and 2 others

We call on the Right Livelihood Foundation to retract the award given to the "White Helmets" for the following reasons:

- * The White Helmets, also called Syria Civil Defence, are not who they claim to be. The group is not Syrian; it was created with USA/UK funding under the supervision of a British military contractor in 2013 in Turkey.
- * The name "Syria Civil Defence" was stolen from the legitimate Syrian organization of the same name. The authentic Syria Civil Defence was founded in 1953 and is a founding member of the International Civil Defense Organization (1958).
- * The name "White Helmets" was inappropriately taken from the legitimate Argentinian relief organization Cascos Blancos / White Helmets. In 2014, Cascos Blancos / White Helmets was honored at the United Nations for 20 years of international humanitarian assistance.
- * The NATO White Helmets are primarily a media campaign to support the 'regime change' goals of the USA and allies. After being founded by security contractor James LeMesurier, the group was "branded" as the White Helmets in 2014 by a marketing company called "The Syria Campaign" managed out of New York by non-Syrians such as Anna Nolan. "The Syria Campaign" was itself "incubated" by another marketing company named "Purpose".
- * The White Helmets claim to be "neutral, impartial and humanitarian" and to "serve all the people of Syria" is untrue. In reality, they only work in areas controlled by the violent opposition, primarily terrorists associated with Nusra/AlQaeda (recently renamed Jabhat Fath al Sham).
- * The White Helmets claim to be unarmed is untrue. There are photos which show their members carrying arms and celebrating Nusra/AlQaeda military victories.
- * The White Helmets act as cleanup squad removing the bodies of Syrian civilians executed by the terrorists.
- * The White Helmets claim to be apolitical and non-aligned is untrue. In reality they actively promote and lobby for US/NATO intervention in violation of the norms of authentic humanitarian work.
- * The Right Livelihood description that "Syria Civil Defence" saved over 60,000 people and "support in the provision of medical services to nearly 7 million people" is untrue. In reality the zones controlled by terrorists in Syria have few civilians remaining. That is why we see "cat" video/media stunts featuring the White Helmets.
- * The NATO White Helmets actually undermine and detract from the work of authentic organizations such as the REAL Syria Civil Defense and Syrian Arab Red Crescent.
- * The recent Neflix movie about the White Helmets is not a documentary; it is a self promotional advertisement. The directors never set foot in Syria. The Syrian video, real or staged, was provided by the

White Helmets themselves. From the beginning scenes showing a White Helmet actor telling his little boy not to give mommy a hard time until the end, the video is contrived and manipulative. The video was produced by a commercial marketing company Violet Films/Ultra Violet Consulting which advertises its services as "social media management", "crowd building" and "campaign implementation".

In conclusion, the NATO White Helmets do not deserve the Right Livelihood Award. The presentation of this award discredits the Right Livelihood Foundation and past deserving award winners. More importantly, it does a profound disservice by rewarding a fraudulent organization which gives a "feel good" image while manipulating public sentiment and actually promoting war.

We call on leaders of the Right Livelihood Foundation to investigate the assertions above and, when they are determined to be accurate, retract the Right Livelihood Award from the White Helmets.

White Helmet "Witness" - story full of contradictions

In 36 hours 200 people have signed this petition! Please help inform more people about the White Helmet hoax. Meanwhile, White Helmets have moved to front stage in the propaganda war. See the following analysis exposing contradictions and inconsistencies in reports on the humanitarian convoy attack in Aleppo. http://www.moonofalabama.org/2016/09/syria-conflicting-reports-dubious-witnesses-challenge-convoy-attack-case-.html Thanks to Corey Morningstar at Wrong Kind of Green for brilliant graphic below.

Reasons for signing

Brian Souter-1 year ago

White helmets is a group that Affiliates with algaeda and includes members who are algaeda. It operates only in algaeda areas, and looks like a promotional stunt than real first responders. They Claim not to be funded by any govt but take money from USAID, U.K. French govts. There is a real Syria civil defence, white helmets have just purloined their title

My extensive investigation into this group suggests the facts of this petition are correct. This group deserves no award and most likely deserves to be exposed and disbanded.

NATIONAL ASSOCIATION OF TOBACCO OUTLETS' SHOW ATTENDEES WILL GIVE BACK TO LAS VEGAS COMMUNITY

December 31, 2012

 \mathbf{A}

s part of National Association of Tobacco Outlet's 12th Anniversary and Trade Show in Las Vegas, the organization will launch the first Meetings with a Mission (MWM) event.

The MWM event is a community engagement initiative for attendees to serve at the Las Vegas Rescue Mission April 22, the first day of the show, which runs through April 24.

NATO Show attendees registered for the NATO MWM event will serve for a half-day at the Las Vegas Rescue Mission in the areas of preparing and serving meals, assembling hygiene kits and performing light property maintenance.

On the NATO MWM Web site, those who are unable to attend have the ability to opt to donate toiletries for the hygiene kits or make a monetary donation to the Rescue Mission.

"The NATO Meetings with a Mission event is an effort to create an environment of connections--NATO with the city of Las Vegas, NATO attendees with their peers and ultimately, attendees with those in need in the community," said NATO president Andy Kerstein.

He added, "Beyond a standard fundraising event, NATO's Meetings with a Mission allows for hands-on interactions to make a positive impact in the host-community of Las Vegas. It also fosters a spirit of giving back that our attendees can take back with them to their respective businesses and communities."

The Las Vegas Rescue Mission, provides redemption, recovery and re-entry to the homeless, addicted and those in need through direct services of food, shelter, clothing and restorative programs.

The Rescue Mission is working to serve the metro area of Las Vegas that is ranked with the fourth highest rate of homelessness in the nation.

Robert Brunner, executive director for the Las Vegas Rescue Mission, said it is partnerships, such as this with NATO, which the Rescue Mission truly values.

"A true mutually beneficial relationship is fostered when both sides of the serving are engaged,"
Brunner said. "Here at the Rescue Mission, we seek to not only make an impact in the thousands of
lives we are serving daily, but we hope to make an impact on those who come to serve with us."

NATO board member Andrea Myers added, "We are thrilled to launch this brand new initiative for NATO and look forward to developing our relationship with the Las Vegas Rescue Mission to grow the MWM program in the years to come. We challenge our retailers, manufacturers and distributors to roll up their sleeves and engage in the community for a more meaningful experience in Las Vegas this year."

Review

"The ITE Morphs into NATO"

We all have been to a trade show or something similar at least once in our life. For me, one of my favorites things to do is get together with all of my friends who enjoy great tobacco and who know a lot about it at the

spring show once known as the **ITE** (International Tobacco Expo). The ITE is no more but it has been replaced by the **NATO** (National Association of Tobacco Outlets) Convention. It is held at the same time of year (March) and like the ITE, it is held in Las Vegas, this time and next, at the **RIO Hotel**. Much controversy inside the industry arose from the transformation of ITE to NATO but all of that is past us now and details of the transition are really of little import today. We will miss the ITE, but this year's NATO show appeared to be a great success, thanks to Sharon Wayne and her able staff. Many of the same people who put together the ITE are on board, including Sharon, for this new venue and brought with them a great deal of experience in these kinds of events. Of all the annual tobacco

shows, the old ITE and now the new NATO seems to most friendly to the RYO/MYO environment. Consequently, a large percentage of the exhibitors are from this industry. This event is a great opportunity for us to have a face-to-face with all of the folks we talk with on a regular basis and to look at their newest products. It is also an opportune time to meet all of the new players who are fast emerging as serious contenders in this dynamically evolving industry. Like most secular industry trade shows, these events are not open to the general public. The attendees are for the most part retailers, distributors and others partially or wholly involved in the sale of tobacco products. And of course folks who write about the industry like RYO Magazine. Because the general public is not in attendance we feel it important to share some insight as to what goes on during these conventions, with our general readership.

The flavor of these and other shows would be pretty dry were one not interested in the product being highlighted, in this case tobacco. We are, of course, and so we have a fascinating time. The setting of the RIO and Las Vegas in whole do offer the opportunity for other diversions if you like the Vegas experience. I am not a big fan of all the glitz and glamour as I am more of a cut-offs & T-shirt kind of guy and I am nothing short of

being an albatross at the tables or slots. Nonetheless we always have a great time at these events, the food is superb, you can smoke almost anywhere you want and obviously with the samples available at these shows, you can sample all of the best.

There are some really remarkable people involved in this industry. They run the gamut from extremely suave and elegant folks to some real down home personalities. Characters id you will. And sometimes it is

hard to tell the difference. One of our favorites and a good friend is Peter Stokkebye. He, being now semi-retired, does not make all of the shows but he always makes this one. He is, without a doubt, the most singularly recognized icon in the tobacco business period. He represents the third generation in a fourth generation tobacco family. And he is a hoot to be with. The folks that work at Stokkebye are a diverse group of professionals who are dedicated to excellence and are truly nice people. The Stokkebye booth always attracts a lot of attention, especially when Peter is around. At left you can see our associate editor Linda Roberts undergoing her annual molesting by the master, Peter Stokkebye and Brian Levine. Brian and Peter are polar opposites or so one might think with probably 35 years separating them, but

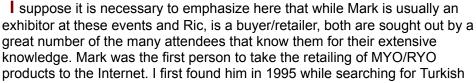

the truth is they both are funny as hell and you have to constantly keep an eye on them or you will be the victim of a prank of one sort or another. Throw in Morgan Snead, whose leisurely southern drawl can lull you off guard and you are in for a E ride each time one gets together with this respected group. You can get some idea from the picture above of just how massive this show is, with hundreds of exhibitors filling several convention areas of the beautiful RIO hotel. The NATO Expo is second in size only to the RTDA (Retail Tobacco Dealers Association) show held in July.

Introduces a unique new blend

At right, Mark Ryan from D&R Tobacco and Ric Glaubinger from RYO Tobacco (Mark is on the right with Ric left) are pioneers in their own right representing first generation mastery in the specific area of Roll Your Own and Make Your Own retail. Few people on the planet have the accumulated knowledge that these two have regarding the packaging and selling of this industry's product. Mark's company is located right at the center of where much of the finest tobacco is grown. (North Carolina) and is an expert on the tobacco plant. Ric. from

Austin, has an international knowledge of the tobacco trade that is astounding. Though their companies compete, like many others in this business, they spend a lot of time generously sharing information, all to the ultimate benefit of their customers. This kind of business relationship is yet another reason for my passion about this industry. Both of these guys approach the business and these conventions with gusto and are not the kind of people you want to be around if you want to have a restful few days.

tobacco and injectors and that was three years after he opened his online store. He remains an authority on the web based tobacco business and his company at www.cigarettetobacco.com has customer service ratings that are astounding. Ric enjoys extremely high customer satisfaction ratings as well and has quite a number of other online businesses, some tobacco related, like SnuffShop.com, LittleCigars.com and others as well as an online shaving supply shop. You can see all of his enterprises when you go to www.ryotobacco.com. Now before going any further it is important to note that it was a terribly windy day in Vegas so most of us looked pretty haggard and wind blown by the time we got into the arena and I began the camera action. Ric looked like he had been testing electrical outlets with his tongue and Mark's hair was so flattened down by the wind that his head appeared in these photos much too small for his svelte, tuxedo wrapped body. And those that

know me are aware of the fact that, under normal circumstances, I look like a bronze god.

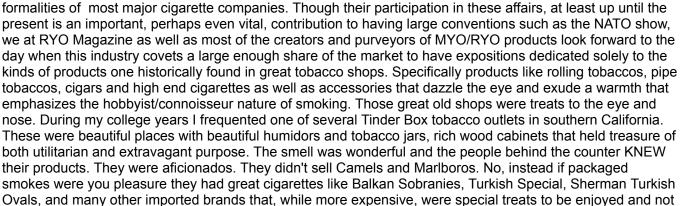

So for reference sake, I share with you my image with Mark at left and with two relatively new forces in the MYO/RYO business, Bill and Brian from H&R Tobacco at right. H&R is the kind of business that can greatly benefit from exposure at conventions like NATO. They have a fine line of tobacco products

and fit right in with the image that the RYO/MYO is known for. Low key advertising and promotions backed up with great product and service that typifies this industry is in sharp a contrast to the mass marketing techniques that got the Big Cigarette companies in trouble over the years. When they are not trout fishing the Snake River in Lewiston, Idaho, they are servicing their growing base of

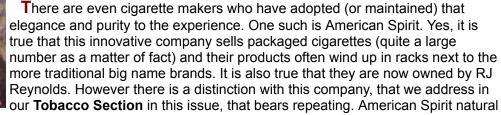

retail and distribution outlets. A class act indeed.

