Pursuant to Rule 2.133(a) of the Trademark Rules of Practice, Applicant, with Opposer's consent, respectfully requests that the identification of goods for Application Serial No. 86/046,359 be amended by deleting the language "and hardware" and adding the language "None of the foregoing involving semiconductors, integrated circuits, programmable logic devices and microprocessors" at the end of the current identification in the application as shown below:

> "Computer software for network auditing and security monitoring, traffic analysis and reporting, usage, accounting and billing, fault isolation, event correlation, network performance and capacity planning, discovery and configuration management, compliance assurance, policy enforcement, forensic analysis and trending, application performance monitoring, service verification and analytic, and post-event troubleshooting and analysis. None of the foregoing involving semiconductors, integrated circuits, programmable logic devices and microprocessors." in International Class 009.

The proposed revised identification does not add to or broaden the originally filed identification of goods, but rather limits the original identification as permitted by Rule 2.71(a).

Opposer has consented to the above amendment as part of an agreement with Applicant. If the amendment is approved by the Board, the parties hereby stipulate that the subject opposition be dismissed with prejudice.