There a literally hundreds of folks I look forward to seeing each year at this particular convention. The spirit of those involved in this sector of the tobacco industry is definitely more down to earth than the corporate driven

consumed in mass quantities. There are still shops like that in the US but there number shave diminished greatly. When you find one you will recognize it immediately. That is the atmosphere that is created by many of the exhibitors at

NATO that focus on the Roll Your Own Market.

tobacco cigarettes, some of which are among the best in the world for a packaged smoke. But they also make rolling tobacco, and some pretty good ones at that. Their US Grown blend can stand beside many of the greats of Europe in its quality of cut and flavor. The company is indeed in control of its own destiny despite its new ownership by RJ Reynolds. They introduce new blends in the same manner the rolling industry has done throughout its history and they attract a warm and interesting group of folks to represent them. One of our favorite people in this business is and has been Sherrie Derrick. We first met Sherrie when she was working with Peter Stokkebye. She left there to add her talents to Santa Fe (American Spirit) a couple of years ago. We know she is missed at Stokkebye and American Spirit is fortunate to have her experience, taste, and professional demeanor working in their camp. She and Linda, our associate editor, are especially great friends

and we always have interesting conversations as to the future of Make Your Own and now especially how the two market sectors (packaged and make your own) can provide a singularly effective and honorable approach

to marketing tobacco products.

Of course tobacco is not the only product that one looks at at these conventions. In fact it is not even the majority of things. The tobacco business from the retailers point of view is accessory driven. With state

and federal taxes even on rolling tobacco products at an all time high, most stores are lucky to see a 30% return on their investment in tobacco inventory. Accessories like injectors,

papers, tubes, cases, humidors, and certain eye-catching point of sale items are a big hit at these shows and generate the added profits necessary to keep most tobacco outlets afloat. And some of these "toys" if you will, are really fun to play with and look at. They range from the truly wacky, **Billy Bob Teeth**, (www.billybobteeth.org) shown above to many other novelty items like Shot Gun Shell Torch Lighters from Csonka (www.csonka.com). There are literally thousands of these fun and surprisingly profitable items on display at an Expo. Of course there are the ones that are far more practical like injectors, pipe tools, pipes themselves, humidors. lighters and the like, but one of the most innovative and timely items to show up is the Csonka Smoker Cloaker. The fact that this device works, and it really does, is only part of the story. It is really an Ozone (O3) generator not a filtration system. By generating the negative ions that are associated with

ozone, smoke and other odor producing particles are cleansed from the air as they attach to the negative ions and fall out. There is a slight ozone-like odor but it is soon unnoticeable and the unit after only a very few minutes of operation gets rid of ALL smoke odor. Why is this so important.

Well to begin with, we as outdoor smokers are such because we really don't like the smell of stales tobacco smoke. I enjoy the flavor of fresh tobacco smoke and smoking out of doors, in my opinion, increases the enjoyment substantially. However, certain environmental factors can make this difficult, especially temperature, and air pollution. There is a bigger

issue. In some states it is becoming illegal to smoke in your own residence (an apartment for instance) if the smoke is noticeable to your neighbors. This new invasion even includes certain single family residences where house are very close together. It will eventually come down to smoking regulations imposed on people who are in the privacy of their own home, whether or not the smoke is actually reaching your neighbor. The fact that they know you smoke may be enough for a complaint to be filed and a fine imposed. This is not a science fiction, big brother, 1984 scenario. It is happening already and will probably get worse. The key to this whole problem is the smell of cigarette smoke. Few people complain about a nice pipe tobacco, while cigars are often taboo even in establishments where smoking is allowed. This little device completely rids the air of the "smell" of tobacco burning. I have not seen anything yet that compares in its ability to do this rather complex thing. Not expensive filtration systems, nor exhaust fans, or even smoke "arrestor" which zap the particle and cause them to like wise fall to the floor or into a filter. Even these system combined (which is a very expensive solution indeed) are not as effective in eliminating odors as the Csonka Smoker Cloaker. And it works with food odors like garlic, fish and onions as well, these unite usually retail in the \$200+ dollar range for the baseball sized Original design which I tested for a month, and while this may seem rather extravagant, if indoor smoke odor is a problem, there is no other solution we have found other than to stop smoking indoors. This one comes with both an AC (wall wart) adaptor as well as a DC for you auto or RV. There are several other styles and price ranges for various sized spaces. The small one pictured above we tried is supposedly good for 1000 square feet. We tested than in an office about 3/4 that size and it did the job very quickly (less than 5 minutes for cigarettes and about 10minutes for really robust cigar smoke). These things are the real deal and we recommend them as a bargain even at the price. Hell, it sure beats moving because yopur neighbors complain about your smoke.

Speaking of moving, the **SmoKit** is another Csonka innovation that drew a lot of attention at the show. It is a multi-function kit for holding and carring for your tobacco with a clock thrown in for grins. For the smoker on

the go, the case holds both King-Size and 100 mms (depending on which direction you line them up), and has a very functional clip that holds your smokes (and the tobacco in your sticks) in place far better than the spring loaded kind that comes with most cases. There is a humidifier button that you fill with the little squeeze bottle you can see at the right side of the case. Below the bottle in the photo is the portable ashtray that fits neatly in the slot where the name Csonka SmoKit appears. All of this in a luxuriously padded leather case that snaps shut and actually stays that way until you want it to open. While it is a little bigger than a normal case and won't fit in most shirt pockets, it fits well in coat pockets, brief cases and purses. Very well thought out, this little piece of luxury is quite affordable, no more than most descent cigarette cases and the clock actually keeps accurate time. Another bit of practical, well engineered fun trom Csonka. www.csonka.com

No tobacco show would be complete with out all of the great names in the rolling industry. Names like Zig-Zag, Lane LTD, Republic Tobacco, Gizeh, and many smaller organizations whose products we review frequently. There are smaller entities like F&K Cigar (Charles Fairmorn) and the much larger Arango Cigar

(Jason, and Sportsman Vanilla Rolling tobacco) who produce, or distribute very special products and don't always get the mainstream attention they deserve. There are very large distributors like HBI and Robert Burton Associates and HJ Bailey. Of all of these, Clinton Tube (CTC) probably has had more impact on the MYO experience than any other company. They make the Supermatic and Excel lines of injectors as well as a large number of tubes under their name and for many others as well. Without the table top crank injectors like the Supermatic, MYO would remain a small niche. Once they try a table top injector like these few people return to packaged brands. We speak often of Arnold, Gary, and Stephane (at right) with whom we have very warm and productive friendships. A new

face (I don't have a picture, the lens was steamed up for some reason), Tamara, Stephane's highly (scary) intelligent and drop-dead gorgeous new assistant made her debut at the show. But, Anthony Liem (at left) is THE one many of you will speak to if you need help with a machine or with a tube order. He manages CTC's New York facility and is one of the sweetest people you will ever meet. I could not resist putting his picture here as too many people have never seen this gracious individual. The smile on his face is authentic. It is permanent and infectious. And Anthony does well to keep the rest of us in line after each show when we begin to haunt the drinking establishments and offend (good naturedly, in our opinion, of course) most of the staff. He took videos of us on his nasty little dvcam this year while we were partying and it is on his good nature alone that we trust we need not worry about blackmail at some later date.

At each show there are new contenders in the MYO/RYO world and that is part of what makes the Expo environment exciting. There are hundreds of companies out there busting their tails and risking serious venture capital to bring the consumer new and better products in the MYO/RYO category. We thank them in person and you should thank them by purchasing their products even if you have not heard of them or tried them before. Remember the MYO/RYO philosophy is one of adventure and experimentation.

With that in mind the possibilities are endless for finding that perfect smoking experience. It is a fact that as people enjoy the taste of great tobaccos packed fresh into a high quality tube, their smoking becomes less of a habit and more of a controllable hobby where each stick is savored and overall consumption is reduced. We hope our constant reminders of the value of moderation is appreciated. We and many of our readers have found an exceptional way to enjoy tobacco as it was intended and we hope all of you that smoke will share the same experience. If it should so

happen that you get an invitation to go to one of these shows (by your tobacco shop) or if you are a retailer and have not been to one, you really owe it to yourself to make the trip. Vegas is beautiful in the spring and you will be amazed at how much there is to see at the NATO Expo each year. You can visit their website at www.natoexpo.com

Until next time, enjoy and share.

EDITOR'S NOTE: These reviews are solely for the convenience of people of legal age who already smoke, are trying to cut down on smoking, wish to spend less money on their smoking, want to roll their own cigarettes from high quality tobacco, and, in general, wish to have a far more satisfying, and economical smoking experience when compared with smoking pre-manufactured cigarettes. We, in no way, encourage people to smoke. Further, we prescribe to a sane, more logical approach to smoking that involves common sense as to quantity coupled with a strong desire to manage the habit until it becomes an occasional, freely chosen, diversion, that can be fully enjoyed with minimal health risks. Finally, we strongly encourage those who do smoke to take it outdoors, or to appropriate environments where tobacco can be enjoyed away from those who do not smoke, not especially children. We do not sell tobacco or related products from this site; We distribute information about our perceptions of the quality of what is available and where it can be obtained. If you are under 18, it is illegal to buy tobacco and you should immediately exit this site. If you do not smoke, it would seem illogical to start.

Odds & Ends From 2016 NATO Show

By Melissa Kress, Convenience Store News - 04/25/2016

LAS VEGAS — The National Association of Tobacco Outlets (NATO) held its fifth-annual trade show last week in Las Vegas. The 2016 NATO Show was also the last, as the association sharpens its focus on legislative and regulatory issues across the United States, but the event was chock full of insights, tidbits and product information for all tobacco retailers, including convenience stores.

According to Bonnie Herzog, managing director of tobacco, beverage and convenience store research at Wells Fargo Securities LLC, the numbers continue to highlight the strength of Reynolds American Inc.'s Natural American Spirit (NAS) brand in the super premium cigarette segment. In the firm's Tobacco Talk surveys, retailers indicate they are anticipating The Altria Group Inc. and its operating company Philip Morris USA will enter the segment, either through "a tuckedin acquisition" or organically. According to Herzog, NAS is blazing a trail and Altria is taking notice.

Vaping for the Ages

Management Science Associates Inc. (MSA) took the pulse of vape shop owners and found that e-vapor products are not just for millennials. Don Burke, senior vice president, shared the results of the MSA survey of vape shop owners, which revealed that 88 percent of owners said consumers aged 21 to 30 are important to their business, and 92

percent said 31-to 40-year-olds are important. However, the percentages do not fall off as age increases. In fact, 53 percent of vape shop owners said consumers older than age 60 are important to their business. "It really speaks to the strength of the category," Burke noted.

You Know Best

Everyone has an opinion — some with facts and figures to back them up — on how to manage the e-vapor segment. But Chris Beaulier, director of retail operations for Cigaret Shopper in Brewer, Maine, said only the operator can know the right answer for their business. Whether they're the owner of a convenience store, tobacco outlet or vape shop, a retailer needs to do their own homework. "Research for future hot products, but at the same time don't fall in love with your inventory," he said, adding that retailers still need to offer traditional cigalikes because there are still customers looking for them.

Redefining Dual Use

When you talk dual use in the tobacco category, many people think of adult tobacco consumers switching between combustible cigarettes and electronic cigarettes, depending on the occasion. Yet another form of dual use is emerging in the e-vapor category. As Gal Cohen, head of scientific and regulatory affairs at PAX Labs Inc., explained, the company's JUUL presents an opportunity for vapers to vape in situations where using the larger mods/tanks are not possible — like in travel. JUUL has become a crossover product, available in roughly 11,000 convenience stores and 10 percent of all vape shops in the United States, reported Marty Young, director of strategic accounts at PAX Labs.

Meeting Barriers Head On

Boulder International Inc. has been in the market with its Aspen Air and Aspen Slim vapor products. Now, the company is ready to take the wrappers off its latest vapor product: the Boulder Rock vapor pen. The

SUPPLIERS & WHOLESALERS (/SUPPLIERS-WHOLESALERS) EVENTS & WEBCASTS (/EVENTS-WEBCASTS)

challenges that the e-vapor category faces in the convenience channel: ease and speed of transaction, and price point. The Rock has only two moving parts — making it a simpler vapor product for store associates to educate consumers about — and it has an attractive price for c-store shoppers, the company noted. The Rock will be hitting the channel in June.

The 2016 NATO Show took place April 19-21 at Paris Las Vegas.

<u>Fast Review: Comacho Coroillo</u> <u>Robusto</u>

Fast Review: Gran Habano Vintage 2002 466 July 31, 2015, Minneapolis, MN: Thomas Briant, Executive Director, National Association of Tobacco Outlets (NATO), announced the launch of the 2016 NATO Show website, www.NATOShow.com. "The NATO Show website has been updated with new navigation and backgrounds, making it easier for our members, exhibitors, and attendees to find information about the 2016 NATO Show, which will be held on April 19-21, 2016." Thomas Briant, NATO Executive Director

The site will be continuously updated with information as it becomes available. "For instance", Briant commented, "while plans are in the works for the 2016 educational program, a vital part of the annual event, visitors to the website can view presentations from the 2015 Show. We look forward to constantly updating the site to make it a valuable part of the NATO Show experience."

Currently, manufacturers and suppliers can use the site to apply for 2016 exhibit space. Registration for NATO Show 2016 and the networking events will be available on the site as well.

The NATO Show will be held April 19 – 21, 2016 at the Paris Hotel, Las Vegas, NV, USA. The Show is owned by the National Association of Tobacco Outlets and produced by ConvExx, an independent show organizer. Information regarding exhibit space or attendee registration can be obtained by contacting NATO Show Management, info@natoshow.com or calling 877-764-3976.

Still, a number of vaping manufacturers and advocates insisted the numbers do not accurately reflect what's really going on in the category, in part because companies such as Nielsen and MSA do not track internet and vape-shop sales.

nicnik, Jun 16, 2016

saint paul,mn,usa

How in the world would they obtain the total figures needed from all the B&M's? Seems to me that it's much easier just to use the tobacco companies' sale figures for their line of cig-a-likes. Also, can they get the sales figures from our Chinese suppliers since they will sell directly to an individual?

choochoogranny, Jun 16,
2016

Like x 1

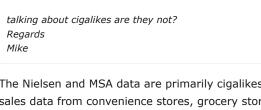

Cigalike sales being down is no surprise. Mostly because they suck but also there is much more awareness and widespread B&M's so skipping a cigalike for a tank system is much easier nowadays. I don't know anyone who exclusively uses cigalikes anymore. Back in 2013 when I started there were plenty of folks who stuck with them.

I guaranty that tobacco companies internally are quite nervous and things are not "rosy". Which is part of the problem we're facing right now...ugh

skoony said:

@nicnik When they refer to e-cigarettes they are

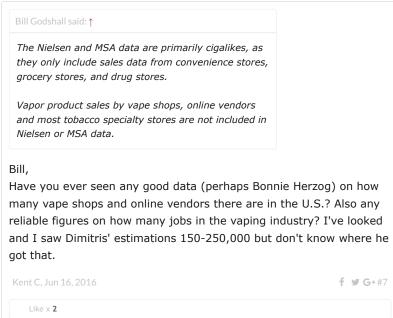

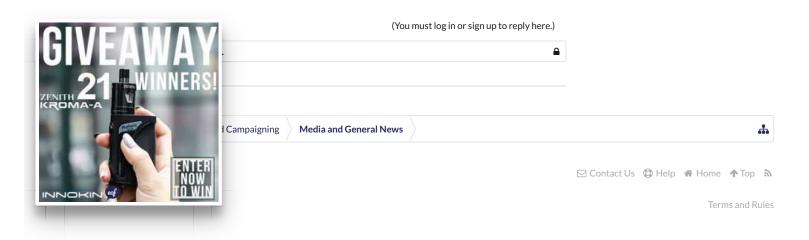

The Nielsen and MSA data are primarily cigalikes, as they only include sales data from convenience stores, grocery stores, and drug stores.

Vapor product sales by vape shops, online vendors and most tobacco specialty stores are not included in Nielsen or MSA data.

The National Association of Tobacco Outlets (NATO) and Local Ordinances Related to Tobacco Retailers

June 2015

In recent years, an organization known as the National Association of Tobacco Outlets (NATO) has become active in opposing local tobacco retailer licensing ordinances in California. While organizations representing retailers have opposed similar efforts in the past, NATO's recent actions are indicative of their newfound desire to be a strong presence on local policy issues in California. This document contains background information on NATO and the arguments they have made around the state. Additional resources on local ordinances related to tobacco retailers are available at www.center4tobaccopolicy.org/localpolicies-licensing.

What is NATO?

The National Association of Tobacco Outlets is a national trade association representing tobacco retailers around the country. NATO is headquartered in Minneapolis, Minnesota and has been active at the federal, state, and local levels. NATO's 131 members are a mix of tobacco retailers, manufacturers, wholesalers and farmer interests. Members are located in 30 states and Ontario, Canada with a heavy concentration in North Carolina, Virginia, and Florida. There are also concentrations of marketing firms holding memberships in New York and California. NATO seeks to influence governmental policy affecting tobacco retailers by educating legislators and advocating for the passage or defeat of legislation affecting the business interests of its members. NATO also hosts forums for retailers, manufacturers and farmers to discuss new methods of advertising and other issues of importance to the tobacco industry.

Where has NATO been active in opposing local policy efforts?

Historically, NATO has been active on the East Coast in states like Massachusetts, Virginia, Rhode Island, Illinois, Maryland and Vermont, but its reach has expanded to other states, including California. In February 2012, NATO launched an initiative to increase its impact across the country on local governmental policy affecting advertising in the tobacco retail environment. As part of this initiative, NATO asked its members for any and all information on local tobacco ordinances which impact their business. Since the launch, it has responded on behalf of hundreds of retail stores to local proposed regulations and is currently tracking and monitoring local and state issues such as tobacco retailer licensing.

In 2012, NATO filed a lawsuit in Federal Court to overturn a local ban on the sale of flavored noncigarette tobacco products and pricing/discount strategies in Providence, Rhode Island; the judge dismissed NATO's complaint and upheld the constitutionality of the flavored tobacco and

The Center for Tobacco Policy & Organizing | American Lung Association in California 1531 | Street, Suite 201, Sacramento, CA 95814 | Phone: (916) 554.5864 | Fax: (916) 442.8585 © 2015. California Department of Public Health. Funded under contract #14-10013.

pricing/discount ordinances. NATO appealed this decision to the U.S. Court of Appeals for the First Circuit, which unanimously affirmed the district court's ruling in September 2013.

In California, NATO has been tracking local ordinances in Sonoma County, Dublin, Gilroy, Morro Bay, and Lynwood. In 2012, NATO actively opposed licensing policies in several cities including Parlier (in Fresno County) and Lynwood (in Los Angeles County), where NATO collaborated with the Cigar Retailers Association to submit letters to the city council. More recently, NATO has been active in Berkeley, El Cerrito, the city of Sonoma, Sonoma County, and the city of San Diego.

Is there a connection between NATO and the tobacco industry?

The tobacco industry helped launch NATO when RJ Reynolds Tobacco and US Smokeless Tobacco Company each provided \$7,500 in startup dues in 2001. Records show that throughout the initial months of operation, RJ Reynolds received regular updates from NATO Executive Director Thomas Briant regarding strategies for recruiting local tobacco retailers as members and the organization's budget and expenditures. Many of the tobacco industry companies, such as Phillip Morris USA, RJ Reynolds Tobacco, and Lorillard are current members, as is NJOY, Inc., one of the leading electronic cigarette manufacturers. Furthermore, RJ Reynolds Tobacco, Lorillard and Phillip Morris USA (i.e., Altria Client Services) occupy three of the 24 seats on the NATO Board of Directors.

What arguments is NATO making in opposition to local policy efforts?

In letters to elected officials and comments at public hearings, NATO has made several arguments to delay, weaken or block the passage of tobacco retailer licensing ordinances or other restrictions like the ban on tobacco retailers within one thousand feet of schools. These arguments are listed below along with some information to counter those arguments. A more in-depth question and answer document, *Becoming a Policy Wonk on Local Tobacco Retailer Licensing*, is available from the Center at www.center4tobaccopolicy.org/localpolicies-licensing.

- 1. NATO Claim: Retailer licensing ordinances are discriminatory and will be devastating to business. A strong tobacco retailer licensing ordinance gives local communities new tools to enforce state laws prohibiting the sale of tobacco products to minors. It penalizes retailers caught selling to minors with appropriate penalties including suspending that retailer's license to sell tobacco. Law abiding retailers benefit when their competitors no longer rake in profits from illegal sales. A small annual fee of a couple of hundred dollars will not burden retailers who sell tobacco products. Cigarette sales generate more than \$500,000 in revenue for the average convenience store each year. And restricting the sale of tobacco products near schools makes sense because studies show that those retailers sell more tobacco illegally to kids than retailers located further from schools. However, these restrictions do not prevent retailers from selling other products and do not force them to close their business.
- 2. NATO Claim: Local policies that prohibit self-service displays of tobacco products do not make sense for adult only shops and inhibit the experience of premium cigar customers who prefer to personally select the product.
 - Self-service displays are an easy way for youth to access tobacco products. Certainly it is illegal for youth to be present in adult-only stores, but compliance is not ensured. For this reason it is important to ensure that a responsible person, such as a clerk, act as a barrier between tobacco products and our children. Furthermore, premium cigar customers will not miss out on the experience of holding and selecting the cigar of their choice, the only difference is that they do so with the assistance of a clerk.

- 3. NATO Claim: It is against the law to impose a ban on the use of coupons and non-sale distribution of tobacco products.
 - Distributing free and low cost tobacco products is a standard tactic of tobacco companies to recruit new young smokers and build and retain customer support and loyalty. It is called sampling or non-sale distribution. In California, tobacco companies regularly distribute their products or coupons at young adult, family and youth oriented events including bar nights, rodeos, festivals, and county fairs. California state law explicitly allows local jurisdictions to enact stricter restrictions than the state law on the sampling of tobacco products in order to limit the number of new youth smokers. Several cities, including Chico and San Francisco, have already adopted strong local policies.
- 4. NATO Claim: Banning the sale of individual cigars is unfair and unjustified. The purpose of requiring several little cigars and cigarillos to be packaged together is to limit the number of inexpensive, individually sold little cigars and cigarillos which are preferred by youth. The tobacco companies market these products to youth and youth are the predominant users. A local ordinance that prohibits the sale of individual little cigars and cigarillos, requiring them to be sold in quantities of at least two or more will increase the purchase price and help protect youth from the health dangers of using tobacco. This provision will not require retailers to repackage these products because they arrive from the manufacturer packaged in quantities of two or more and it is the retailer who breaks open these packages to sell the little cigars and cigarillos individually.
- 5. NATO Claim: Tobacco product and electronic cigarette advertising restrictions violate constitutional protections
 - Local laws that prohibit advertising or promotion of tobacco products on any advertising display in a publicly visible location have been challenged by NATO. The purpose of these regulations is to discourage illegal sales and furnishing of tobacco products to minors by restricting advertising that induces minors to buy or steal and use tobacco products. NATO claims that product advertising, including the advertising of tobacco products, constitutes "commercial speech" and is thus afforded First Amendment constitutional protections. Certainly, any city or county proposing advertising ordinances must be in compliance with federal law and First Amendment commercial speech principles. However, there are multiple options available in preventing and discouraging use of tobacco products by minors. Advertising and promotion of tobacco products may be regulated with time, place and manner restrictions, so long as the content of the ad itself is not regulated. Further, cities and counties may regulate the use and sale of tobacco products and may utilize zoning measures to do so.

March 1, 2016

Senator Terry Gerratana (Chairperson) Representative Matthew Ritter (Chairperson) Joint Public Health Committee Members State Capitol Hartford, CT 06106

Dear Chairperson Gerrantana, Chairperson Ritter, and Joint Public Health Committee Members:

As the Executive Director and legal counsel of the National Association of Tobacco Outlets, Inc. (NATO), a national retail tobacco trade association, I am submitting this letter on behalf the association and the member retail stores located in Connecticut. Please consider these comments as testimony in opposition to Senate Bill 290, which would increase the legal age to 21 for the purchase and sale of tobacco products and electronic smoking devices.

Raising the Age to 21 Will Not Prevent Minors From Obtaining Tobacco

Raising the legal age to 21 to purchase tobacco products as proposed in Senate Bill 290 would not solve the real underlying issue of reducing the health consequences related to underage youth tobacco usage. The real issue that Senate Bill 290 does not address is the longstanding problem of complicit adults obtaining and providing tobacco products to underage individuals. Such adults are known as "social sources" and the widespread prevalence of social sources is supported by a study published in the August, 2014 issue of the Journal of School Health which found that 86% of underage youth obtain tobacco products from older friends, adult age siblings, parents, and even strangers who purchase tobacco products for them.¹

Joint Public Health Committee Should Take a Leadership Role on Social Sources

As state elected officials, I urge the members of the Joint Public Health Committee to take a leadership position and work with advocates and retailers to combat the real source of tobacco products for minors. Until the issue of social sources is recognized as the main problem with underage access to tobacco products and appropriate steps are taken to reduce the availability of tobacco through complicit adults, Senate Bill 290 will only serve to penalize law-abiding retailers by reducing the sale of legal tobacco products to adults of legal age.

¹ Jones, S.E. and Caraballo, R.S., Usual Source of Cigarettes and Alcohol Among US High School Students, Journal of School Health, Vol 84, Issue 8, pp 493-501, August 2014. A chart depicting these results is attached.

Since Senate Bill 290 focuses on retailers and prohibits them from selling tobacco products to anyone under the age of 21, the bill is based on a false presumption that retailers routinely violate the law and sell tobacco products to youth under the age of 18. This false presumption should not serve as the basis for passing legislation aimed at protecting the health of underage individuals. Rather, NATO and its Connecticut retail members urge each of you to refocus these commendable legislative efforts by taking action to educate the public not to serve as a social source of tobacco products. The problem of social sources has been around as long as there have been teenagers and the retail community should not continue to be the target of legislation to further reduce youth tobacco use when retailers are rightfully part of the solution.

Connecticut Will Lose Excise Tax Revenue Annually if Senate Bill 290 is Enacted

Raising the legal age to 21 will shift the buying habits of adults who are 18, 19 and 20 years old to purchasing tobacco products over the Internet or traveling to Massachusetts, New York, or Rhode Island that have a legal age law of 18 years old. As a result, an impact of raising the legal age will be a loss of excise tax and sales tax revenue to the State of Connecticut.

For comparison purposes, the New Jersey Office of Legislative Services issued a fiscal impact analysis last year that found Senate Bill 602, which proposed 21 as the legal age to purchase tobacco in New Jersey, would reduce cigarette and tobacco excise tax and sales tax revenue by \$19 million annually. I acknowledge that Connecticut has approximately half the population of New Jersey, but Connecticut's current legal age is also 18 while New Jersey's legal age is higher at 19, which means a larger adult age group would be affected if Senate Bill 290 is enacted. For your reference, a copy of New Jersey fiscal impact analysis accompanies this letter.

Adults Should Be Allowed to Purchase and Use Legal Products

Since tobacco products are legal under federal and state law, the personal liberties of all adults, regardless of age, need to be considered because government and society impose responsibilities and duties on those who have reached the age of 18 such as voting, military service, marriage, payment of income taxes, health insurance requirements, and candidacy for public office. The magnitude of these rights and responsibilities demonstrate that 18 years is the age at which a person becomes an adult and they should be afforded the right to make decisions as an adult.

Again, we respectfully request that you not support Senate Bill 290 and in the alternative that other solutions be pursued to begin to solve the problem of social sources of tobacco products. Thank you for your time and consideration.

Sincerely,

National Association of Tobacco Outlets, Inc.

Thomas A. Briant

Executive Director and Legal Counsel

Odds & Ends From 2016 NATO Show

By Melissa Kress, Convenience Store News - 04/25/2016

LAS VEGAS — The National Association of Tobacco Outlets (NATO) held its fifth-annual trade show last week in Las Vegas. The 2016 NATO Show was also the last, as the association sharpens its focus on legislative and regulatory issues across the United States, but the event was chock full of insights, tidbits and product information for all tobacco retailers, including convenience stores.

YOU MAY ALSO LIKE

According to Bonnie Herzog, managing director of tobacco, beverage and convenience store research at Wells Fargo Securities LLC, the numbers continue to highlight the strength of Reynolds American Inc.'s Natural American Spirit (NAS) brand in the super premium cigarette segment. In the firm's Tobacco Talk surveys, retailers indicate they are anticipating The Altria Group Inc. and its operating company Philip Morris USA will enter the segment, either through "a tuckedin acquisition" or organically. According to Herzog, NAS is blazing a trail and Altria is taking notice.

Vaping for the Ages

Management Science Associates Inc. (MSA) took the pulse of vape shop owners and found that e-vapor products are not just for millennials. Don Burke, senior vice president, shared the results of the MSA survey of vape shop owners, which revealed that 88 percent of owners said consumers aged 21 to 30 are important to their business, and 92

percent said 31-to 40-year-olds are important. However, the percentages do not fall off as age increases. In fact, 53 percent of vape shop owners said consumers older than age 60 are important to their business. "It really speaks to the strength of the category," Burke noted.

You Know Best

Everyone has an opinion — some with facts and figures to back them up — on how to manage the e-vapor segment. But Chris Beaulier, director of retail operations for Cigaret Shopper in Brewer, Maine, said only the operator can know the right answer for their business. Whether they're the owner of a convenience store, tobacco outlet or vape shop, a retailer needs to do their own homework. "Research for future hot products, but at the same time don't fall in love with your inventory," he said, adding that retailers still need to offer traditional cigalikes because there are still customers looking for them.

Redefining Dual Use

When you talk dual use in the tobacco category, many people think of adult tobacco consumers switching between combustible cigarettes and electronic cigarettes, depending on the occasion. Yet another form of dual use is emerging in the e-vapor category. As Gal Cohen, head of scientific and regulatory affairs at PAX Labs Inc., explained, the company's JUUL presents an opportunity for vapers to vape in situations where using the larger mods/tanks are not possible — like in travel. JUUL has become a crossover product, available in roughly 11,000 convenience stores and 10 percent of all vape shops in the United States, reported Marty Young, director of strategic accounts at PAX Labs.

Meeting Barriers Head On

Boulder International Inc. has been in the market with its Aspen Air and Aspen Slim vapor products. Now, the company is ready to take the wrappers off its latest vapor product: the Boulder Rock vapor pen. The

SUPPLIERS & WHOLESALERS (/SUPPLIERS-WHOLESALERS) EVENTS & WEBCASTS (/EVENTS-WEBCASTS)

challenges that the e-vapor category faces in the convenience channel: ease and speed of transaction, and price point. The Rock has only two moving parts — making it a simpler vapor product for store associates to educate consumers about — and it has an attractive price for c-store shoppers, the company noted. The Rock will be hitting the channel in June.

The 2016 NATO Show took place April 19-21 at Paris Las Vegas.

PROHIBITING PRICE PROMOTIONS AND COUPON REDEMPTIONS BENEFIT PUBLIC HEALTH: RESPONSES TO MISLEADING NATO/SWEDISH MATCH ARGUMENTS

Public health efforts to protect youth from the tobacco industry in the point-of-sale environment are gaining momentum nationwide. The tobacco industry is organizing to oppose these efforts. For example, the National Association of Tobacco Outlets (NATO) and cigar and smokeless tobacco company Swedish Match recently launched a website for retailers with misleading arguments and information on the impact of local ordinances targeting the point of sale. The website is called Tobacco Ordinances – Take Another Look (TOTAL) and addresses policies related to price, flavored products, legal minimum sale age of 21, and others

Tobacco companies spend the vast majority of their total marketing on price-related strategies in the retail environment. Tobacco companies know that higher prices are likely to deter youth from starting or continuing to smoke. Since the industry needs to recruit new smokers to keep the tobacco business profitable, it is desperate to protect its ability to attract youth at the point of sale, regardless of the impact on the health and welfare of young people.

The industry's arguments do not withstand scrutiny. Below, we provide responses to each of its false claims.

Tobacco Companies Invest Heavily in Price Discounts and Promotional Efforts That Target Kids

- In 2014, the top 5 cigarette companies spent over \$6.7 billion on price discounts for cigarettes (e.g., off-invoice discounts, buy-downs and voluntary price reductions to reduce the price of cigarettes to consumers), accounting for nearly 80 percent of total cigarette company marketing expenditures and making it by far the largest marketing expense category. Cigarette companies spent an additional \$521 million on coupons.²
- In *U.S. v. Philip Morris* (the 2006 civil racketeering judgment against major cigarette manufacturers), the court specifically found that tobacco companies use strategic price reduction strategies such as coupons and multi-pack discounts to target young people.³
- More than 80 percent of convenience stores and more than half of supermarkets have special price promotions advertised inside; 42 percent of convenience stores have exterior price promotions.⁴

Tobacco Companies' Price Discounting Increases Youth Smoking

- The 2012 Surgeon General's Report, Preventing Tobacco Use Among Youth and Young Adults, reviewed
 the available research to date regarding tobacco tax increases and price discounting and concluded that:

 the industry's extensive use of price-reducing promotions has led to higher rates of tobacco use among
 young people than would have occurred in the absence of these promotions."5
- The use of value-added or coupon promotions makes cigarettes more affordable to kids and those with less financial resources. 6
- Coupons affect new users by encouraging them to smoke more, moving from the trial stage to being a regular smoker.⁷

Prohibiting Price Discounting and Coupon Redemption Would Reduce Youth Smoking

- According to the Surgeon General, "Because there is strong evidence that as the price of tobacco products increases, tobacco use decreases, especially among young people, then any actions that mitigate the impact of increased price and thus reduce the purchase price of tobacco can increase the initiation and level of use of tobacco products among young people."
- Restricting price-based promotions would reduce youth smoking. In *U.S. v. Philip Morris*, the judge found that "Defendants could significantly reduce adolescent smoking by. . .stopping all price related marketing (i.e., discounting and value added offers of cigarettes, especially in convenience stores" 10

Federal Law Enables Jurisdictions to Regulate Retail Sales

• The Federal Cigarette Labeling and Advertising Act was amended in 2009 to permit state and local governments to enact and enforce "bans or restrictions on the time, place, and manner of the advertising or promotion of any cigarettes." Courts have interpreted this provision to permit a local government

regulate the price at which cigarettes can be sold, including the prohibition of price promotions or discounts, and the prohibition of the redemption of coupons.¹¹

Prohibiting Price Promotions and Coupon Redemption Do Not Violate the First Amendment

- The First Amendment does not prevent state and local governments from regulating prices of tobacco
 products, nor does it prevent state and local governments from prohibiting discounting, promotional pricing,
 or prohibiting the redemption of coupons. No seller has a First Amendment right to promote or advertise a
 price unless that price can legally be charged.
- Redemption of coupons is not speech and is not protected by the First Amendment.¹²
- As long as these policies specifically refer to retail offers of discounted products or coupon redemption (the trading in of coupons or some discounting device in exchange for a lower price), rather than distribution or creating of coupons, then there is no violation of the First Amendment.

Retailers Are Not Harmed by Reduced Tobacco Sales

- Studies show that the number of convenience stores does not decline following tax increases, nor do
 declines in cigarette consumption have a negative impact on convenience store employment.
- Money spent on cigarettes in retail stores does not disappear from the area when smokers quit or cutback, but simply shifts to consumer spending on other products or services. For instance, a pack-a-day smoker who quits because of the price will save more than \$2,000 per year on cigarettes and could spend that money on other goods and services, including other products sold by convenience stores.
- Consumer demands are changing and stores need to adapt. A 2015 report commissioned by the National Association of Convenience Stores emphasized growth in healthy options in convenience stores and stated, "C-stores must understand that solely catering to their declining core audience [those purchasing cigarettes, beer, hot dogs, etc.] is not a growth strategy." 14

Education sessions timed for today's highly regulated tobacco arena

MOORPARK, CA, October 05, 2016—Tobacco Plus Expo (TPE), the most comprehensive business-to-business tobacco show in the U.S., announces that Thomas Briant, the Executive Director of the National Association of Tobacco Outlets (NATO), will be presenting two educational seminars at the 2017 TPE Show that will be held on January 25-26, 2017 at the Las Vegas Convention Center. These education sessions will help independent tobacco retailers learn about current local, state and federal legislation and regulations and how to become engaged and respond to these threats.

TPE 2017 has been expanded over previous years to now include a comprehensive conference session each day of the show—offering a vibrant learning platform and idea exchange for the industry. NATO Executive Director and TPE Advisory Board Member Thomas Briant will help guide session content in an effort to better prepare retailers and manufacturers for the challenging regulatory path ahead.

"TPE is proud to have the expert guidance of Tom Briant and we welcome the entire NATO team and its members/retailers to further strengthen and solidify TPE as the leading B2B show in the tobacco, vapor and alternative industries. The addition of our conference track is an important step in the show's evolution that will help educate retailers and manufacturers for a changing regulatory and competitive landscape," said Jason Carignan, chief marketing officer at Kretek, parent company of TPE.

Additionally, TPE will house the NATO headquarters on the expo floor, giving show attendees an on-site doorway to take their first steps towards mobilizing and helping to change the laws that will directly affect their businesses.

"Now that NATO recently elected to focus its efforts primarily on fighting local anti-tobacco initiatives, the TPE is an excellent foundation to communicate our message to the thousands of retailers that come to the show," stated Briant. "Together, we can prepare them with the tools and techniques necessary to succeed and thrive in this new tobacco era."

And that will be accomplished right along with the start of the new year, given TPE's purposeful timing. "The TPE, which is a growing part of Tobacco Media Group (TMG) and the Kretek family of companies is excited for an environment that brings retailers and manufacturers together in an industry of constant scrutiny and competitive pressure," said Mark Cassar, president and CEO at Kretek. "TPE 2017 is a place where tobacco businesses can truly do business; it's the first, best show of the year, created so the industry can best plan for the year ahead."

Battleground of Tobacco Regulation Remains Local

By Melissa Kress, Convenience Store News - 02/14/2017

ORLANDO, Fla. — Just six weeks into 2017 and tobacco legislation proposals continue to dominate local and state agendas across the country.

"Local ordinances are probably the greatest threat to the industry," according to Thomas Briant, executive director of the National Association of Tobacco Outlets (NATO). In fact, each year, the

Regulation Remains Local)

(mailto:?subject=Battleground of Tobacco Regulation Remains Local&body=I%20wanted%20to%20share tobacco-regulation-remains-local)

number of proposed ordinances and the severity of those ordinances increase, he noted.

Briant provided an update on tobacco legislation during the Convenience Distribution Association's (CDA) Convenience Distribution Marketplace 2017 event, which took place this week in Orlando.

While much of the legislative activity swirling around local municipalities is concentrated in three states — California, Massachusetts and Minnesota — tobacco regulation is not limited to those three states, and rather is spreading throughout the country.

As Briant explained, one of the major focuses of tobacco regulation currently is a call for flavor bans. Flavored cigarettes have been banned by the Food and Drug Administration (FDA) since the early days of The Family Smoking Prevention and Tobacco Control Act of 2009; however, flavors have not

been banned in other tobacco products (OTP) at the federal level. Notably, the FDA's final deeming rule — which went into effect Aug. 8 — did not address flavors for other products such as electronic cigarettes and cigars. But the deeming rule is just a foundational step for future federal regulations.

The push for flavor bans has picked up steam at the local level in Massachusetts, California, Minnesota, New York, New Jersey and Rhode Island.

In addition to taking aim at flavors, local lawmakers are targeting minimum package size for cigars, and cigarette and OTP taxes, Briant reported.

An additional threat to tobacco retailers is the limits on the number of retail licenses that some municipalities are putting in place. In some cases, the number of licenses is

less than the number of stores selling tobacco, effectively leaving some retailers out in the cold.

The Tobacco 21 push, which advocates for increasing the legal minimum age to buy tobacco products to 21, is gaining traction in many local communities, too. However, to date, only Hawaii and California have enacted statewide legislation.

To help fight the patchwork of local legislation, Briant advises retailers, wholesalers and distributors to get to know their local officials, invite them to visit their warehouse or store, explain to lawmakers the tobacco business model, and engage employees and customers.

"If tobacco sales go away, it will be hard for convenience stores to make up those dollars," the NATO executive director said, noting that the shift by antitobacco advocates has occurred over the past five years. Many anti-tobacco efforts are framed as an attempt to keep tobacco products out of the hands of underage consumers. However, Briant cited a recent study, which found that up to 80 percent of youths rely on social sources — older siblings, parents, strangers — to obtain tobacco products. The irony, he said, is that if flavor bans and other restrictions are put in place, lawmakers are not solving the problem.

"If the problem is social sources, then we need to focus our efforts on social sources; not banning the sale of a legal product," he explained.

2016 vs. 2017

Looking at the legislative landscape across the United States, Briant pointed out that in 2016, 21 states had bills proposed to raise cigarette/tobacco taxes. In the end, only four states adopted higher levies: California, Louisiana, Pennsylvania and West Virginia.

Last year was an election year, he pointed out, and generally elected officials do not vote to raise taxes during elections.

2017 could be a different story. To date, 11 states have already introduced bills to hike cigarette/tobacco taxes this year. And as for e-cigarettes, six states have taxes on the segment going into effect in 2017, and so far seven more states have proposed similar levies.

Additionally, 14 states already have measures on the table to increase the legal minimum buying age this year. North Dakota just recently rejected the move, Briant said.

The 2017 Convenience Distribution
Marketplace began Feb. 13 and
wrapped up Feb. 15 at the Hilton
Orlando. The annual event is
designed uniquely to bring
convenience distributors together with
their supplier partners in a flexible
business and networking
environment.

The Convenience Distribution
Association, formerly AWMA, is the trade organization working on behalf of convenience products distributors in the United States. Its distributor members represent more than \$92 billion in U.S convenience product sales, serving a wide variety of small retail formats. Associate members include leading convenience product manufacturers, brokers, retailers, suppliers and others allied to the industry.

National Association of Theatre Owners

The **National Association of Theatre Owners (NATO)** is a trade organization based in the <u>United States</u> whose members are the owners of <u>movie theaters</u>. Most major theater <u>chains</u> are members, as are many independent theater operators; collectively, they account for the operation of over 32,000 motion picture screens in all 50 U.S. states and 81 other countries.

NATO was founded in 1965 by the merger of the largest movie theater trade organizations, the Theater Owners of America and the Allied States Association of Motion Picture Exhibitors.^[1]

The long-running official magazine of NATO is Boxoffice; between 2001 and 2007, they also published In Focus. [2]

History

As the motion picture industry became larger, movie production companies began consolidating and controlling distribution. The largest producer, Famous Players-Lasky, joined and later merged with the largest distributor, Paramount (eventually becoming Paramount Pictures), and together they began block-booking in 1917, forcing theaters to buy mediocre films to get the good ones. Theaters banded together to bargain for better pricing, with 26 of the largest combining into First National Exhibitors Circuit—which went on to become a producer and distributor in its own right, before being bought by Warner Bros. By 1921, Paramount already owned 300 theaters, and other producers were catching up. Studios soon contracted with each other to keep first-runs inside the affiliated network, using this access to coerce independents into selling out.

In 1921, the first predecessor of NATO was founded, the largely affiliated Motion Picture Theater Owners of America (MPTOA), soon followed by the independent Allied States Association of Motion Picture Exhibitors (Allied), Unaffiliated Independent Motion Picture Exhibitors of America, National Independent Theatre Exhibitors, and more, to demand better pricing and access to first-runs. Unlike the others, the MPTOA embraced affiliated theaters, and soon became the largest organization.

During World War II, many theaters joined the new War Activities Committee, after the war becoming the Theatre Activities Committee and soon American Theatre Association (ATA), which strongly supported the antitrust case against the Big Five. A plan to merge with MPTOA, which strongly supported the studios, ran into friction, with many affiliated theaters leaving the ATA over its stance; conversely Allied, the largest purely-independent group, refused to join over the presence of affiliates. The merger went ahead in 1947, minus affiliates of Loews, RKO, and Warner Bros., and they became the Theater Owners of America (TOA) with about 10,000 theaters. [3]

After divestiture in the fallout of the 1948 *Paramount* decision, many formerly-affiliated theaters ended up joining either TOA or Allied. During the post-war period, theater revenue collapsed as television became widespread, even as film rental became more expensive, and thousands of theaters closed, particularly in city centers hard hit by <u>suburban flight</u>.^[4] Finally, in 1966 TOA and Allied merged into the National Association of Theatre Owners, largely based on TOA's structure but headed by Marshall Fine, former Allied chairman.

The 1970s were difficult for NATO; although the blockbuster The Godfather revitalized theater-going and revenue, in 1975 a new National Independent Theatre Exhibitors (NITE) came together to challenge NATO, [5][6] eventually numbering almost a thousand theaters, and governance reforms were pushed by members as well. When the reforms stalled, the entire California and Illinois chapters pulled out in 1977, along with many small chains around the nation. After 1980, many of the requested reforms were finally implemented, including a full-time president and a full-time lobbyist in Washington, as well as moving its headquarters from New York to Los Angeles; by the end of the decade, NITE had folded back into NATO, leaving only one dominant organization. [5]

The 1980s saw a relaxation of antitrust regulation and subsequent purchasing of many chains by distributors and large conglomerates, including 120 theaters by Paramount and Warner;^[7] by the end of the decade, consolidation left the top 10 owners in control of 55 percent of the industry. In the 1990s, theater growth exploded, and by 1999, movie screens peaked at 36,448, the vast majority of which were affiliated with NATO.^[4]

Events

CinemaCon (formerly ShoWest)

As ShoWest, the convention was formerly one of four major worldwide annual events owned by the Film Group unit of Nielsen Business Media before being sold in 2011 to e5 Global Media and operated exclusively by NATO.

In now-renamed CinemaCon in 2011, the convention is NATO's only official convention of theater owners controlled by the organization itself. The first gathering took place March 2011 at <u>Caesars Palace</u> in <u>Las Vegas</u>, <u>Nevada</u>, with the second held April 23–26, 2012, at the same venue.^[8]

CinemaCon is now a standalone <u>movie theater</u> industry <u>trade show</u> or exposition originally established by NATO in <u>1975</u>, usually held in Las Vegas in March.^[9]

Other Conventions

The remaining Nielsen Media event properties include <u>CineEurope</u> held in <u>Barcelona</u>, Spain in June, CineAsia held in early December in varying locations throughout Southeast Asia, and ShowEast, held in late October or early November in the Southeastern United States, usually somewhere in the Miami-Dade area.

Apart from CinemaCon, as presented on the website for the Nielsen Media Film Group, hosted by <u>Nielsen Business</u> Media,

The Nielsen Film Group events — CineEurope, ShowEast and CineAsia — are the only <u>conventions</u> and <u>tradeshows</u> dedicated to the needs of the movie theatre industry worldwide. Our events bring together the key decision makers from every major, regional and independent theatre circuit with the major International Film Distributors, as well as the manufacturers of products, services and technologies for the movie theatre industry. All of our events include screenings of upcoming films, product reel presentations, educational seminars, special events and awards galas.^[9]

According to Rick Lyman, of <u>The New York Times</u>, all four events are "the largest and most important gathering of theatre operators" in the world, at which "the theatrical distribution business takes stock of its problems, which have been legion, and assesses its future, always through the rosiest glasses available."^[10]

American Movie Awards

In 1980, NATO initiated the American Movie Awards, held at the Wilshire Theater, Beverly Hills, California, and broadcast on NBC, with the winners selected based on voting by theater patrons. [11] Various legal difficulties prevented the awards from being presented in 1981, and the event was discontinued after the 1982 awards due to competition from other awards shows.

CINEMACON 2018 STARTS IN

44 DAYS **09** HOURS **14** MINUTES

EXCLUSOWE IRICORYE CRISTIES ATION
AT CAESARS PALADOWAS PUBLICAS
REGUISTREPWOOW RATES

WELCOME TO CINEMACON,

the largest and most important gathering of movie theater owners from around the world.

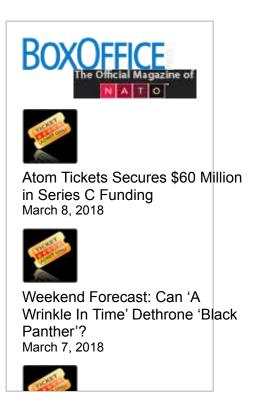

Since taking its first step in 2011, CinemaCon has evolved and grown to become the largest and most important gathering for the worldwide motion picture theater industry. CinemaCon is truly a global event attracting attendees from more than 80 countries.

On behalf of CinemaCon, the Official Convention of The National Association of Theatre Owners (NATO), we extend our sincerest appreciation and gratitude to the entire motion picture theater industry for helping to make the past six years

so successful. The excitement continues when CinemaCon returns to Caesars Palace in Las Vegas from 23-26 April 2018 for what is sure to be our biggest convention to date. Read More...

Question: The National Association of Theatre Owners is the largest exhi...

- 3. (15 pts) The National Association of Theatre Owners is the largest exhibition trade organization in the world, representing more than 26,000 movie screens in all 50 states and in more than 20 countries world; wide, its membership includes the largest cinema chains and hundreds of independent theatre owners. It publishes statistics concerning the movie sector of the economy. The file Flicks.xls contains data for 19 years on total US box office grosses (Sbillion), total number of admissions (billions), average US ticket price (S) and number of movie screens. Run the regression in which total US box office grosses (dependent variable) are predicted using all of the other variables (independent variables). (Assume normality)
 - a) Interpret each of the coefficients, and do they make "sense?"
 - b) Determine and interpret the range of plausible values for the change in box office grosses if the average ticket price were to be increased by \$1 (ceteris paribus). (Use a 96% confidence level) [Write all relevant numbers, interpretation, equation, etc... here yes, | repeated this here!]

Year	Grosses	Admissions	AvePrices	Screens
2005	8.99	1.40	6.41	37092
2004	9.5	1.53	6.21	36012
2003	9.49	1.57	6.03	35361
2002	9.52	1.63	5.8	35170
2001	8.41	1.49	5.65	34490

Manuscript Collection Descriptions

Home / MSS 1446 / National Association of Theatre Owners records

National Association of Theatre Owners records

Dates: 1946-1978

Administrative papers, correspondence, meeting minutes, convention reports, research data, promotional material, model bills and proposed legislation, testimony and speech transcripts, legal filings, press releases, and internal publications. Also included are records of the American Theatre Association (ATA), 1946–47; Theatre Owners of America (TOA), 1947–65; and Council of Motion Picture Organization (COMPO) which were precursors to the NATO organization. The collection provides primary source materials on motion picture history from the viewpoint of the movie theatre owner and operator.

- Extent: 50 boxes (25 linear ft.). -- 1 oversize box (1 linear ft.)
- Creator: National Association of Theatre Owners (U.S.). -- Council of Motion Picture Organizations (U.S.). -- Theatre Owners of America
- Call Number: MSS 1446
- Repository: L. Tom Perry Special Collections; Arts & Communications Archives; 1130 Harold B. Lee Library; Brigham Young University; Provo, Utah 84602; http://sc.lib.byu.edu/
- Access Restrictions: Open for public research.

Biographical Info:

Administrative History

The National Association of Theatre Owners (NATO) is a nationwide trade association of motion picture exhibitors representing 33 state and regional theatre organizations and more than 8,000 independent theatres and theatre circuits. It came into existence in 1966 from a merger of the Theatre Owners of America (TOA) and the Allied States Association of Motion Picture Exhibitors. NATO provides a united front in efforts to influence national and local legislation in favor of motion–picture theatre operators.

National Association of Theatre Owners

From Infogalactic: the planetary knowledge core

The **National Association of Theatre Owners** (**NATO**) is a trade organization based in the United States whose members are the owners of movie theaters. Most major theatre chains are members, as are many independent theatre operators; collectively, they account for the operation of over 32,000 motion picture screens in all 50 U.S. states and 81 other countries.

NATO was founded in 1965 by the merger of the largest movie theater trade organizations, the Theater Owners of America and the Allied States Association of Motion Picture Exhibitors.^[1]

The official magazine of NATO is Boxoffice.

Events

CinemaCon (formerly ShoWest)

As ShoWest, the convention was formerly one of four major worldwide annual events owned by the Film Group unit of Nielsen Business Media before being sold in 2011 to e5 Global Media and operated exclusively by NATO.

Renamed CinemaCon in 2011, the convention is NATO's only official convention of theater owners controlled by the organization itself. The first gathering took place March 2011 at Caesars Palace in Las Vegas, Nevada, with the second held April 23–26, 2012, at the same venue.^[2]

CinemaCon is now a standalone movie theater industry trade show or exposition originally established by NATO in 1975, usually held in Las Vegas in early March.^[3]

Other Conventions

The remaining Nielsen Media event properties include CineEurope held in Barcelona, Spain in June, CineAsia held in early December in varying locations throughout Southeast Asia, and ShowEast, held in late October or early November in the Southeastern United States, usually somewhere in the Miami-Dade area.

Apart from CinemaCon, as presented on the website for the Nielsen Media Film Group, hosted by Nielsen Business Media,

The Nielsen Film Group events — CineEurope, ShowEast and CineAsia — are the only conventions and tradeshows dedicated to the needs of the movie theatre industry worldwide. Our events bring together the key decision makers from every major, regional and independent theatre circuit with the major International Film Distributors, as well as the manufacturers of products, services and technologies for the movie theatre industry. All of our events include screenings of upcoming films, product reel presentations, educational seminars, special events and awards galas.^[3]

According to Rick Lyman, of *The New York Times*, all four events are "the largest and most important gathering of theatre operators" in the world, at which "the theatrical distribution business takes stock of its problems, which have been legion, and assesses its future, always through the rosiest glasses available." [4]

American Movie Awards

In 1980, NATO initiated the American Movie Awards, held at the Wilshire Theater, Beverly Hills, California, and broadcast on NBC, with the winners selected based on voting by theater patrons.^[5] Various legal difficulties prevented the awards from being presented in 1981, and the event was discontinued after the 1982 awards due to competition from other awards shows.

CinemaCon Awards 2011^[6]

- Cameron Diaz Female Star of the Year Award
- Vin Diesel Action Star of the Year Award

PRACTION **IMMERSIV AUDIO**

What to watch for when considering the latest in sound technology

by Mark Mayfield

In real life, our experience of sound is omnidirectional; it comes from all around us. Unlike our visual sense, we perceive sounds that happen anywhere within an imaginary sphere around our heads, whether our head is turned in the direction of the source or not. Other factors—such as the physical shape of our ears, the time arrival of the sound to each of our two ears, and cognitive processing—help determine the actual direction

of the sound source. This is what we call "localization."

With movies, our sense of localization is simulated and then re-created using loudspeakers and signal processing. In the earliest days of sound in cinema, the front of the screen acted as the only source of sound. Any sense of sound localization came from room acoustics and reflections from surfaces in the room coming in at random. There was no chance of re-creating an acoustical environment that matched the one seen on the screen. This all changed in the 1940s and '50s, when loudspeakers started appearing on the walls around the audience, in what was eventually dubbed "surround sound."

Surround sound, the experience of sound in multi-dimensions with realistic localization, has made great strides since then, but let's face it: just as a computer is still no match for the human brain, approximating our natural hearing mechanism with technology still has a long way to go before the experience feels completely realistic. The most recent leap in this effort is immersive audio.

WHAT IS IMMERSIVE AUDIO, REALLY?

Achieving a true immersive experience in a movie theater is not a trivial matter. At its most basic level, it's a two-stage process. First, the sonic reality is simulated and stored during the creation of the film in the post-production process. Then that simulation is reproduced in an acoustically neutral movie theater. Today, there is no single standard for accomplishing either of these stages, but one thing is certain: it takes a lot of sound sources to simulate any single acoustic scene, let alone the dozens of environments dictated by many changing scenes in a typical movie.

Today's immersive audio processes are either channel-based (5.1, 7.1, 11.1), object-based (each sound is a discrete digital object that is directed to one or more loudspeakers via "metadata" stored on the DCP), or a combination of both. All of these methods have a significant impact on the digital cinema B-chain.

Like any system, a cinema sound system is optimized only when all components or subsystems are designed to work together. To understand the B-chain

implications of immersive sound in cinema, it's helpful to break the system down to its three main sections: signal processing, amplification, and loudspeakers. For practical purposes, let's look at each of these sections in reverse order.

IMPLICATIONS FOR LOUDSPEAKERS

Since a truly immersive experience needs to simulate the seamless experience we hear in real environments, it's clear that many more loudspeakers are needed. For now, given the small area of a typical screen relative to the other three walls in a movie theater, three screen channel loudspeakers positioned at Left, Center, and Right seem to provide an adequate sense of localization for the action on an average-sized screen. In some cases, five (including Left-extra and Right-extra) or six

(a second layer of L, C, R) are used to simulate the sound as the filmmaker intended. For the surround loudspeakers lining

the other three walls, the

immersive experience requires many more loudspeakers that are more closely spaced, since a sound may be required to originate in just one loudspeaker or potentially all of them simultaneously. In some cases this may require two to three times the quantity of loudspeakers

compared to 5.1/7.1 systems. The goal is to minimize any perception of sound transitioning from one loudspeaker to the next; only a seamless transition will sustain the sense of total sonic immersion.

Achieving this sense of seamlessness also requires that the sound quality is absolutely consistent from loudspeaker to loudspeaker.

This depends on manufacturing processes of the loudspeaker itself, as well as intelligent application of signal processing that is specific to that loudspeaker model, as determined in a well-controlled laboratory environment. And

For most immersive formats, many more surround loudspeakers are mounted around the perimeter and sometimes ceiling of the typical cinema.

since each loudspeaker might receive a different sound channel or object, each loudspeaker must be individually wired.

Recognizing that we also hear sounds above our heads in nature, some immersive systems use loudspeakers suspended from the ceiling. While this might raise concerns of patron safety for some theater operators, safely suspending loudspeakers overhead is about as complicated as suspending large light fixtures. Some of the keys to safe overhead mounting include:

 First, consult a mechanical or structural engineer to determine mounting points capable of supporting the load with an appropriate safety factor.

- Be sure the loudspeaker enclosure itself is structurally capable of supporting its own weight with an appropriate safety factor. Multi-density fiber enclosures are great for side-wall and behind-screen loudspeakers, but overhead mounting calls for a well-built enclosure of multiple-layer plywood.
- Always use a secondary means of support, such as a safety cable attached to the loudspeaker and the mounting structure.

Conventional installation practice for behind-screen loudspeaker mounting involves placing them on a platform. This practice works well for any immersive sound installation, except when the format requires a second layer of Left, Center, and Right for "height" channels behind the screen. In this case, consider suspending the top layer; some manufacturers provide their most popular screen channel loudspeaker models in versions that are purpose-built for suspension from safe "hang points" in the ceiling. Again, this requires the input from a structural or mechanical engineer.

IMPLICATIONS FOR POWER AMPLIFIERS AND SIGNAL PROCESSING

Immersive audio also places greater demands on your power amplifier and signal processing decisions. Realizing that the number of surround loudspeakers could be double (or more) compared to traditional 5.1/7.1, and that each loudspeaker may need to deliver a discrete full-bandwidth sound source, it's obvious that each loudspeaker also requires its own channel of amplification. This means more individual power amplifiers, which also increases the amount of "rackspace" in an already shrinking projection booth. There may also be increased AC mains power requirements and cooling for these electronic devices.

Fortunately, power amplifier technology has advanced significantly in recent years, and there are some elegant ways of addressing these demands. Amplifier efficiency (the amount of power from the wall that's actually converted into power to make sound) has dramatically increased with new breed "class D" power amplifiers with switching power supplies. This translates into lower power requirements to the building, saving energy costs and infrastructure. Since they don't require large power transformers, these more efficient amplifiers can also be much smaller (which equals less rackspace) and produce far less heat (equals less cooling) compared to conventional amplifiers. These new designs also allow more channels to be packed into the physical chassis, enabling amplifier models to be built with four or even eight channels in a single chassis.

It's a fact of physics: to make bass, you need to move a lot of air. The most effective way is to use larger loudspeakers. For behind-screen loudspeakers, this is no problem since they can be hidden behind the screen. But to avoid breaking the sense of "immersion"

in the action happening on-screen, surround loudspeakers need to be as unobtrusive as possible. Fortunately, we can use the psychoacoustics of human hearing to our advantage; bass frequencies are naturally less "localizable"—it's hard to tell where they're coming from. The loudspeakers for bass frequencies can be physically located apart from the main surround loudspeakers. In fact, bass frequency content from multiple wall-mounted surround loudspeakers can be combined and produced by a smaller number of low-frequency loudspeakers mounted in less visually obvious locations. This is the main idea behind bass management, which is accomplished through the system's signal processing.

Getting the sound source from the DCP to the listener through an immersive system with up to 64 or more loudspeaker locations is a complicated feat of networking. Signal routing for most immersive formats requires sophisticated digital signal processing and significant processing power. Remember that each sound object may be delivered to any single loudspeaker or group of loudspeakers—or all of them simultaneously. Since we are still in the early days of immersive audio, there exists no single standard, and any system investment must consider future-proofing to the extent possible with today's products. Make sure that your system's signal processing supports any currently available immersive audio format and will be capable of supporting any future offerings.

Besides signal routing capabilities, achieving a seamless sound field objective also requires that the system's digital signal processing is able to correctly shape the sound to each specific loudspeaker model, using laboratory pre-sets. "In-situ" or automatic equalization that attempts to correct for room acoustic anomalies is simply no substitute for a well-designed loudspeaker that is lab-corrected for any performance anomalies and intrinsically delivers consistent power response into that room.

THE FUTURE OF IMMERSIVE AUDIO IN THE THEATER

Despite all of these new considerations, immersive audio has the potential to become the next big differentiator of the in-theater experience. The biggest obstacles at the moment are the lack of a commonly accepted industry-wide standard and the cost of implementation. Technology providers are working on the cost equation, and industry groups such as SMPTE are working to develop and promote standards. The two issues are related and the success or failure of any new cinema format depends on the support of filmmakers and studios to create great content that audiences want to experience in the movie theater.

Mark Mayfield is an experienced cinema audio expert and has worked with and consulted for many leading audio manufacturers including Bose, JBL Professional, and Eastern Acoustic Works. He is currently director of global marketing for Cinema at QSC. LLC.

OTAN NORTH ATLANTIC TREATY ORGANIZATION

The North Atlantic Treaty

Washington D.C. - 4 April 1949

04 Apr. 1949 - | Last updated: 21 Mar. 2016 15:09

The Parties to this Treaty reaffirm their faith in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all governments.

They are determined to safeguard the freedom, common heritage and civilisation of their peoples, founded on the principles of democracy, individual liberty and the rule of law. They seek to promote stability and well-being in the North Atlantic area.

They are resolved to unite their efforts for collective defence and for the preservation of peace and security. They therefore agree to this North Atlantic Treaty:

Article 1

The Parties undertake, as set forth in the Charter of the United Nations, to settle any international dispute in which they may be involved by peaceful means in such a manner that international peace and security and justice are not endangered, and to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes of the United Nations.

Article 2

The Parties will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and well-being. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them.

Article 3

In order more effectively to achieve the objectives of this Treaty, the Parties, separately and jointly, by means of continuous and effective self-help and mutual aid, will maintain and develop their individual and collective capacity to resist armed attack.

Article 4

The Parties will consult together whenever, in the opinion of any of them, the territorial integrity, political independence or security of any of the Parties is threatened.

Article 5

The Parties agree that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all and consequently they agree that, if such an armed attack occurs, each of them, in exercise of the right of individual or collective self-defence recognised by Article 51 of the Charter of the United Nations, will assist the Party or Parties so attacked by taking forthwith, individually and in concert with the other Parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area.

Any such armed attack and all measures taken as a result thereof shall immediately be reported to the Security Council. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

Article 6¹

For the purpose of Article 5, an armed attack on one or more of the Parties is deemed to include an armed attack:

- on the territory of any of the Parties in Europe or North America, on the Algerian Departments of France ², on the territory of or on the Islands under the jurisdiction of any of the Parties in the North Atlantic area north of the Tropic of Cancer;
- on the forces, vessels, or aircraft of any of the Parties, when in or over these territories or any other area in Europe in which occupation forces of any of the Parties were stationed on the date when the Treaty entered into force or the Mediterranean Sea or the North Atlantic area north of the Tropic of Cancer.

Article 7

This Treaty does not affect, and shall not be interpreted as affecting in any way the rights and obligations under the Charter of the Parties which are members of the United Nations, or the primary responsibility of the Security Council for the maintenance of international peace and

security.

Article 8

Each Party declares that none of the international engagements now in force between it and any other of the Parties or any third State is in conflict with the provisions of this Treaty, and undertakes not to enter into any international engagement in conflict with this Treaty.

Article 9

The Parties hereby establish a Council, on which each of them shall be represented, to consider matters concerning the implementation of this Treaty. The Council shall be so organised as to be able to meet promptly at any time. The Council shall set up such subsidiary bodies as may be necessary; in particular it shall establish immediately a defence committee which shall recommend measures for the implementation of Articles 3 and 5.

Article 10

The Parties may, by unanimous agreement, invite any other European State in a position to further the principles of this Treaty and to contribute to the security of the North Atlantic area to accede to this Treaty. Any State so invited may become a Party to the Treaty by depositing its instrument of accession with the Government of the United States of America. The Government of the United States of America will inform each of the Parties of the deposit of each such instrument of accession.

Article 11

This Treaty shall be ratified and its provisions carried out by the Parties in accordance with their respective constitutional processes. The instruments of ratification shall be deposited as soon as possible with the Government of the United States of America, which will notify all the other signatories of each deposit. The Treaty shall enter into force between the States which have ratified it as soon as the ratifications of the majority of the signatories, including the ratifications of Belgium, Canada, France, Luxembourg, the Netherlands, the United Kingdom and the United States, have been deposited and shall come into effect with respect to other States on the date of the deposit of their ratifications. (3)

Article 12

After the Treaty has been in force for ten years, or at any time thereafter, the Parties shall, if any of them so requests, consult together for the purpose of reviewing the Treaty, having regard for the factors then affecting peace and security in the North Atlantic area, including the development of universal as well as regional arrangements under the Charter of the United

Nations for the maintenance of international peace and security.

Article 13

After the Treaty has been in force for twenty years, any Party may cease to be a Party one year after its notice of denunciation has been given to the Government of the United States of America, which will inform the Governments of the other Parties of the deposit of each notice of denunciation.

Article 14

This Treaty, of which the English and French texts are equally authentic, shall be deposited in the archives of the Government of the United States of America. Duly certified copies will be transmitted by that Government to the Governments of other signatories.

- 1. The definition of the territories to which Article 5 applies was revised by Article 2 of the Protocol to the North Atlantic Treaty on the accession of Greece and Turkey signed on 22 October 1951.
- 2. On January 16, 1963, the North Atlantic Council noted that insofar as the former Algerian Departments of France were concerned, the relevant clauses of this Treaty had become inapplicable as from July 3, 1962.
- 3. The Treaty came into force on 24 August 1949, after the deposition of the ratifications of all signatory states.

International Organizations Before National Courts

This book investigates in a radically empirical way how national courts 'react' to disputes involving international organizations. Comprehensively analyzing both national courts' attitudes and techniques and underlying policy reasons, it first describes various legal approaches that result in adjudication or non-adjudication of disputes concerning international organizations. Secondly, it discusses policy issues pro and contra the adjudication of such disputes. It scrutinizes the rationale for immunizing international organizations from domestic litigation, especially the 'functional' need for immunity, and substantially debates the implications of a human rights-based right of access to a court on the immunizing of international organizations against the jurisdiction of national courts. The book finally identifies contemporary trends, seeking to ascertain whether a more flexible principle exempting certain types of disputes from domestic adjudication might substitute for the traditional immunity concept, which would simultaneously guarantee the functioning and independence of international organizations without impairing private parties' access to a fair dispute settlement procedure.

AUGUST REINISCH is Professor of Public International Law and EC Law at the University of Vienna Law School, and a lecturer at the Austrian Diplomatic Academy in Vienna and at the SAIS/Johns Hopkins University in Bologna.

CAMBRIDGE STUDIES IN INTERNATIONAL AND COMPARATIVE LAW

This series (established in 1946 by Professors Gutteridge, Hersch Lauterpacht and McNair) is a forum for studies of high quality in the fields of public and private international law and comparative law. Although these are distinct legal subdisciplines, developments since 1946 confirm their interrelationship. Comparative law is increasingly used as a tool in the making of law at national, regional and international levels. Private international law is increasingly affected by international conventions, and the issues faced by classical conflicts rules are increasingly dealt with by substantive harmonisation of law under international auspices. Mixed international arbitrations, especially those involving state economic activity, raise mixed questions of public and private international law. In many fields (such as the protection of human rights and democratic standards, investment guarantees, international criminal law) international and national systems interact. National constitutional arrangements relating to 'foreign affairs', and to the implementation of international norms, are a focus of attention.

Professor Sir Robert Jennings edited the series from 1981. Following his retirement as General Editor, an editorial board has been created and Cambridge University Press has recommitted itself to the series, affirming its broad scope.

The Board welcomes works of a theoretical or interdisciplinary character, and those focusing on new approaches to international or comparative law or conflicts of law. Studies of particular institutions or problems are equally welcome, as are translations of the best work published in other languages.

Preface

My interest in the subject-matter of this book arose rather incidentally when I attended the 1992 Centre for Studies and Research seminar of the Hague Academy of International Law on 'The External Debt'. It was my task there to focus on responsibility issues concerning debt rescheduling and the international debts crisis; one of the side issues that emerged from this investigation was whether international organizations could be made responsible or liable for part of the crisis and, if so, whether international or national for would be available to adjudicate such claims. As far as the latter were concerned, it was apparent that immunity from jurisdiction could impede the enforcement of liability. At first, I simply assumed that international organizations would enjoy a similar degree of immunity as states. After a second look, I realized, however, that most applicable international agreements and domestic statutes provided for functional and/or absolute immunity without making explicit what this difference implied. Later on, I found that some national courts, in particular, in the US and Italy, are in fact using a state immunity standard. It appeared that no predictions about any judicial outcomes could be readily made.

To some extent my book is an attempt to find answers to this puzzle. Its subject was soon broadened to include all the various types of reasoning employed by national courts when they have to decide whether or not they will hear cases involving international organizations. It also reflects my preference for 'real world' problems which should hopefully make it a useful companion for the practitioner. At the same time it will evidence my attempt to use strict systematic standards in classifying the types and rationales of judicial responses. If it thereby combines elements of a Common Law inspired case analysis with a more formal Civil Law approach, this was not wholly unintended.

Cambridge University Press 0521653266 - International Organizations before National Courts August Reinisch Frontmatter More information

XII PREFACE

I have attempted to make the study current to spring 1998. This inevitably implies that important later developments could not be covered.

August Reinisch

Cambridge University Press 0521653266 - International Organizations before National Courts August Reinisch Frontmatter More information

Acknowledgements

This study was submitted as 'Habilitationsschrift' to the Law Faculty of the University of Vienna in 1997. I wish to express my gratitude to all friends and colleagues at the Institute of International Law and International Relations in Vienna who helped me during the various stages of preparing it.

My main debt of gratitude goes to Professor Hanspeter Neuhold, who did not only take up the arduous task of presiding over the faculty committee which accepted my thesis in 1998, but who also gave me constant encouragement and practical advice, initially, when delimiting the scope of my study and, later, when confirming my decision to wind it up without venturing into news fields. Equally, I benefited from the wise counsel and valuable comments of Professors Karl Zemanek and Gerhard Hafner. Special mention must also be made of emeritus Professor Ignaz Seidl-Hohenveldern from whose unique experience in the particular subject-matter of my work I benefited when discussing with him various aspects of my work.

I also greatly appreciated the critical remarks and comments of numerous other professors at the University of Vienna among them: Ena-Marlies Bajons, Peter Böhm, Peter Fischer, Christoph Grabenwarter, Hans Hoyer, Theo Öhlinger, Walter Rechberger, and Hannes Tretter. I should also like to thank the external member of the faculty committee, Professor Martti Koskenniemi, whose 'deconstruction' of my policy approach did not only enliven the thesis defense before the faculty committee, but whose suggestions were most helpful and were thus incorporated in the final version.

As regards my work in Washington D.C., particular thanks must go to Professor Christoph Schreuer, with whom I had many discussions on the

xiii

Cambridge University Press 0521653266 - International Organizations before National Courts August Reinisch Frontmatter More information

XIV ACKNOWLEDGEMENTS

legal status of international organizations and whose hospitality at the Paul H. Nitze School of Advanced International Studies, Johns Hopkins University, enabled me to immediately start with my research. This work was further facilitated by the SAIS staff, all of whom I would like to thank, singling out Betty Glover for a particular recognition of her help.

I should also like to express my gratitude to Charlotte Ku for the American Society of International Law and to Michael Byers for the British Branch of the International Law Association for inviting me to present parts of my still unfinished study at Tillar House, Washington D.C., and at Jesus College, Oxford. These presentations and the ensuing debates helped me to develop and improve the arguments contained in this book.

My gratitude is further extended to Professor James Crawford, who carefully read my original manuscript, provided a wealth of highly valuable suggestions, which I have largely followed, and did not exasperate over my persistent objections to some others. I can only guess that his role in the decision of the Press Syndicate of Cambridge University Press to include my study in the International and Comparative Law Series was all but marginal. Likewise, I am indebted to the anonymous Reader A who also reviewed my draft manuscript for Cambridge University Press. His valuable comments helped to improve the book. I am particularly grateful to Finola O'Sullivan for preparing the publication of this book in a most efficient and professional manner. And my sincere admiration goes to Martin Gleeson, who helped me to avoid many technical imperfections of the text at the copy-editing stage.

Of course, all the errors and mistakes remain my exclusive responsibility. On the institutional side, I would like to express my gratitude to the Paul H. Nitze School of Advanced International Studies of Johns Hopkins University in Washington D.C. where I was invited to do research as a visiting scholar in 1995/96. The Erwin-Schrödinger-scholarship, which was awarded to me by the Austrian Science Fund, was a sine qua non for carrying out this research plan in the United States. Equally, the assistance of the Emil-Boral-Foundation has been instrumental in enabling me to complete my study.

On a personal level, I have relied very much on the support of my family. I am grateful to my mother and father, Herta and August Reinisch, who have enabled me to pursue my studies and who have always encouraged me in my work. Finally, and most importantly, I have to express my thanks to my wife, Elisabeth, for her support and patience with which she endured my passion for tracking down obscure case-

ACKNOWLEDGEMENTS

xv

quotations and cryptic footnotes which often made me less available for my family than I wished to be, especially during our 1995/96 stay in Washington D.C. This book is dedicated to her and to our wonderful children, Johanna and August, who have grown up splendidly, while I was writing, without having to worry about 'international organizations before national courts'.

UNITED STATES PATENT AND TRADEMARK OFFICE

Commissioner for Trademarks P.O. Box 1451 Alexandria,VA 22313-1451 www.uspto.gov

Feb 14, 2018

NOTICE OF PUBLICATION

1.	Serial No.:	2.	Mark:
	87-653,640		MOD
			(STANDARD CHARACTER MARK)

- 3. International Class(es): 42
- 4. Publication Date: Mar 6, 2018

Applicant: MOD Enterprises, Inc.

The mark of the application identified appears to be entitled to registration. The mark will, in accordance with Section 12(a) of the Trademark Act of 1946, as amended, be published in the *Official Gazette* on the date indicated above for the purpose of opposition by any person who believes he will be damaged by the registration of the mark. If no opposition is filed within the time specified by Section 13(a) of the Statute or by rules 2.101 or 2.102 of the Trademark Rules, the Commissioner of Patents and Trademarks may issue a notice of allowance pursuant to section 13(b) of the Statute.

Copies of the trademark portion of the *Official Gazette* containing the publication of the mark may be obtained from:

The Superintendent of Documents U.S. Government Printing Office PO Box 371954
Pittsburgh, PA 15250-7954
Phone: 202-512-1800

By direction of the Commissioner.

United States of America United States Patent and Trademark Office

Federales Cigars

Reg. No. 4,547,144

RC GADWAY, INC. (NEW HAMPSHIRE CORPORATION), DBA FEDERAL CIGAR

SUITE 23E

Registered June 10, 2014 953 ISLINGTON STREET

PORTSMOUNTH, NH 03801

Int. Cl.: 34

FOR: CIGARS, IN CLASS 34 (U.S. CLS. 2, 8, 9 AND 17).

TRADEMARK

FIRST USE 2-1-1921; IN COMMERCE 5-15-2011.

PRINCIPAL REGISTER

THE MARK CONSISTS OF STANDARD CHARACTERS WITHOUT CLAIM TO ANY PAR-

TICULAR FONT, STYLE, SIZE, OR COLOR.

NO CLAIM IS MADE TO THE EXCLUSIVE RIGHT TO USE "CIGARS", APART FROM THE

MARK AS SHOWN.

THE ENGLISH TRANSLATION OF THE WORD "FEDERALES" IN THE MARK IS "FEDERAL".

SER. NO. 86-084,529, FILED 10-7-2013.

ALLISON HOLTZ, EXAMINING ATTORNEY

Michelle K. Ze.

Deputy Director of the United States
Patent and Trademark Office

REQUIREMENTS TO MAINTAIN YOUR FEDERAL TRADEMARK REGISTRATION

WARNING: YOUR REGISTRATION WILL BE CANCELLED IF YOU DO NOT FILE THE DOCUMENTS BELOW DURING THE SPECIFIED TIME PERIODS.

Requirements in the First Ten Years* What and When to File:

First Filing Deadline: You must file a Declaration of Use (or Excusable Nonuse) between the 5th and 6th years after the registration date. See 15 U.S.C. §§1058, 1141k. If the declaration is accepted, the registration will continue in force for the remainder of the ten-year period, calculated from the registration date, unless cancelled by an order of the Commissioner for Trademarks or a federal court.

Second Filing Deadline: You must file a Declaration of Use (or Excusable Nonuse) **and** an Application for Renewal between the 9th and 10th years after the registration date.* See 15 U.S.C. §1059.

Requirements in Successive Ten-Year Periods* What and When to File:

You must file a Declaration of Use (or Excusable Nonuse) **and** an Application for Renewal between every 9th and 10th-year period, calculated from the registration date.*

Grace Period Filings*

The above documents will be accepted as timely if filed within six months after the deadlines listed above with the payment of an additional fee.

The United States Patent and Trademark Office (USPTO) will NOT send you any future notice or reminder of these filing requirements.

*ATTENTION MADRID PROTOCOL REGISTRANTS: The holder of an international registration with an extension of protection to the United States under the Madrid Protocol must timely file the Declarations of Use (or Excusable Nonuse) referenced above directly with the USPTO. The time periods for filing are based on the U.S. registration date (not the international registration date). The deadlines and grace periods for the Declarations of Use (or Excusable Nonuse) are identical to those for nationally issued registrations. See 15 U.S.C. §§1058, 1141k. However, owners of international registrations do not file renewal applications at the USPTO. Instead, the holder must file a renewal of the underlying international registration at the International Bureau of the World Intellectual Property Organization, under Article 7 of the Madrid Protocol, before the expiration of each ten-year term of protection, calculated from the date of the international registration. See 15 U.S.C. §1141j. For more information and renewal forms for the international registration, see http://www.wipo.int/madrid/en/.

NOTE: Fees and requirements for maintaining registrations are subject to change. Please check the USPTO website for further information. With the exception of renewal applications for registered extensions of protection, you can file the registration maintenance documents referenced above online at http://www.uspto.gov.

Michelle K. Len Director of the United States Patent and Trademark Office

REQUIREMENTS TO MAINTAIN YOUR FEDERAL TRADEMARK REGISTRATION

WARNING: YOUR REGISTRATION WILL BE CANCELLED IF YOU DO NOT FILE THE DOCUMENTS BELOW DURING THE SPECIFIED TIME PERIODS.

Requirements in the First Ten Years* What and When to File:

First Filing Deadline: You must file a Declaration of Use (or Excusable Nonuse) between the 5th and 6th years after the registration date. See 15 U.S.C. §§1058, 1141k. If the declaration is accepted, the registration will continue in force for the remainder of the ten-year period, calculated from the registration date, unless cancelled by an order of the Commissioner for Trademarks or a federal court.

Second Filing Deadline: You must file a Declaration of Use (or Excusable Nonuse) **and** an Application for Renewal between the 9th and 10th years after the registration date.* See 15 U.S.C. §1059.

Requirements in Successive Ten-Year Periods* What and When to File:

You must file a Declaration of Use (or Excusable Nonuse) **and** an Application for Renewal between every 9th and 10th-year period, calculated from the registration date.*

Grace Period Filings*

The above documents will be accepted as timely if filed within six months after the deadlines listed above with the payment of an additional fee.

*ATTENTION MADRID PROTOCOL REGISTRANTS: The holder of an international registration with an extension of protection to the United States under the Madrid Protocol must timely file the Declarations of Use (or Excusable Nonuse) referenced above directly with the United States Patent and Trademark Office (USPTO). The time periods for filing are based on the U.S. registration date (not the international registration date). The deadlines and grace periods for the Declarations of Use (or Excusable Nonuse) are identical to those for nationally issued registrations. See 15 U.S.C. §§1058, 1141k. However, owners of international registrations do not file renewal applications at the USPTO. Instead, the holder must file a renewal of the underlying international registration at the International Bureau of the World Intellectual Property Organization, under Article 7 of the Madrid Protocol, before the expiration of each ten-year term of protection, calculated from the date of the international registration. See 15 U.S.C. §1141j. For more information and renewal forms for the international registration, see http://www.wipo.int/madrid/en/.

NOTE: Fees and requirements for maintaining registrations are subject to change. Please check the USPTO website for further information. With the exception of renewal applications for registered extensions of protection, you can file the registration maintenance documents referenced above online at http://www.uspto.gov.

NOTE: A courtesy e-mail reminder of USPTO maintenance filing deadlines will be sent to trademark owners/holders who authorize e-mail communication and maintain a current e-mail address with the USPTO. To ensure that e-mail is authorized and your address is current, please use the Trademark Electronic Application System (TEAS) Correspondence Address and Change of Owner Address Forms available at http://www.uspto.gov.
